

### 1 FEATURES

- Miniature package
- Low noise
- Low bias instability
- Excellent performance in vibration and shock environments
- 6 axes offered in same package
  - Electronically calibrated axis alignment
- Gyros based on Sensoror ButterflyGyro™
  - Single-crystal silicon technology
  - No intrinsic wear-out effects
- High stability accelerometers and inclinometers
- Separate "AUX" input for 24 bit ADC
- Insensitive to magnetic fields
- Full EMI compliance
- Digital interface, RS422
- Fully configurable
- Continuous self-diagnostics
- RoHS compatible

(38.6mm x 44.8mm x 21.5mm)

### 2 GENERAL DESCRIPTION

STIM300 is an IMU consisting of 3 high accuracy MEMS-based gyros, 3 high stability accelerometers and 3 high stability inclinometers in a miniature package. Each axis is factory-calibrated for bias, sensitivity and compensated for temperature effects to provide high-accuracy measurements in the temperature range  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . The unit runs off a single  $+5\text{V}$  supply.

STIM300 communicates via a standard high-level RS422 interface. The use of a 32-bit RISC ARM microcontroller provides flexibility in the configuration, like choice of output unit, sample rate, low pass filter  $-3\text{dB}$  frequency and RS422 bit-rate and protocol parameters. All configurable parameters can be defined when ordering or set by customer.

When STIM300 is powered up, it will perform an internal system check and synchronise the sensor channels. As an acknowledgement of the complete power-up sequence, it will provide special datagrams containing part number, serial number and configuration data. STIM300 will then automatically proceed to provide measurement data. Connect power and STIM300 will provide accurate measurements over the RS422 interface.

The measurement data is transmitted as packages of data on a fixed format (datagram) at intervals given by the sample rate together with a synchronization signal (TOV). The datagram is in binary coded format in order to have an efficient transfer of data. In addition to the measurement data itself, the datagram contains an identifier, status bytes and a 32 bit CRC (Cyclic Redundancy Check) to provide high degree of fault detection in the transmissions. The status bytes will flag any detected errors in the system. STIM300 can also be configured to transmit data only when triggered by a separate digital input signal (ExtTrig).

For more advanced users, the gyro may be put in Service Mode. In this mode all the configuration parameters can be intermediately or permanently changed by overwriting the current settings in the flash memory. In Service Mode the commands and responses are in a human readable format (ASCII); to enable the use of terminal-type software during typical product integration. Service Mode also provides the ability to perform single measurements, perform diagnostics and obtain a higher detail level of detected errors reported in the status bytes.

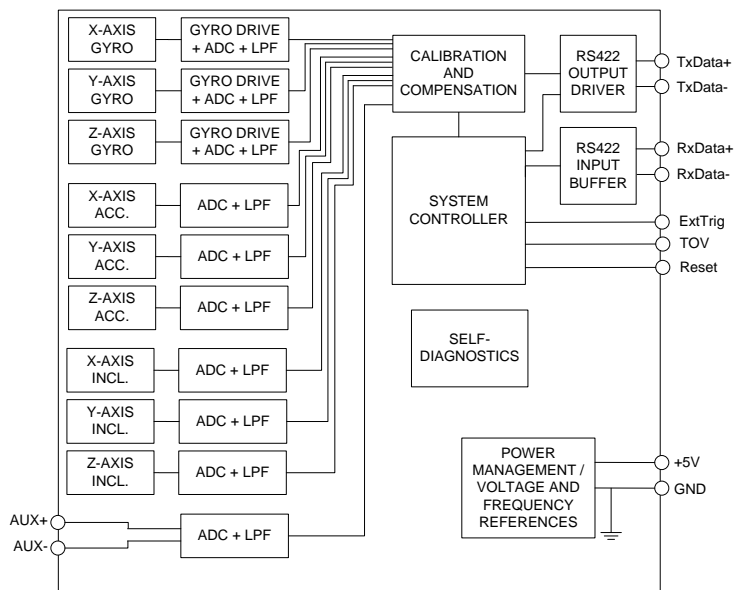

Figure 2-1: STIM300 FUNCTION BLOCK DIAGRAM

### 4 DEFINITIONS AND ABBREVIATIONS USED IN DOCUMENT

#### 4.1 Definitions

$g_0 = 9.80665 \text{ m/s}^2$  (standard gravity)

#### 4.2 Abbreviations

**Table 4-1: Abbreviations**

ABBREVIATION	FULL NAME
BCD	Binary Coded Decimal
BSL	Best Straight Line
CIC-filter	Cascaded Integrator-Comb filter
CR	Carriage Return
FS	Full-Scale
LF	Line Feed
LP filter	Low-Pass filter
tbd	to be defined
LSB	Least Significant Byte
MSB	Most Significant Byte
lsb	Least significant bit
TOV	Time of Validity

### 5 ABSOLUTE MAXIMUM RATINGS

Stresses beyond those listed in Table 5-1 may cause permanent damage to the device.

Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Table 5-1: Absolute maximum ratings**

Parameter	Rating	Comment
Mechanical shock	1 500g/0.5ms half-sine	Any direction. Ref: MIL STD-883G
ESD human body model	±2kV	Ref: JEDEC/ESDA JS-001
Storage temperature	-55°C to +90°C	Up to 1000 hours
VSUP to GND	-0.5 to +7V	
RxD+ or RxD- to GND	-0.3V to +7V	
RxD+ to RxD-	±6V	with 120Ω Line Termination = ON
TxD+ or TxD- to GND	-8V to +8V	
ExtTrig to GND	-0.3V to +7V	
TOV to GND	-0.3V to +7V	
NRST to GND	-0.3V to +7V	
AUX+ to AUX-	±6.5V	
AUX+ or AUX- to GND	±6.5V	
Chassis to GND	500V	
Helium sensitivity		Not to be exposed to helium concentrations higher than those normally found in the atmosphere

### 6 SPECIFICATIONS

**Table 6-1: Operating conditions**

Parameter	Conditions	Min	Nom	Max	Unit	Note
<b>INPUT RANGE, ANGULAR RATE</b>			±400		°/s	
<b>INPUT RANGE, ACCELERATION</b>			±10		g	1
<b>INPUT RANGE, INCLINATION</b>			±1.7		g	
<b>POWER SUPPLY</b>		4.5	5.0	5.5	V	2,3
<b>OPERATING TEMPERATURE</b>		-40		+85	°C	

Note 1: Other ranges available, ref. Table 6-5 (5g), Table 6-6 (30g) and Table 6-7 (80g)

Note 2: At supply voltages above 5.85V (nominal value) an internal voltage protection circuit will cut power and the unit will go into reset until the voltage is back within operating conditions.

Note 3: At supply voltages below 4.05V (nominal value) the unit will go into reset until the voltage is back within operating conditions. Due to power consumption being much lower in reset compared to normal operation, the series resistance between power source and STIM300 could give rise to an oscillating behaviour of the input voltage to the unit.

**Table 6-2: Functional specifications, general**

Parameter	Conditions	Min	Nom	Max	Unit	Note
<b>POWER CONSUMPTION</b> Power consumption			1.5	2	W	
<b>TIMING</b> Start-Up time after Power-On Time to transmit after Reset Time to valid data	T=+25°C			0.3	s	1

<b>EXTERNAL TRIGGER (ExtTrig PIN)</b> Logic levels Trigger Time between triggers Minimum “high” time before trigger, t <sub>ext_hi</sub> Minimum “low” time after trigger, t <sub>ext_lo</sub> Delay from external trigger to start of transmission, t <sub>ext_dl</sub> Pull-Up Resistor Latency	“high” “low”  Measurement unit: angular rate incremental angle average rate integrated angle  Minimum “high” time before trigger, t <sub>ext_hi</sub> Minimum “low” time after trigger, t <sub>ext_lo</sub> Delay from external trigger to start of transmission, t <sub>ext_dl</sub> Pull-Up Resistor Latency	2.3  0.5 0.5 0.5 0.5  250 250  40		0.6 Negative transition  127 127 65 8  86  1000	V V  ms ms ms ms  ns ns µs kΩ µs	   6,7 6,8 6,9 6,10  11 11  11

<b>TIME OF VALIDITY (TOV PIN)</b> Output configuration Internal Pull-Up Resistor to Vsup Sink capability TOV active level Minimum time of TOV, $t_{tov\_min}$ Delay from internal time-tick to TOV active, $t_{tov\_dl}$ Delay from TOV active (to start of transmission), $t_{tx\_dl}$		Open drain 10 Active "low" 50 1.2 6 80	kΩ mA  μs μs μs	12 12 12
<b>CHASSIS</b> Isolation resistance chassis to GND (pin 15)	500V	100	MΩ	

Note 1: Time from Power-On to start of datagram transmissions (starting with part-number datagram)

Note 2: Time from Reset release to start of datagram transmissions (starting with part-number datagram)

Note 3: Time from Power-On or Reset to the reset of the Start-Up bit (Bit 6 in the STATUS byte ref. Table 6-21).

During this period the output data should be regarded as non-valid.

Note 4: If a user-defined bit-rate larger than 1.5Mbit/s is used, the deviation may exceed the specification due to the resolution of the bit-rate generator, ref. section 10.5.1

Note 5: Other values can be configured, ref. Table 6-11

Note 6: If time between triggers is longer than 127ms, the sample counter will over-run

Note 7: Time between triggers should be carefully evaluated as long time between triggers in combination with high bandwidths could lead to issues related to folding. Similar for accelerometer and inclinometer outputs

Note 8: If time between triggers is longer than 8ms, an overload may occur in the incremental angle. An overload will be flagged in the status byte, ref. Table 6-21. Similar for accelerometer and inclinometer outputs

Note 9: If time between triggers is longer, the accuracy of average rate may also be reduced. Similar for accelerometer and inclinometer outputs

Note 10: If time between triggers is longer, the integrated angle may have wrapped several times and hence the change in angle from last sample will not be possible to calculate. Similar for accelerometer and inclinometer outputs

Note 11: For definition, ref. Figure 8-3

Note 12: For definition, ref. Figure 8-4 and Figure 8-5

	LP-filter -3dB = 131Hz		7.6		ms	6
	LP-filter -3dB = 66Hz		11		ms	6
	LP-filter -3dB = 33Hz		17		ms	6
	LP-filter -3dB = 16Hz		29		ms	6
Offset error	@25°C		±0.75		mV	2
Offset drift			±30		µV/°C	
Noise			60		µV rms	
Input impedance			Ref. Figure 6-4			

Note 1: Full-scale input voltage (FS):  $V_{IN} = (AUX+) - (AUX-)$

Note 2: Gain and offset error can be calibrated by changing the calibration coefficients, ref. 8.4 and 10.10

Note 3: Largest deviation from BSL (Best Straight Line) over the range specified

Note 4: Other values can be configured, ref. Table 6-11 and section 6.1.4.1

Note 5: Other values can be configured, ref. Table 6-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 6: Total delay to start of datagram transmission = group delay + 0.5ms +  $t_{fov\_dl}$  +  $t_{tx\_dl}$

Figure 6-4: AUX input circuitry

Table 6-10: Functional specifications, temperature

Parameter	Conditions	Min	Nom	Max	Unit	Note
Resolution	@25°C		0.0039		°C	1
Bias Accuracy			±5		°C	
Scale factor accuracy				±5		%
Sample Rate				2000	samples/s	2

Note 1: Temperature measured at gyros. Temperature calibrated at static condition and referred to ambient temperature.

Note 2: Other values can be configured, ref. Table 6-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

## 6.1 TYPICAL PERFORMANCE CHARACTERISTICS

### 6.1.1 GYRO CHARACTERISTICS

#### 6.1.1.1 Root Allan Variance of gyro

Figure 6-5: Typical Allan-Variance of gyro (400°/s gyro)

6.1.1.2 Initial bias drift of gyro

Figure 6-6: Typical normalized initial bias drift of gyro (400°/s gyro)

6.1.1.3 Bias drift over temperature

Figure 6-7: Typical Bias drift over temperature (400°/s gyro)

### 6.1.1.4 Frequency characteristics of gyros

**Figure 6-8: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 16Hz**

**Figure 6-9: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 33Hz**

**Figure 6-10: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 66Hz**

**Figure 6-11: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 131Hz**

**Figure 6-12: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 262Hz**

6.1.2 ACCELEROMETER CHARACTERISTICS

6.1.2.1 Root Allan Variance of accelerometer

Figure 6-13: Typical Allan-Variance of accelerometer (10g accelerometer)

6.1.2.2 Initial bias drift of accelerometer

Figure 6-14: Typical normalized initial bias drift of accelerometer (10g accelerometer)

### 6.1.2.3 Frequency characteristics of accelerometers

**Figure 6-15: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 16Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)**

**Figure 6-16: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 33Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)**

**Figure 6-17: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 66Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)**

**Figure 6-18: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 131Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)**

**Figure 6-19: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 262Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)**

6.1.3 INCLINOMETER CHARACTERISTICS

6.1.3.1 Root Allan Variance of inclinometer

Figure 6-20: Typical Allan-Variance of inclinometer

6.1.3.2 Initial bias drift of inclinometer

Figure 6-21: Typical normalized initial bias drift of inclinometer

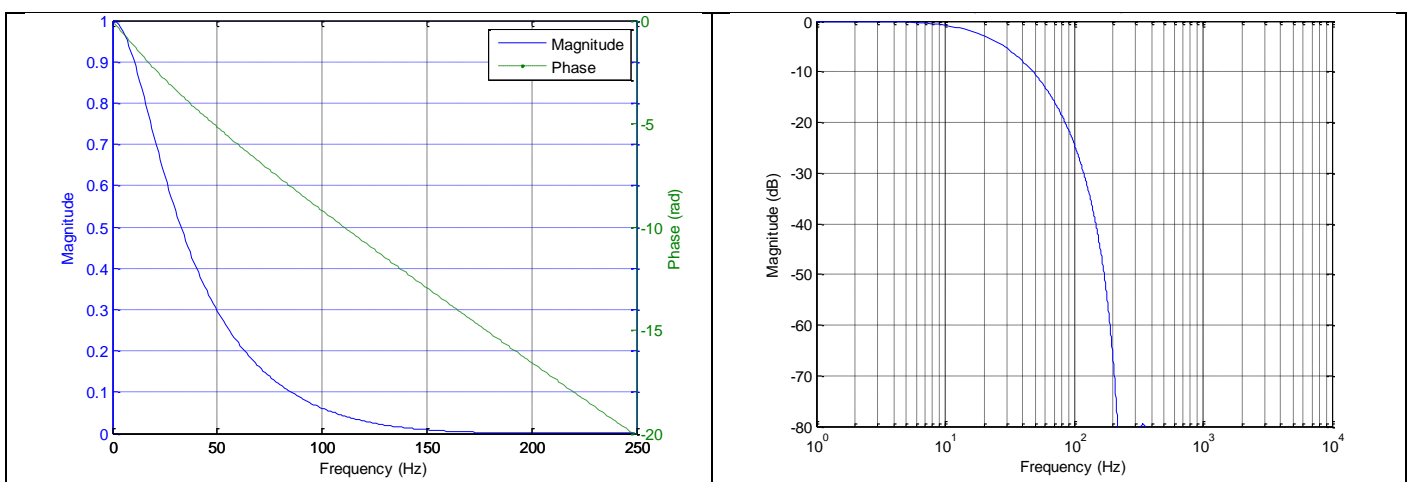

### 6.1.3.3 Frequency characteristics of inclinometers

**Figure 6-22: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 16Hz**

**Figure 6-23: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 33Hz**

**Figure 6-24: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 66Hz**

Figure 6-25: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 131Hz

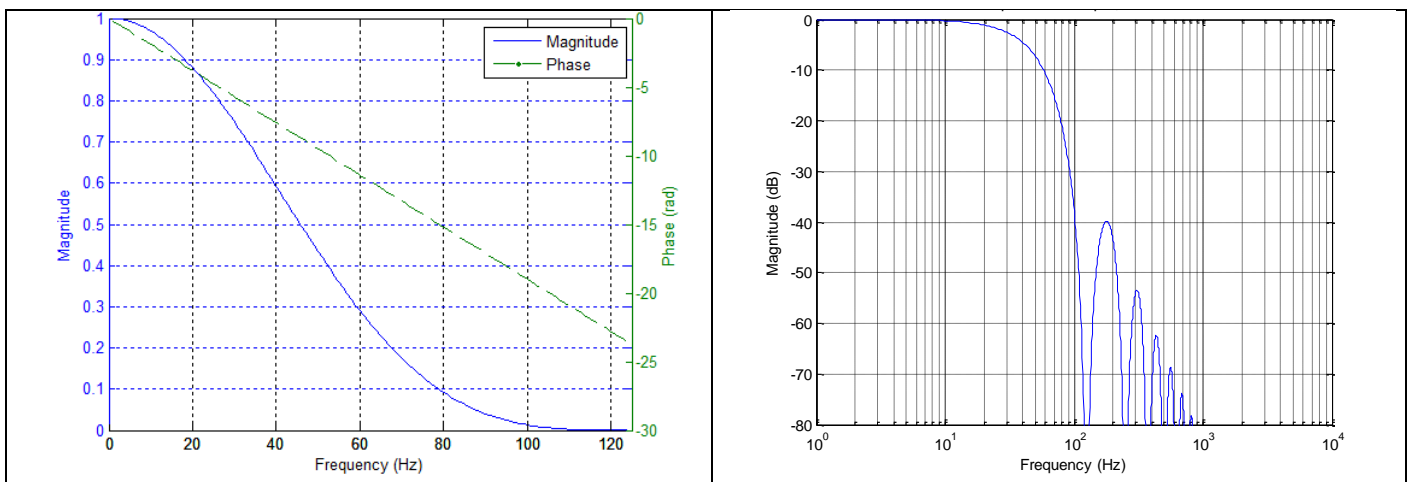

Figure 6-26: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 262Hz

**6.1.4 AUX CHARACTERISTICS**
**6.1.4.1 Frequency characteristics of AUX**

**Figure 6-27: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 16Hz**

**Figure 6-28: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 33Hz**

**Figure 6-29: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 66Hz**

**Figure 6-30: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 131Hz**

**Figure 6-31: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 262Hz**

### 6.2 Configurable parameters

**Table 6-11: Configurable parameters**

Parameter	Configurations	Comments
<b>SAMPLE RATE</b>	125 samples/s 250 samples/s 500 samples/s 1000 samples/s 2000 samples/s External trigger	Some limitations apply to the use of higher sample rates (>500 samples/s), dependent on selected bit-rate and datagram content, ref. Table 6-12
<b>LOW-PASS FILTER -3dB FREQUENCY</b>	16Hz 33Hz 66Hz 131Hz 262Hz	Filter settings are independent of sample rate. Low-pass filters are CIC type filters with linear phase response. Filter settings can be set individually for each axis.
<b>MEASUREMENT UNIT GYRO</b>	Angular rate [°/s] Incremental angle [°/sample] Average angular rate [°/s] Integrated angle [°]	
<b>MEASUREMENT UNIT ACCELEROMETER</b>	Acceleration [g] Incremental velocity [m/s/sample] Average acceleration [g]	
<b>MEASUREMENT UNIT INCLINOMETER</b>	Acceleration [g] Incremental velocity [m/s/sample] Average acceleration [g]	
<b>DATAGRAM</b>	Rate together with any combination of acceleration, inclination, temperature and AUX	
<b>DATAGRAM TERMINATION</b>	NONE <CR><LF>	
<b>RS422 BIT-RATE</b>	374400 bits/s 460800 bits/s 921600 bits/s 1843200 bits/s User-defined	Some limitations apply to the use of lower bit-rates (< 1843200 bits/s) dependent on sample rate and datagram content, ref. Table 6-12.  For user-defined bit-rates, see section 10.5
<b>RS422 PARITY</b>	None Odd Even	
<b>RS422 STOP BITS</b>	1 stop bit 2 stop bits	
<b>RS422 120Ω LINE TERMINATION</b>	OFF ON	

Refer to section 12 for information on how to configure STIM300 when ordering and to section 10 for information on how to reconfigure the unit in Service Mode.

Some datagrams are longer than the time between each sample at the lower bit-rate. Table 6-12 show the maximum bit-rates.

**Table 6-12: Maximum sample rate**

Datagram content	Number of transmitted bytes <sup>Note 1</sup>	374400 bits/s <sup>Note 2</sup>	460800 bits/s <sup>Note 2</sup>	921600 bits/s <sup>Note 2</sup>	1843200 bits/s <sup>Note 2</sup>
Rate	18	1000	2000	2000	2000
Rate and acceleration	28	1000	1000	2000	2000
Rate and inclination	28	1000	1000	2000	2000
Rate, acceleration and inclination	38	500	1000	2000	2000
Rate and temperature	25	1000	1000	2000	2000
Rate, acceleration and temperature	42	500	500	1000	2000
Rate, inclination and temperature	42	500	500	1000	2000
Rate, acceleration, inclination and temperature	59	500	500	1000	2000
Rate and AUX	22	1000	1000	2000	2000
Rate, acceleration and AUX	32	1000	1000	2000	2000
Rate, inclination and AUX	32	1000	1000	2000	2000
Rate, acceleration, inclination and AUX	42	500	500	1000	2000
Rate, temperature and AUX	29	1000	1000	2000	2000
Rate, acceleration, temperature and AUX	46	500	500	1000	2000
Rate, inclination, temperature and AUX	46	500	500	1000	2000
Rate, acceleration, inclination, temperature and AUX	63	500	500	1000	2000

Note 1: excluding<CR><LF> termination

Note 2: 10 bits/byte (=1 start bit, 8 data bits, no parity bit, 1 stop bit)

### 6.3 Datagram specifications

#### 6.3.1 Part Number datagram

**Table 6-13: Specification of the Part Number datagram**

Byte#	Bit#								Specification
	7	6	5	4	3	2	1	0	
0	1 1	0 0	1 1	1 1	0 0	0 0	0 1	1 1	Part Number datagram identifier: 0xB1 for datagrams without CR+LF termination 0xB3 for datagrams with CR+LF termination
1	0	0	0	0	P1 <sub>3</sub>	P1 <sub>2</sub>	P1 <sub>1</sub>	P1 <sub>0</sub>	Low nibble: 1.digit of part number
2	P2 <sub>3</sub>	P2 <sub>2</sub>	P2 <sub>1</sub>	P2 <sub>0</sub>	P3 <sub>3</sub>	P3 <sub>2</sub>	P3 <sub>1</sub>	P3 <sub>0</sub>	High nibble: 2.digit of part number Low nibble: 3.digit of part number
3	P4 <sub>3</sub>	P4 <sub>2</sub>	P4 <sub>1</sub>	P4 <sub>0</sub>	P5 <sub>3</sub>	P5 <sub>2</sub>	P5 <sub>1</sub>	P5 <sub>0</sub>	High nibble: 4.digit of part number Low nibble: 5.digit of part number
4	0	0	1	0	1	1	0	1	ASCII character "-" (0x2D)
5	P6 <sub>3</sub>	P6 <sub>2</sub>	P6 <sub>1</sub>	P6 <sub>0</sub>	P7 <sub>3</sub>	P7 <sub>2</sub>	P7 <sub>1</sub>	P7 <sub>0</sub>	High nibble: 6.digit of part number Low nibble: 7.digit of part number
6	P8 <sub>3</sub>	P8 <sub>2</sub>	P8 <sub>1</sub>	P8 <sub>0</sub>	P9 <sub>3</sub>	P9 <sub>2</sub>	P9 <sub>1</sub>	P9 <sub>0</sub>	High nibble: 8.digit of part number Low nibble: 9.digit of part number
7	P10 <sub>3</sub>	P10 <sub>2</sub>	P10 <sub>1</sub>	P10 <sub>0</sub>	P11 <sub>3</sub>	P11 <sub>2</sub>	P11 <sub>1</sub>	P11 <sub>0</sub>	High nibble: 10.digit of part number Low nibble: 11.digit of part number
8	0	0	1	0	1	1	0	1	ASCII character "-" (0x2D)
9	P12 <sub>3</sub>	P12 <sub>2</sub>	P12 <sub>1</sub>	P12 <sub>0</sub>	P13 <sub>3</sub>	P13 <sub>2</sub>	P13 <sub>1</sub>	P13 <sub>0</sub>	High nibble: 12.digit of part number Low nibble: 13.digit of part number
10	P14 <sub>3</sub>	P14 <sub>2</sub>	P14 <sub>1</sub>	P14 <sub>0</sub>	x	x	x	x	High nibble: 14.digit of part number
11	x	x	x	x	x	x	x	x	For future use
12	x	x	x	x	x	x	x	x	For future use
13	x	x	x	x	x	x	x	x	For future use
14	x	x	x	x	x	x	x	x	For future use
15	r <sub>7</sub>	r <sub>6</sub>	r <sub>5</sub>	r <sub>4</sub>	r <sub>3</sub>	r <sub>2</sub>	r <sub>1</sub>	r <sub>0</sub>	Part number revision. Content of byte represents the ASCII-character of the revision. Numbering sequence: "-", "A", "B", ..., "Z"
16	C <sub>31</sub>	C <sub>30</sub>	C <sub>29</sub>	C <sub>28</sub>	C <sub>27</sub>	C <sub>26</sub>	C <sub>25</sub>	C <sub>24</sub>	Cyclic Redundancy Check is performed on all preceding bytes, ref: 6.3.6
17	C <sub>23</sub>	C <sub>22</sub>	C <sub>21</sub>	C <sub>20</sub>	C <sub>19</sub>	C <sub>18</sub>	C <sub>17</sub>	C <sub>16</sub>	
18	C <sub>15</sub>	C <sub>14</sub>	C <sub>13</sub>	C <sub>12</sub>	C <sub>11</sub>	C <sub>10</sub>	C <sub>9</sub>	C <sub>8</sub>	
19	C <sub>7</sub>	C <sub>6</sub>	C <sub>5</sub>	C <sub>4</sub>	C <sub>3</sub>	C <sub>2</sub>	C <sub>1</sub>	C <sub>0</sub>	
(20)	0	0	0	0	1	1	0	1	<CR> If datagram termination has been selected
(21)	0	0	0	0	1	0	1	0	<LF> If datagram termination has been selected

### 6.3.2 Serial Number datagram

**Table 6-14: Specification of the Serial Number datagram**

Byte#	Bit#								Specification
	7	6	5	4	3	2	1	0	
0	1	0	1	1	0	1	0	1	<b>Serial Number datagram identifier:</b> 0xB5 for datagrams without CR+LF termination 0xB7 for datagrams with CR+LF termination
1	0	1	0	0	1	1	1	0	ASCII-character for letter "N"
2	S <sub>3</sub>	S <sub>2</sub>	S <sub>1</sub>	S <sub>0</sub>	S <sub>3</sub>	S <sub>2</sub>	S <sub>1</sub>	S <sub>0</sub>	High nibble: 1.digit (BCD) of serial number Low nibble: 2.digit (BCD) of serial number
3	S <sub>3</sub>	S <sub>2</sub>	S <sub>3</sub>	S <sub>0</sub>	S <sub>3</sub>	S <sub>2</sub>	S <sub>1</sub>	S <sub>0</sub>	High nibble: 3.digit (BCD) of serial number Low nibble: 4.digit (BCD) of serial number
4	S <sub>5</sub>	S <sub>2</sub>	S <sub>5</sub>	S <sub>0</sub>	S <sub>6</sub>	S <sub>2</sub>	S <sub>6</sub>	S <sub>0</sub>	High nibble: 5.digit (BCD) of serial number Low nibble: 6.digit (BCD) of serial number
5	S <sub>7</sub>	S <sub>7</sub>	S <sub>7</sub>	S <sub>0</sub>	S <sub>8</sub>	S <sub>2</sub>	S <sub>8</sub>	S <sub>0</sub>	High nibble: 7.digit (BCD) of serial number Low nibble: 8.digit (BCD) of serial number
6	S <sub>9</sub>	S <sub>9</sub>	S <sub>9</sub>	S <sub>0</sub>	S <sub>10</sub>	S <sub>10</sub>	S <sub>10</sub>	S <sub>0</sub>	High nibble: 9.digit (BCD) of serial number Low nibble: 10.digit (BCD) of serial number
7	S <sub>11</sub>	S <sub>11</sub>	S <sub>11</sub>	S <sub>0</sub>	S <sub>11</sub>	S <sub>11</sub>	S <sub>11</sub>	S <sub>0</sub>	High nibble: 11.digit (BCD) of serial number Low nibble: 12.digit (BCD) of serial number
8	S <sub>13</sub>	S <sub>13</sub>	S <sub>13</sub>	S <sub>0</sub>	S <sub>14</sub>	S <sub>14</sub>	S <sub>14</sub>	S <sub>0</sub>	High nibble: 13.digit (BCD) of serial number Low nibble: 14.digit (BCD) of serial number
9	x	x	x	x	x	x	x	x	For future use
10	x	x	x	x	x	x	x	x	For future use
11	x	x	x	x	x	x	x	x	For future use
12	x	x	x	x	x	x	x	x	For future use
13	x	x	x	x	x	x	x	x	For future use
14	x	x	x	x	x	x	x	x	For future use
15	x	x	x	x	x	x	x	x	For future use
16	C <sub>31</sub>	C <sub>30</sub>	C <sub>29</sub>	C <sub>28</sub>	C <sub>27</sub>	C <sub>26</sub>	C <sub>25</sub>	C <sub>24</sub>	Cyclic Redundancy Check is performed on all preceding bytes, ref: 6.3.6
17	C <sub>23</sub>	C <sub>22</sub>	C <sub>21</sub>	C <sub>20</sub>	C <sub>19</sub>	C <sub>18</sub>	C <sub>17</sub>	C <sub>16</sub>	
18	C <sub>15</sub>	C <sub>14</sub>	C <sub>13</sub>	C <sub>12</sub>	C <sub>11</sub>	C <sub>10</sub>	C <sub>9</sub>	C <sub>8</sub>	
19	C <sub>7</sub>	C <sub>6</sub>	C <sub>5</sub>	C <sub>4</sub>	C <sub>3</sub>	C <sub>2</sub>	C <sub>1</sub>	C <sub>0</sub>	
(20)	0	0	0	0	1	1	0	1	<CR> If datagram termination has been selected
(21)	0	0	0	0	1	0	1	0	<LF> If datagram termination has been selected

### 6.3.3 Configuration datagram

**Table 6-15: Specification of the Configuration datagram**

Byte#	Bit#								Specification
	7	6	5	4	3	2	1	0	
0	1	0	1	1	1	1	0	0	<b>Configuration datagram identifier:</b> 0xBC for datagrams without CR+LF termination 0xBD for datagrams with CR+LF termination
1	r <sub>7</sub>	r <sub>6</sub>	r <sub>5</sub>	r <sub>4</sub>	r <sub>3</sub>	r <sub>2</sub>	r <sub>1</sub>	r <sub>0</sub>	Part number revision. Content of byte represents the ASCII-character of the revision. Numbering sequence: “-”, “A”, “B”, ..., “Z”
2	f <sub>7</sub>	f <sub>6</sub>	f <sub>5</sub>	f <sub>4</sub>	f <sub>3</sub>	f <sub>2</sub>	f <sub>1</sub>	f <sub>0</sub>	Firmware revision. Numbering sequence: 0, 1, ..., 255
3	0	0	0	x	x	x	x	x	<b>System configuration, Byte 1:</b> Sample frequency = 125 samples/s

(64)	0	0	0	0	1	0	1	0	<LF> If datagram termination has been selected

Normal Mode datagrams with reduced content can be chosen at order or configured in Service Mode. Overview of available datagrams can be found in Table 6-19 and in section 12. When choosing a Normal mode datagram with reduced content, the Normal Mode datagram will be shorter. However the order of requested data will be transmitted as shown in Table 6-18. When selecting temperature in the datagram, only temperatures for the selected measurement-clusters will be transmitted, e.g. if gyro and inclinometer data have been chosen together with temperature, only temperatures for the gyros and inclinometers will be transmitted.

**Table 6-19: Normal Mode datagram identifiers**

Datagram content	Identifier
Rate	0x90
Rate and acceleration	0x91
Rate and inclination	0x92
Rate, acceleration and inclination	0x93
Rate and temperature	0x94
Rate, acceleration and temperature	0xA5
Rate, inclination and temperature	0xA6
Rate, acceleration, inclination and temperature	0xA7
Rate and AUX	0x98
Rate, acceleration and AUX	0x99
Rate, inclination and AUX	0x9A
Rate, acceleration, inclination and AUX	0x9B
Rate, temperature and AUX	0x9C
Rate, acceleration, temperature and AUX	0xAD
Rate, inclination, temperature and AUX	0xAE
Rate, acceleration, inclination, temperature and AUX	0xAF

### 6.3.6 Cyclic Redundancy Check (CRC)

At the end of all datagrams is a 32-bit Cyclic Redundancy Checksum. The CRC checksum enables the user to detect errors in the transfer of data from STIM300. The CRC is calculated using the following equation:

$$x^{32} + x^{26} + x^{23} + x^{22} + x^{16} + x^{12} + x^{11} + x^{10} + x^8 + x^7 + x^5 + x^4 + x^2 + x + 1$$

seed = 0xFFFFFFFF

All preceding data, including the datagram identifier, is included in the CRC.

The CRC-algorithm requires full sets of 32-bits (4 bytes). Several of the defined datagrams from STIM300 have a length which is not an integer number of 4 bytes. In order to have an efficient transmission of data and thereby avoid transmitting bytes with no meaningful content, dummy-byte(s) with content = 0x00 are added when the CRC of the last byte(s) is calculated.

Example: Datagram with ID=0xA7 (rate, acceleration, inclination and temperature) has been chosen. This datagram consists of 55 bytes prior to the CRC checksum. Hence this datagram consists of 13 sets of 32 bits + 3 bytes. In order to include the last 3 bytes in the CRC checksum, 1 byte = 0x00 is added, making the last data byte the least significant byte.

Table 6-20 lists the number of dummy-bytes needed to calculate the final CRC-checksum for the different datagrams in Normal Mode.

**Table 6-20: Number of dummy-bytes to be added for CRC-calculation**

<b>Datagram content</b>	<b>Identifier</b>	<b># dummy-bytes</b>
Part Number datagram	0xB1, 0xB3	0
Serial Number datagram	0xB5, 0xB7	0
Configuration datagram	0xBC, 0xBD	2
Extended Error Information datagram	0xBE, 0xBF	3
Rate	0x90	2
Rate and acceleration	0x91	0
Rate and inclination	0x92	0
Rate, acceleration and inclination	0x93	2
Rate and temperature	0x94	3
Rate, acceleration and temperature	0xA5	2
Rate, inclination and temperature	0xA6	2
Rate, acceleration, inclination and temperature	0xA7	1
Rate and AUX	0x98	2
Rate, acceleration and AUX	0x99	0
Rate, inclination and AUX	0x9A	0
Rate, acceleration, inclination and AUX	0x9B	2
Rate, temperature and AUX	0x9C	3
Rate, acceleration, temperature and AUX	0xAD	2
Rate, inclination, temperature and AUX	0xAE	2
Rate, acceleration, inclination, temperature and AUX	0xAF	1

#### 6.4 Status byte

**Table 6-21: Interpretation of bits in STATUS byte**

<b>Bit</b>	<b>STATUS bit information</b>	<b>Comment</b>
7	0=OK, 1=System integrity error	Bits 0-2 will flag the overload channel(s) Bits 0-2 will flag the error channel(s)
6	0=OK, 1=Start-Up	
5	0=OK, 1=Outside operating conditions	
4	0=OK, 1=Overload	
3	0=OK, 1=Error in measurement-channel	
2	0=OK, 1=Z-channel	
1	0=OK, 1=Y-channel	
0	0=OK, 1=X-channel (or AUX)	

Refer to section 8.6 for more information related to the self-diagnostics of STIM300.

### 7 MECHANICAL

Table 7-1: Mechanical specifications

Parameter	Conditions	Min	Nom	Max	Unit	Note
<b>HOUSING MATERIAL</b>		Aluminium, Alloy 6082-T6, DIN EN 754-2				
<b>SURFACE TREATMENT</b> Passivation		Surtec 650				1
<b>WEIGHT</b>		55			grams	
<b>VOLUME</b>		32.6 1.99			ccm cu in	
<b>DUST AND HUMIDITY CLASSIFICATION</b>		IP67				
<b>CONNECTOR</b> Type Number of pins Contact type		Micro-D 15 female				
<b>PLUG</b> Proposed plug to fit connector Proposed cover to fit plug	For best EMI performance	Axon MDA 2 15 P Axon micro-D EMI back shell				
<b>FIXATION BOLTS</b>  Recommended torque	Steel base Aluminium base	M4 ISO 4762 / DIN 912 3.5 3.0			Nm Nm	

Note 1: Hexavalent chromium free

#### 7.1 Mechanical dimensions

All dimensions are in mm.

Figure 7-1: Mechanical dimensions

Figure 7-2: Drilling pattern

Table 7-2: Nominal position of accelerometer mass-centres (ref. Figure 6-2 for reference definition)

Axis	X-offset <sup>1)</sup>	Y-offset <sup>1)</sup>	Z-offset <sup>1)</sup>
X	-33.4mm	-11.7mm	12.8mm
Y	-24.9mm	-5.2mm	16.0mm
Z	-24.0mm	-11.3mm	6.9mm

Note 1: Valid for rev.F and later. For rev.E, refer TS1524r16

### 7.2 Advice on mounting orientation

The gyros are sensitive to acceleration-forces in certain directions:

- X- and Y-gyros have their highest sensitivity to acceleration-forces in Z-direction
- Z-gyro has its highest sensitivity to acceleration-forces in Y-direction
- X-gyro has its lowest sensitivity to acceleration-forces in X-direction
- Y-gyro has its lowest sensitivity to acceleration-forces in Y-direction
- Z-gyro has its lowest sensitivity to acceleration-forces in Z-direction

### 7.3 Pin configuration

Figure 7-3: Pin configuration as seen from front of STIM300

Table 7-3: Pin descriptions

Pin#	Label	Type	Description
1	TxD-	OUTPUT	RS422 negative output
2	RxD-	INPUT	RS422 negative input
3	TST	OUTPUT	Test pin: Do not connect
4	TOV	OUTPUT	Time of Validity (if not in use, leave floating)
5	NRST	INPUT	Reset (if not in use, connect to VSUP or leave floating)
6	AUX_GND	INPUT	AUX signal ground (internally connected to Power ground)
7	AUX-	INPUT	AUX negative signal input
8	VSUP	SUPPLY	Power supply (+5V)
9	TxD+	OUTPUT	RS422 positive output
10	RxD+	INPUT	RS422 positive input
11	ExtTrig	INPUT	External trigger (if not in use, connect to VSUP or leave floating)
12	GND	INPUT	Test pin: Connect to ground (0V)
13	GND	INPUT	Test pin: Connect to ground (0V)
14	AUX+	INPUT	AUX positive signal input
15	GND	SUPPLY	Power ground (0V)

### 7.4 Definition of axes

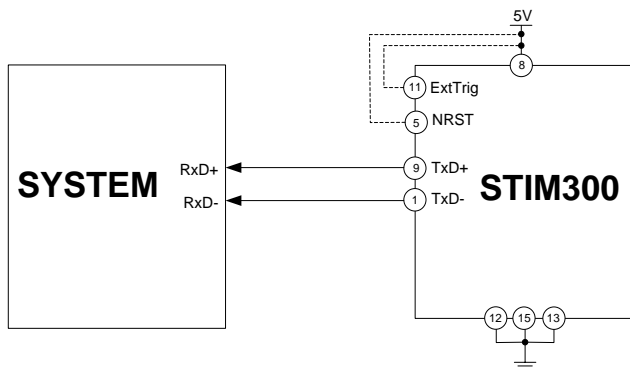

Figure 7-4: Definition of axes

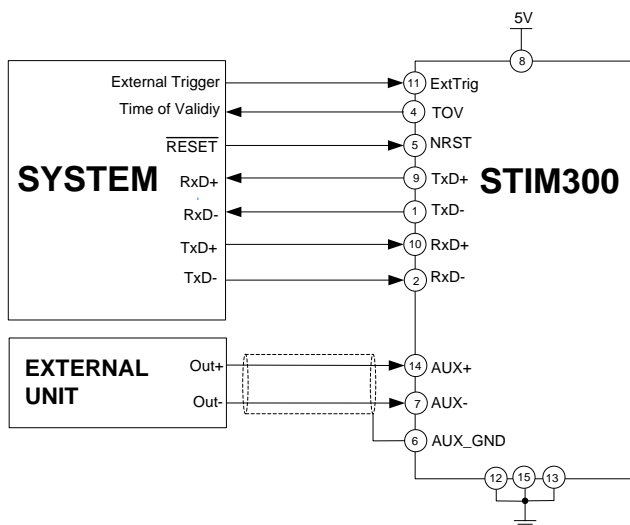

## 8 BASIC OPERATION

STIM300 is very simple to use. Unless having been configured with external trigger, the unit will start performing measurements and transmit the results over the RS422 interface without any need for additional signalling or set-up after power-on. Figure 8-1 shows the simplest connection set-up for STIM300.

**Figure 8-1: Transmit-Only Electrical Connection Diagram**

In order to take full advantage of all features of STIM300, the unit needs to be connected as shown in Figure 8-2. In this set-up the system can reset the unit without having to toggle power, the external trigger function can be utilized, configuration parameters can be changed and extended information like diagnostic information can be read from the device.

**Figure 8-2: Full Function Electrical Connection Diagram**

### 8.1 Reset

STIM300 has a separate reset pin (NRST) in order for the application to reset the unit without having to toggle power. The reset is active low and has an internal pull-up. Hence the input could be left floating if not in use.

The reset signal is routed to the reset of the microcontroller and effectively forces STIM300 into Init Mode (ref. Figure 8-6 and section 8.5.1).

### 8.2 External Trigger

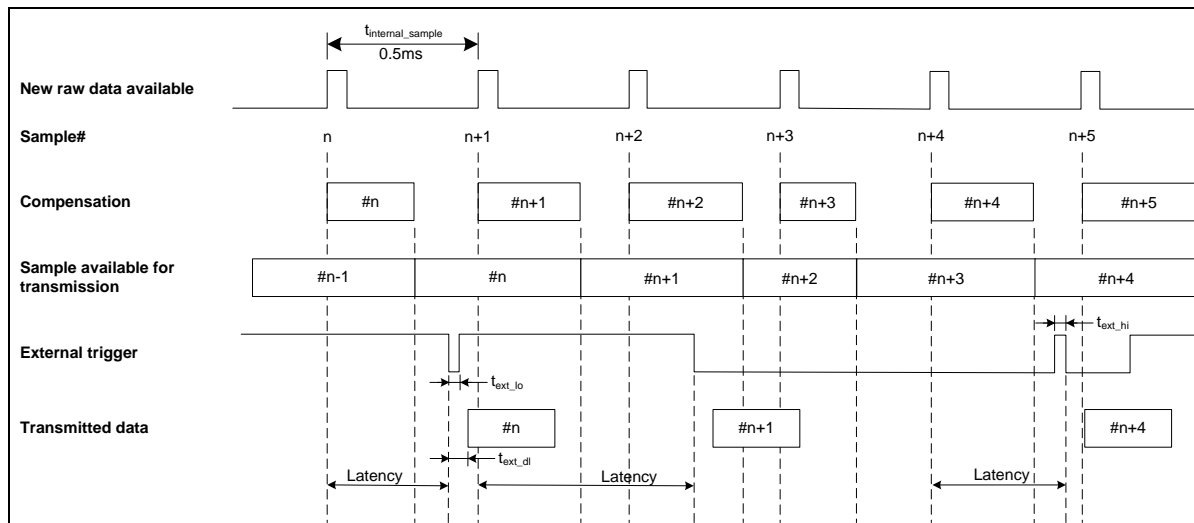

STIM300 has a separate digital input pin to be used when the unit has been configured to transmit only upon external trigger. The measurements themselves will be continuously running at the highest sample rate (2000 samples/s) in order to ensure shortest possible latency when a transmission is requested. The input is set to trigger on the falling edge of the input signal and will then transmit one datagram containing the result of the latest measurement.

The input has an internal pull-up. Hence the input could be left floating if not in use.

Note that when requesting one of the special Normal Mode datagrams, ref. section 9, the datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data. If several requests for special datagrams are issued prior to an external trigger, it will be the last requested special datagram that will be transmitted.

When STIM300 is in Init Mode (after Power on or Reset), it will transmit the 3 special datagrams as described in section 8.5.1 regardless of external trigger input.

The timing diagram is shown in Figure 8-3. Latency is the time between the moment at which the sample has been digitized + low pass-filtered and the receipt of the external trigger.

**Figure 8-3: Timing of external trigger**

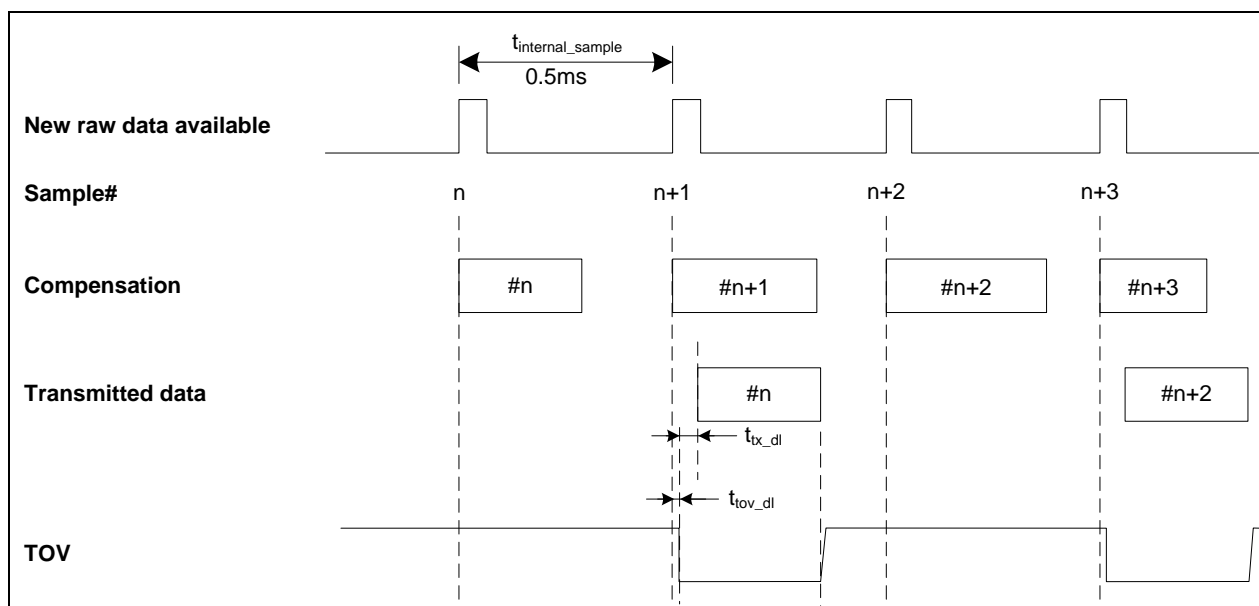

### 8.3 Time of Validity (TOV)

The TOV-output serves 2 purposes:

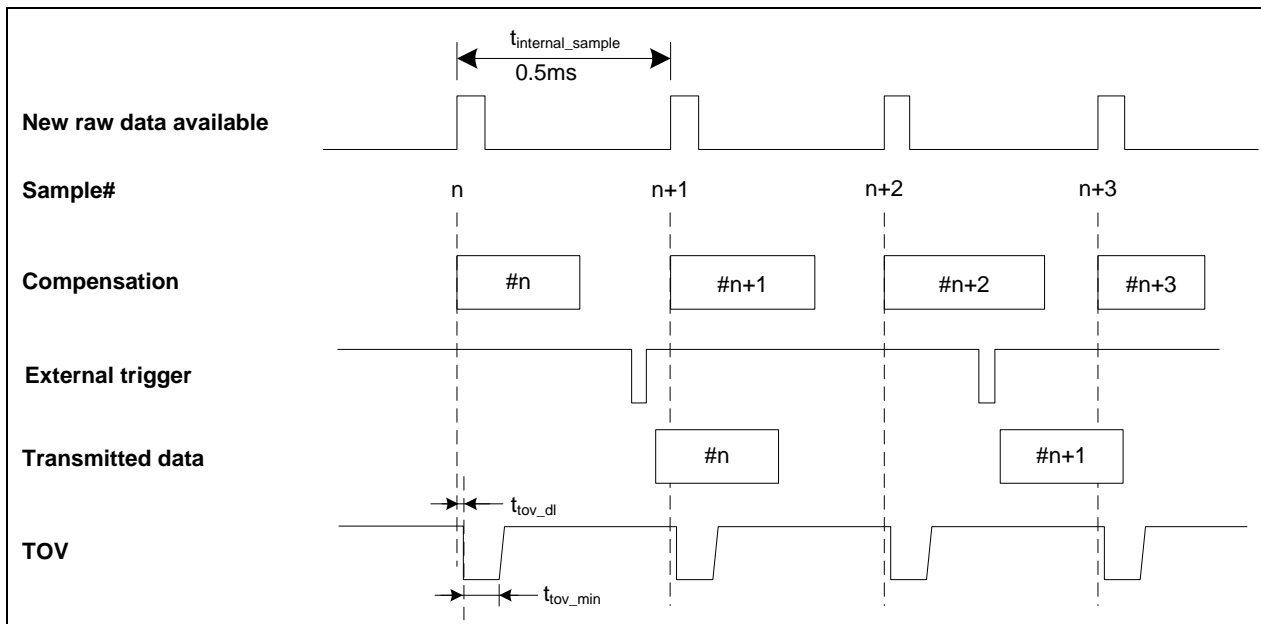

- Provide a synchronisation-signal derived from the internal clock of STIM300
- Provide means to signal when a datagram is being transmitted (NB: not when configured to external trigger)

The TOV falling edge occurs synchronous to the sample rate. The raising edge occurs after the last bit of the datagram has been transmitted.

Figure 8-4 and Figure 8-5 show the timing diagram of the TOV-output.

**Figure 8-4: Timing of TOV (example: sample rate = 1000samples/s)**

**Figure 8-5: Timing of TOV with external trigger**

### 8.4 Auxiliary input

STIM300 provides input in order to digitize an external signal. The digitizer is a 24 bit sigma-delta ADC. The AUX data (24 bits + status byte) can be included in the datagrams, ref. sections 12 and 10.4. A simple compensation of the AUX data is performed as shown in Equation 1. The AUX data will be low-pass filtered. The bandwidth can be changed in Service Mode, ref. section 10.8.

**Equation 1: AUX compensation algorithm:**

$$AUX\_Output = A * AUX\_Input + B$$

where A and B are coefficients that can be programmed by the user in SERVICEMODE (k (AUX COMP)-command)

### 8.5 Operating modes

The operating modes of STIM300 are shown in Figure 8-6:

**Figure 8-6: Operating modes**

### 8.5.1 Init Mode

Init Mode is entered after the following conditions:

- power on
- after an external reset
- when receiving a reset-command in Normal Mode
- when exiting to Init Mode from Service Mode.

In Init Mode the system waits for internal references to settle, resets and synchronizes the sensor channels and transmits three special datagrams containing part number, serial number and configuration data. Note that length and format of the special datagrams are different to the datagrams in Normal Mode.

The content and format of the Part Number datagram is specified in Table 6-13.

The content and format of the Serial Number datagram is specified in Table 6-14.

The content and format of the Configuration datagram is specified in Table 6-15.

After having transmitted the special Part Number, Serial Number and Configuration datagrams, STIM300 enters Normal Mode.

All these special datagrams can also be requested by commands in Normal Mode, ref. Section: 9.

### 8.5.2 Normal Mode

In Normal Mode STIM300 will constantly transmit sensor-data at the configured sample rate. The internal sample rate will always be at the maximum regardless of the transmitted sample rate.

STIM300 will continue to transmit data regardless of any errors reported in the STATUS-bytes (ref. Table 6-21). Hence the content of the STATUS-byte should continuously be examined.

The content of the Normal Mode datagram is specified in Table 6-18.

#### 8.5.2.1 Start-Up

When STIM300 enters Normal Mode from Init Mode, there will be a start-up period where STIM300 is stabilizing the gyros. During this period bit 6 is set in the STATUS-byte (ref. Table 6-21) to communicate its condition. Once stabilized, bit 6 will be cleared. During this period the output data should be regarded as non-valid.

There will not be any start-up period when STIM300 is exiting from Service Mode directly to Normal Mode.

### 8.5.2.2 Data output options and interpretation

The gyros in STIM300 measure angular rate [°/s], the accelerometers measure acceleration [g] and the inclinometers measure acceleration [g]. However, in order to make the STIM300 more versatile, a few simple functions are offered, ref. Table 8-1 and Table 8-2:

**Table 8-1: Implemented functions for gyro output units**

Function	Description of function	Equation	Output unit
Incremental	Adds all internal samples between two transmissions multiplied by the time between internal samples	$Incremental = \sum_{i=1}^n AngularRate_i \cdot \frac{1}{2000} s$ $n = 2000 / \text{sample rate}$	[°]
Average	Calculates the average of the internal samples between two transmissions	$Average = \frac{1}{n} \cdot \sum_{i=1}^n AngularRate_i$ $n = 2000 / \text{sample rate}$	[°/s]
Integrated	Adds all internal samples multiplied by the time between internal samples since start-up / last reset. Note that the result takes values in the interval [-4°, 4°] and will naturally wrap-around with no error-message indication in the Status-byte	$Integrated = \sum_{i=1}^n AngularRate_i \cdot \frac{1}{2000} s$ $n = \text{internal samples (at a rate of 2000 samples/s) since start-up or last reset}$	[°]

**Table 8-2: Implemented functions for accelerometer/inclinometer output units**

Function	Description of function	Equation	Output unit
Incremental	Adds all internal samples between two transmissions multiplied by the time between internal samples and converted to [m/s]	$Incremental = k_0 \cdot \sum_{i=1}^n Acceleration_i \cdot \frac{1}{2000} s$ $k_0 = 9.80665 \text{ m/s}^2/\text{g}$ $n = 2000 / \text{sample rate}$	[m/s]
Average	Calculates the average of the internal samples between two transmissions	$Average = \frac{1}{n} \cdot \sum_{i=1}^n Acceleration_i$ $n = 2000 / \text{sample rate}$	[g]
Integrated	Adds all internal samples multiplied by the time between internal samples since start-up / last reset. Note that the result takes values in a specific interval as described in 8.5.2.2.10 and 8.5.2.2.14 for accelerometer and inclinometer respectively and will naturally wrap-around with no error-message indication in the Status-byte	$Integrated = k_0 \cdot \sum_{i=1}^n Acceleration_i \cdot \frac{1}{2000} s$ $k_0 = 9.80665 \text{ m/s}^2/\text{g}$ $n = \text{internal samples (at a rate of 2000 samples/s) since start-up or last reset}$	[m/s]

#### 8.5.2.2.1 Delayed gyro output

The inherent group delay of the gyro-, accelerometer-, inclinometer- and AUX-signals are different, ref. Table 6-3, Table 6-4,

Table 6-8 and Table 6-9 respectively.

An option is available to delay the gyro signals by 5ms in order for the group delay of gyros, accelerometers and AUX to be similar. To enable this feature, select the gyro output-unit ≥ 8, ref. section 10.7 and 12.

### 8.5.2.2.2 Gyro output unit = Angular Rate

In the case of STIM300 being configured to output angular rate, Equation 2 and Figure 8-7 show how to convert to [°/s]. Note that the output data is represented as two's complement.

#### Equation 2: Converting output to [°/s]:

$$Output[^\circ/s] = \frac{(AR_1) \cdot 2^{16} + (AR_2) \cdot 2^8 + (AR_3)}{2^{14}}$$

where  $AR_1$  is the most significant byte of the 24bit output  
 $AR_2$  is the middle byte of the 24bit output  
 $AR_3$  is the least significant byte of the 24bit output

**Figure 8-7: Converting output bytes to [°/s]**

### 8.5.2.2.3 Gyro output unit = Incremental Angle

In the case of STIM300 being configured to output incremental angle per sample, the equations for conversion to [°/sample] can be found in Equation 3 and Figure 8-8. Note that the output data is represented as two's complement.

#### Equation 3: Converting output to [°/sample]

$$Output[^\circ/sample] = \frac{(IA_1) \cdot 2^{16} + (IA_2) \cdot 2^8 + (IA_3)}{2^{21}}$$

where  $IA_1$  is the most significant byte of the 24bit output  
 $IA_2$  is the middle byte of the 24bit output  
 $IA_3$  is the least significant byte of the 24bit output

**Figure 8-8: Converting output bytes to [°/sample]**

### 8.5.2.2.4 Gyro output unit = Average Angular Rate

In the case of STIM300 being configured to output average angular rate, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four previous internal samples.

Note that the configured low-pass filtering is performed prior to calculating the average.

Conversion to [°/s] is the same as for angular rate and is described in Equation 2.

### 8.5.2.2.5 Gyro output unit = Integrated Angle

In the case of STIM300 being configured to output integrated angle, the transmitted data will be the continuously integrated angle since power-on or reset. The integrated angle will be in the interval [-4°, 4°] and will naturally wrap-around with no error-message indication in the Status-byte.

Conversion to [°] is the same as for incremental angle and is described in Equation 3.

8.5.2.2.6 Gyro g-compensation

As the STIM300 also contains accelerometers and inclinometers, functionality has been implemented to provide means to compensate for the g-sensitivity for gyro scale-factor and/or bias.

In addition, a simple 1-pole low-pass filter can be switched in to apply additional filtering of the accelerometer-/inclinometer-signal prior to use in the compensation, ref: Figure 8-10. A simplified compensation-scheme can be found in Figure 8-9.

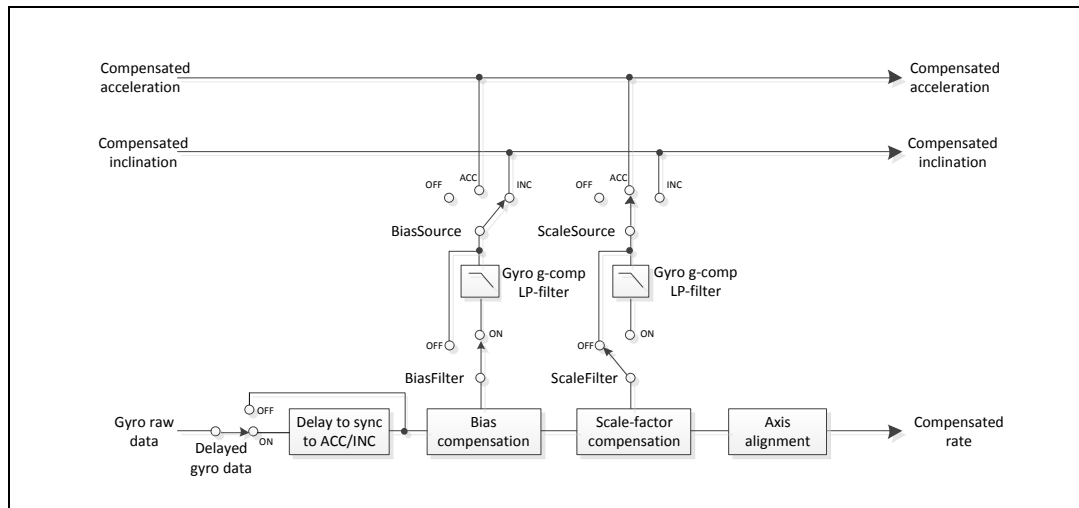

Figure 8-9: Simplified compensation-scheme for gyro g-compensation

Figure 8-10: Frequency characteristics of g-compensation low-pass filter for 0.001Hz, 0.01Hz and 5Hz settings

### 8.5.2.2.7 Accelerometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 4 and Figure 8-11 show how to do this. Note that the output data is represented as two's complement.

#### Equation 4: Converting output to [g]:

Range	Conversion:
2g	$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{21}}$
5g	$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{20}}$
10g	$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{19}}$
30g	$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{18}}$
80g	$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{16}}$

where  $ACC_1$  is the most significant byte of the 24bit output

$ACC_2$  is the middle byte of the 24bit output

$ACC_3$  is the least significant byte of the 24bit output

Figure 8-11: Converting output bytes to [g] (example is valid for 10g range)

### 8.5.2.2.8 Accelerometer output unit = Incremental Velocity

In the case of STIM300 being configured to output incremental velocity per sample, the equations for conversion to [m/s/sample] can be found in Equation 5 and Figure 8-12. Note that the output data is represented as two's complement.

#### Equation 5: Converting output to [m/s/sample]

Range	Conversion:
2g	$Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{24}}$
5g	$Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{23}}$
10g	$Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{22}}$
30g	$Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{21}}$
80g	$Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{19}}$

where  $IV_1$  is the most significant byte of the 24bit output

$IV_2$  is the middle byte of the 24bit output

$IV_3$  is the least significant byte of the 24bit output

Figure 8-12: Converting output bytes to [m/s/sample] (example is valid for 10g range)

### 8.5.2.2.9 Accelerometer output unit = Average Acceleration

In the case of STIM300 being configured to output average acceleration, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four internal samples.

Conversion to [g] is the same as for angular rate and is described in Equation 4.

### 8.5.2.2.10 Accelerometer output unit = Integrated Velocity

In the case of STIM300 being configured to output integrated velocity, the transmitted data will be the continuously integrated velocity since power-on or reset. The integrated velocity will be in the interval as shown in Table 8-3 and will naturally wrap-around with no error-message indication in the Status-byte.

**Table 8-3: Interval for integrated velocity**

Range	Interval:
2g	[-0.5m/s, 0.5m/s>
5g	[-1m/s, 1m/s>
10g	[-2m/s, 2m/s>
30g	[-4m/s, 4m/s>
80g	[-8m/s, 8m/s>

Conversion to [m/s] is the same as for incremental velocity and is described in Equation 5.

### 8.5.2.2.11 Inclinometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 6 and Figure 8-13 show how to do this. Note that the output data is represented as two's complement.

#### Equation 6: Converting output to [g]:

$$Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{22}}$$

where  $ACC_1$  is the most significant byte of the 24bit output

$ACC_2$  is the middle byte of the 24bit output

$ACC_3$  is the least significant byte of the 24bit output

**Figure 8-13: Converting output bytes to [g]**

### 8.5.2.2.12 Inclinometer output unit = Incremental Velocity

In the case of STIM300 being configured to output incremental velocity per sample, the equations for conversion to [m/s/sample] can be found in Equation 7 and Figure 8-14. Note that the output data is represented as two's complement.

#### Equation 7: Converting output to [m/s/sample]

$$Output[m/s/sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{25}}$$

where  $IV_1$  is the most significant byte of the 24bit output

$IV_2$  is the middle byte of the 24bit output

$IV_3$  is the least significant byte of the 24bit output

**Figure 8-14: Converting output bytes to [m/s/sample]****8.5.2.2.13      Inclinometer output unit = Average Acceleration**

In the case of STIM300 being configured to output average acceleration, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four internal samples.

Conversion to [g] is the same as for angular rate and is described in Equation 6.

**8.5.2.2.14      Inclinometer output unit = Integrated Velocity**

In the case of STIM300 being configured to output integrated velocity, the transmitted data will be the continuously integrated velocity since power-on or reset. The integrated velocity will be in the interval  $[0.25\text{m/s}, 0.25\text{m/s})$  and will naturally wrap-around with no error-message indication in the Status-byte.

Conversion to [m/s] is the same as for incremental velocity and is described in Equation 7.

### 8.5.2.2.15 Temperature

Temperature data for each axis is available in certain datagrams (ref. section 12).

Equation 8 and Figure 8-15 show how to convert to [°C]. Note that the output data is represented as two's complement.

#### Equation 8: Converting temperature data to [°C]

$$Output[°C] = \frac{(T_1) \cdot 2^8 + (T_2)}{2^8}$$

where  $T_1$  is the most significant byte of the 16bit output  
 $T_2$  is the least significant byte of the 16bit output

Figure 8-15: Converting temperature data to [°C]

### 8.5.2.2.16 AUX

In the case of STIM300 being configured to AUX-data, Equation 9 and Figure 8-11 show how to do this. Note that the output data is represented as two's complement.

#### Equation 9: Converting output to [V]:

$$Output[V] = \frac{(AUX_1) \cdot 2^{16} + (AUX_2) \cdot 2^8 + (AUX_3)}{2^{24}} \cdot 5V$$

where  $AUX_1$  is the most significant byte of the 24bit output  
 $AUX_2$  is the middle byte of the 24bit output  
 $AUX_3$  is the least significant byte of the 24bit output

Figure 8-16: Converting output bytes to [V]

### 8.5.2.2.17 Counter

Counter is continuously counting the internal samples (2000 samples/s). Counter is an un-signed single byte taking values in the interval [0 , 255]. The counter will naturally wrap-around with no error-message indication in the Status-byte.

### 8.5.2.2.18 Latency

To calculate the latency in [μs], refer to Equation 10 and Figure 8-17. Note that latency is an unsigned word.

#### Equation 10: Converting output to [μs]:

$$Output[\mu s] = (LT_1) \cdot 2^8 + (LT_2)$$

where  $LT_1$  is the most significant byte of the 16bit output  
 $LT_2$  is the least significant byte of the 16bit output

Figure 8-17: Converting output bytes to [μs]

### 8.5.3 Service Mode

In Service Mode the communication interface is human readable and hence the communication format (ASCII) supports the use of terminal-based software during the development phase, when the configuration of a device needs to be changed or during investigations into an observed problem.

When Service Mode is entered, STIM300 will respond with its configuration information (same as the response to the `i` (INFORMATION) command, ref: Figure 10-1).

A set of commands are available, ref. Section 10, enabling the user to change intermediately or permanently the configuration parameters, display latest measurement results, display higher details on error information and perform a full diagnostic of the unit.

In Service Mode the gyro measurements will still be running in the background, enabling to switch directly back to Normal Mode without the need for any stabilisation time of filters, etc. However the measurement data itself, when STIM300 is in Service Mode are not transmitted and therefore lost. By using the `a` (SINGLE-SHOT MEASUREMENT) command (ref. Section 10.2) it is possible to display single measurement results.

Exiting Service Mode can be done in several ways:

1. Using the external reset. This will force STIM300 into Init Mode. Be advised that during Init Mode, all the configuration parameters are loaded from flash. If any of the configuration parameters have been changed during the Service Mode session but not saved to flash, these changes will be overwritten by the content already stored in flash.
2. Using the `x` (EXIT) command. When using this command a parameter is required to decide whether the device should go to Init Mode or to Normal Mode. When exiting to Normal Mode, any of the changes made to the configuration parameters will still be valid. However, if not saved, the configuration parameters will be overwritten by the content already stored in flash at the next power-up or reset.

## 8.6 Self-diagnostics

STIM300 is continuously checking its internal status. The checks include:

- Check of internal references
- Check of sensors (error and overload)
- Check of internal temperatures
- Check of RAM and flash
- Check of supply voltage

A full diagnostic can be run to see the result of the individual checks by using the `c` (DIAGNOSTIC) command, ref. Section 10.3 in SERVICEMODE.

When an error situation is detected, the corresponding bit in the STATUS byte (ref. Table 6-21) will be set. If the sample-rate is set lower than 2000 samples/s, the STATUS byte will reflect the accumulated status of all the sub-samples between two data transmissions. The bits in the STATUS bytes are valid for the data in a single transmission and hence not latched.

Access to extended error registers containing accumulated error-information can be achieved either by using the Normal Mode-command "E" (EXTENDED ERROR INFORMATION DATAGRAM, ref. section 9.4 and Table 6-17) or the SERVICEMODE-command `i_e` (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 10.1).

The extended error registers are cleared at the following events:

- After the start-up phase, triggered by power-on or reset
- After transmission of Extended Error Information Datagram (ref. section 9.4)
- After use of SERVICEMODE-command "i e" (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 10.1)

### 9 COMMANDS IN NORMAL MODE

Several commands are available in Normal Mode, as listed in Table 9-1. Note that all commands in Normal Mode must be transmitted in upper case letters.

**Table 9-1 Available commands in Normal Mode**

Command	Short description
N	Transmits one Part Number datagram
I	Transmits one Serial Number datagram
C	Transmits one Configuration datagram
E	Transmits one Extended Error Information datagram
R	Resets the unit
SERVICEMODE	Enters Service Mode

**Table 9-2 List of special ASCII characters used in Normal Mode**

Char	Hex	Dec	Short description
<CR>	0x0D	13	“Carriage Return”: used as execution character for commands

No echo of received command characters or error messages will appear for these commands. Only at the receipt of the complete correct command, will STIM300 execute accordingly.

NB: if OUTPUT-UNIT is set to INCREMENTAL (ref. Section 10.7), the transmitted incremented value in the datagram following any of the requested special datagrams will NOT contain the incremental value since the last transmitted measurement. Hence the incremented value(s) occurring during the transmission of a special requested datagram will be lost.

#### 9.1 N (PART NUMBER DATAGRAM) command

General description: Requests transmission of a Part Number datagram (ref. Table 6-13).

**Table 9-3 : Available I (PART NUMBER DATAGRAM) command**

Syntax	Response
N<CR>	Transmits one Part Number datagram

The Part Number datagram will replace the next transmitted Normal Mode datagram. If the Part Number datagram is longer than the chosen Normal Mode datagram, the Part Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Part Number datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

#### 9.2 I (SERIAL NUMBER DATAGRAM) command

General description: Requests transmission of a Serial number datagram (ref. Table 6-14).

**Table 9-4 : Available I (SERIAL NUMBER DATAGRAM) command**

Syntax	Response
I<CR>	Transmits one Serial Number datagram

The Serial Number datagram will replace the next transmitted Normal Mode datagram. If the Serial Number datagram is longer than the chosen Normal Mode datagram, the Serial Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Serial Number datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

### 9.3 C (CONFIGURATION DATAGRAM) command

General description: Requests transmission of a Configuration datagram (ref. Table 6-15).

**Table 9-5: Available C (CONFIGURATION DATAGRAM) command**

Syntax	Response
C<CR>	Transmits one Configuration datagram

The Configuration datagram will replace the next transmitted Normal Mode datagram. If the Configuration datagram is longer than the chosen Normal Mode datagram, the Configuration datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Configuration datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

### 9.4 E (EXTENDED ERROR INFORMATION DATAGRAM) command

General description: Requests transmission of an Extended Error Information datagram (ref. Table 6-16). This datagram contains the accumulated detected errors (ref. section 8.6).

Once the Extended Error Information datagram has been transmitted, the error-registers are cleared.

**Table 9-6: Available E (EXTENDED ERROR INFORMATION) command**

Syntax	Response
E<CR>	Transmits one Extended Error Information datagram

The Extended Error Information datagram will replace the next transmitted Normal Mode datagram. If the Extended Error Information datagram is longer than the chosen Normal Mode datagram, the Extended Error Information datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Extended Error Information datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

### 9.5 R (RESET) command

General description: Force a Reset

**Table 9-7: Available R (RESET) command**

Syntax	Response
R<CR>	Resets the unit

### 9.6 SERVICEMODE command

General description : Enters Service Mode (ref. section 8.5.3).

**Table 9-8: Available SERVICEMODE command**

Syntax	Response
SERVICEMODE<CR>	Enters Service Mode

If the command is received during the transmission of a datagram, it will complete the transmission before entering Service Mode.

When entering Service Mode, the configuration and identification data of the device will be listed, as shown in Figure 9-1:

```

SERIAL NUMBER = N25580846002002

```

**Figure 9-1: Example of response from SERVICEMODE command**

### 10 COMMANDS IN SERVICE MODE

Several commands are available in Service Mode, as listed in Table 10-1. Note that all commands in Service Mode are case-sensitive (commands are lower case letters, whilst some parameters may be capital case letters).

**Table 10-1 Available commands in Service Mode**

Command	Short description
i	Lists specific information (e.g. serial number, configuration, error information)
a	Performs a single-shot measurement
c	Performs a diagnostic of the unit
d	Changes datagram format
t	Changes transmission parameters (e.g. bit-rate, data-length, stop-bits)
r	Turns line termination ON or OFF
u	Changes measurement output unit
f	Changes LP filter -3dB frequency
m	Changes sample rate
k	Changes coefficients of the AUX compensation algorithm
g	Changes the gyro g-compensation configuration for bias and scale factor
s	Saves configuration data
x	Exits Service Mode and returns to Normal Mode or Init Mode
z	Restore to factory settings
?	Help function on the available commands in Service Mode

**Table 10-2 List of special ASCII characters used in Service Mode**

Char	Hex	Dec	Short description
<BS>	0x08	8	"Back Space": deletes last received character (received since last <CR>)
<CR>	0x0D	13	"Carriage Return": typically used as execution character for commands
<SP>	0x20	32	"Space": used to separate command and first parameter
,	0x2C	44	"Comma": used to separate parameters in a command
'>'	0x3E	62	Used together with <CR> as: "Ready to receive new command"-prompt

When STIM300 is in Service Mode and ready to receive a new command, it will issue the special ASCII character <CR> followed by '>'. As some commands (e.g. SINGLE-SHOT MEASUREMENT-command) may respond with a varying number of lines, automated set-ups should look for the special prompt-sequence (<CR>+'>') before issuing a new command.

Received characters will be echoed. A command is decoded and executed when receiving the special ASCII character <CR>. <BS> ("back-space") is also recognised and will delete the last received character in the input buffer. The size of the input buffer is 80 characters. <BS> is valid for the characters received since last <CR>.

The command-character and first parameter (when applicable) are separated by a space (character 0x20). When there are more than one parameter to a command (e.g. TRANSMISSION PARAMETER-command), these must be separated by a comma (character 0x2C).

In the event of an unknown command, inconsistent syntax or incorrect value of parameter(s), STIM300 will respond with an error message. Error messages are on the format:

E<nnn><SP><Error description><CR>

where nnn is an error number

### 10.1 i (INFORMATION) command

General description: Lists various requested information about the device

**Table 10-3 : Available i (INFORMATION) commands**

Syntax	Response
i<CR>	Lists the product configuration and identification data
i<SP><cmd><CR>	Gives information about the specific parameter

**Table 10-4 : Allowed values for <cmd> parameter for i (INFORMATION) commands**

<cmd>	Result
s	Returns the serial number of the device
n	Returns the product name of the device
x	Returns the part number of the device
a	Returns the axis configuration of the device
p	Returns the FW configuration and revision of the device
m	Returns the sample rate of the device
f	Returns the LP filter -3dB frequency for each axis
d	Returns the datagram format
t	Returns the transmission parameters of the device
r	Returns the line termination (ON or OFF)
u	Returns the output units of the device
g	Returns the configuration of the gyro g-compensation
k	Returns the compensation coefficients for AUX input
e	Prints the extended error information from the accumulated detected error(s) since last error read-out in Service Mode or by the E-command in Normal Mode (ref. section 9.4)

**Table 10-5: Error messages for i (INFORMATION) commands**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command or parameter is not recognised
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range

```

### 10.4 d (DATAGRAM FORMAT) command

General description: Sets the datagram transmission mode and termination (ref. Table 6-11 and section 12).

Note that the datagram format could be considered invalid, even if it has been entered correctly. This is because a valid datagram format also depends on the chosen sample rate and bit rate (ref. Table 6-12 and error message E007 in Table 10-13).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-10 : Available d (DATAGRAM FORMAT) command**

Syntax	Response

>d 3,1  
DATAGRAM = RATE, ACCELERATION, INCLINATION  
DATAGRAM TERMINATION = <CR><LF>  
  
>
```

Figure 10-21: Example of response from d (DATATGRAM MODE AND TERMINATION) command

### 10.5 t (TRANSMISSION PARAMETERS) command

General description: Changes the transmission parameters for the RS422 interface.

Note that the bit-rate could be considered invalid, even if it has been entered correctly. This is because a valid bit-rate also depends on the sample rate and chosen datagram content (ref. Table 6-12 and error message E007 in Table 10-18).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). If confirmation to the SAVE-command is not "Y", the transmission parameters will be reset to the previously stored settings. In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-14 : Available t (TRANSMISSION PARAMETERS) commands**

Syntax	Response
t<SP><bit-rate code><CR>	Changes the transmission bit-rate and leaves number of stop-bits and parity unchanged
t<SP><bit-rate code>','<stop-bits>','<parity><CR>	Changes the transmission bit-rate, number of stop-bits and parity
t<SP>'f','<bit-rate><CR>	Changes the transmission bit-rate to a user-defined bit-rate and leaves number of stop-bits and parity unchanged, ref.section 10.5.1
t<SP>'f','<bit-rate>','<stop-bits>','<parity><CR>	Changes the transmission bit-rate to a user-defined bit-rate, number of stop-bits and parity, ref.section 10.5.1

**Table 10-15: Allowed values for <bit-rate code> parameter for t (TRANSMISSION PARAMETERS) commands**

<bit-rate code>	Result
0	Will set the bit-rate to 377400 bits/s
1	Will set the bit-rate to 460800 bits/s
2	Will set the bit-rate to 921600 bits/s
3	Will set the bit-rate to 1843200 bits/s

**Table 10-16: Allowed values for <stop-bits> parameter for t (TRANSMISSION PARAMETERS) commands**

<stop-bits>	Result
1	Will set number of stop bits to 1
2	Will set number of stop bits to 2

**Table 10-17: Allowed values for <parity> parameter for t (TRANSMISSION PARAMETERS) commands**

<parity>	Result
0	Will set no parity
1	Will set odd parity
2	Will set even parity

#### 10.5.1 User-defined bit-rate

The STIM300 hardware is capable of setting bit-rates in the range between 1500 and 5184000 bits/s. However, the sample rate and the datagram length decide the minimum bit-rate possible, ref. Equation 11:

**Equation 11: Minimum bit-rate**

$$Bit - rate_{MIN} = 1.1 \cdot bits \cdot bytes \cdot sample\_rate$$

where bits = start-bit (1) + data-bits (8) + stop-bits (1 or 2) + parity-bit (0 or 1)  
 bytes = number of bytes in the chosen datagram, ref. Table 6-18 and Table 6-12 (NB: number of bytes in Table 6-12 includes <CR><LF>)  
 sample\_rate is the chosen sample rate [samples/s]

If a bit-rate, lower than the allowed bit-rate defined by Equation 11, is entered, the command will respond with error message E007, ref. Table 10-18.

There are a finite number of bit-rates possible to set. This is defined in Equation 12:

**Equation 12: Set bit-rate**

$$Bit - rate_{SET} = \frac{82944000}{n} \text{ bits / s}$$

where  $n$  is an integer

The actually set bit-rate will hence be the closest to requested bit-rate. The response of the `t` (TRANSMISSION PARAMETERS)-command will be the set bit-rate. Be aware that for certain bit-rates above 1.5Mbit/s, the deviation between the requested bit-rate and set bit-rate could be larger than 1% and may be in conflict with the RS422 specification. No warnings are issued related to this issue. As a safety precaution, the new bit-rate can only be permanently set by using the `s` (SAVE)-command (using the new bit-rate).

**Table 10-18: Error messages for `t` (TRANSMISSION PARAMETERS) commands**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range
E007	DATAGRAM WILL BE TOO LONG TO TRANSMIT	Combination of bit-rate, sample rate and datagram content results in a datagram that cannot be transmitted

```
>t 2,1,2
BIT-RATE [bits/s] = 921600
DATA LENGTH = 8
STOP BITS = 1
PARITY = EVEN
>
```

**Figure 10-22: Example of response from `t` (TRANSMISSION PARAMETERS) command to set standard bit-rate**

```
>t f,500000
BIT-RATE [bits/s] = 500023
DATA LENGTH = 8
STOP BITS = 1
PARITY = EVEN
>
```

**Figure 10-23: Example of response from `t` (TRANSMISSION PARAMETERS) command to set user-defined bit-rate**

**10.6 r (LINE TERMINATION) command**

General description: Turns the line termination ON or OFF. Line termination should be ON when communicating point-point (single master – single slave).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-19: Available r (LINE TERMINATION) command**

Syntax	Response
r<SP><lineterm><CR>	Changes the line termination

**Table 10-20: Allowed values for r (LINE TERMINATION) command**

<lineterm>	Result
0	Turns line termination OFF
1	Turns line termination ON

**Table 10-21: Error messages for r (LINE TERMINATION) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range

```
>r 0
LINE TERMINATION = OFF
>
```

```
>r 1
LINE TERMINATION = ON
>
```

**Figure 10-25: Example of response from r 1 (LINE TERMINATION) command**

### 10.7 u (OUTPUT UNIT) command

General description: Sets the output unit of the transmission in Normal Mode.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-22: Available u (OUTPUT UNIT) command**

Syntax	Response
u<SP>'<sens>',<unit><CR>	Changes the unit of the transmission in Normal Mode

**Table 10-23: Allowed values for <sens> and <unit> for u (OUTPUT UNIT) command**

<sens>	<unit>	Result
g	0	Changes the gyro output unit to angular rate [°/s]
g	1	Changes the gyro output unit to incremental angle [°/sample]
g	2	Changes the gyro output unit to average angular rate [°/s]
g	3	Changes the gyro output unit to integrated angle [°]
g	8	Changes the gyro output unit to angular rate – delayed [°/s]
g	9	Changes the gyro output unit to incremental angle – delayed [°/sample]
g	a	Changes the gyro output unit to average angular rate – delayed [°/s]
g	b	Changes the gyro output unit to integrated angle – delayed [°]
a	0	Changes the accelerometer output unit to acceleration [g]
a	1	Changes the accelerometer output unit to incremental velocity [m/s/sample]
a	2	Changes the accelerometer output unit to average acceleration [g]
a	3	Changes the accelerometer output unit to integrated velocity [m/s]
i	0	Changes the inclinometer output unit to acceleration [g]
i	1	Changes the inclinometer output unit to incremental velocity [m/s/sample]
i	2	Changes the inclinometer output unit to average acceleration [g]
i	3	Changes the inclinometer output unit to integrated velocity [m/s]

**Table 10-24: Error messages for u (OUTPUT UNIT) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range

```
>u g,0
GYRO OUTPUT UNIT = [°/s] – ANGULAR RATE
>
```

ACCELEROMETER OUTPUT UNIT = [g] – AVERAGE ACCELERATION
>
```

**Figure 10-27: Example of response from u (OUTPUT UNIT) command**

### 10.8 f (LP FILTER -3dB FREQUENCY) command

General description: Changes the low-pass filter -3dB frequency for one or all axes.

Note that low pass filter settings should be considered together with sample rate in order to avoid issues with folding due to undersampling. No warnings will be issued by STIM300 if e.g. a high filter bandwidth and a low sample rate have been chosen.

Note that change in filter setting will change the group delay, ref. Table 6-11.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-25: Available f (LP FILTER -3dB FREQUENCY) commands**

Syntax	Response
f<SP><-3dBfreq><CR>	Changes the LP filter -3dB frequency for all sensors and axes
f<SP><-3dBfreq>','<sens><CR>	Changes the LP filter -3dB frequency for all axes of a specific sensor
f<SP><-3dBfreq>',' <sens>','<axis><CR>	Changes the LP filter -3dB frequency for a specified sensor and axis

**Table 10-26: Allowed values for <-3dBfreq> parameter for f (LP FILTER -3dB FREQUENCY) commands**

<-3dBfreq>	Result
0	Will change LP filter -3dB frequency to 16Hz
1	Will change LP filter -3dB frequency to 33Hz
2	Will change LP filter -3dB frequency to 66Hz
3	Will change LP filter -3dB frequency to 131Hz
4	Will change LP filter -3dB frequency to 262Hz

**Table 10-27: Allowed values for <sens> parameter for f (LP FILTER -3dB FREQUENCY) commands**

<sens>	Result
g	Will change LP filter -3dB frequency for the gyro(s)
a	Will change LP filter -3dB frequency for the accelerometer(s)
i	Will change LP filter -3dB frequency for the inclinometer(s)
u	Will change LP filter -3dB frequency for AUX

**Table 10-28: Allowed values for <axis> parameter for f (LP FILTER -3dB FREQUENCY) commands**

<axis>	Result
x	Will change LP filter -3dB frequency for X-axis only
y	Will change LP filter -3dB frequency for Y-axis only
z	Will change LP filter -3dB frequency for Z-axis only

### 10.9 m (SAMPLE RATE) command

General description: Changes the sample rate in Normal Mode. The sample rate is the same for all channels.

Note that the sample rate could be considered invalid, even if it has been entered correctly. This is because a valid sample rate also depends on the bit rate and chosen datagram content (ref. Table 6-12 and error message E007 in Table 10-32).

Note that sample rate should be considered together with filter settings in order to avoid issues with folding due to undersampling. No warnings will be issued by STIM300 if e.g. a high filter bandwidth and a low sample rate have been chosen.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-30: Available m (SAMPLE RATE) command**

Syntax	Response
m<SP><sampl.rate><CR>	Changes the sample rate in Normal Mode

**Table 10-31: Allowed values for <sampl.rate> parameter for m (SAMPLE RATE) command**

<sampl.rate>	Result
0	Will set sample rate to 125 samples /second
1	Will set sample rate to 250 samples /second
2	Will set sample rate to 500 samples /second
3	Will set sample rate to 1000 samples /second
4	Will set sample rate to 2000 samples /second
5	Will set sample to External Trigger

**Table 10-32: Error messages for m (SAMPLE RATE) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range
E007	DATAGRAM WILL BE TOO LONG TO TRANSMIT	Combination of bit-rate, sample rate and datagram content results in a datagram that cannot be transmitted

```
>m 2
SAMPLE RATE [samples/s] = 500
>
```

**Figure 10-32: Example of response from m (SAMPLE RATE) command**

```
>m 5
SAMPLE RATE = EXTERNAL TRIGGER
>
```

**Figure 10-33: Example of response from m (SAMPLE RATE) command**

### 10.10 k (AUX COMP) command

General description: Changes the compensation coefficients of the AUX input.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.12). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

**Table 10-33: Available k (AUX COMP) command**

Syntax	Response
k<SP><A>','<B><CR>	Changes the compensation coefficients, A and B, of the AUX input

<A> and <B> are numbers. Decimal point = '.'. Format can be integer, scientific or decimal.

**Table 10-34: Error messages for k (AUX COMP) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Too many or too few parameters, use of comma between command and first parameter

```
>k 1.02,3.4e-2
AUX COMP COEFF: A = 1.0200000e+00, B = 3.4000000e-02
>
```

**Figure 10-34: Example of response from e (AUX COMP) command**

### 10.11 g (GYRO G-COMP) command

General description: Changes the compensation parameters for the gyro g-compensation of bias and/or scale-factor.

Refer to section 8.5.2.2.6 for a description of this functionality.

**Table 10-35: Available g (GYRO G-COMP) commands**

Syntax	Response
<b>g&lt;SP&gt;&lt;StdComp&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to one of the defined standard configurations. The cut-off frequency of the g-compensation LP-filter will be set to 0.01Hz. Gyro g-compensation will be applied to all axes.
<b>g&lt;SP&gt;&lt;StdComp&gt;','&lt;FilterCutoff&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to one of the defined standard configurations, but sets the g-compensation LP-filter to a non-standard cut-off frequency. Gyro g-compensation will be applied to all axes.
<b>g&lt;SP&gt;&lt;BiasSource&gt;','&lt;BiasFilter&gt;','&lt;ScaleSource&gt;','&lt;ScaleFilter&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to a user-defined gyro g-compensation configuration, but leaves the g-compensation LP-filter unchanged. Gyro g-compensation will be applied to all axes.
<b>g&lt;SP&gt;&lt;BiasSource&gt;','&lt;BiasFilter&gt;','&lt;ScaleSource&gt;','&lt;ScaleFilter&gt;','&lt;FilterCutoff&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to a user-defined gyro g-compensation configuration, including the g-compensation LP-filter. Gyro g-compensation will be applied to all axes.
<b>g&lt;SP&gt;&lt;Xonoff&gt;','&lt;Yonoff&gt;','&lt;Zonoff&gt;','&lt;BiasSource&gt;','&lt;BiasFilter&gt;','&lt;ScaleSource&gt;','&lt;ScaleFilter&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to a user-defined gyro g-compensation configuration, but leaves the g-compensation LP-filter unchanged. Gyro g-compensation will be applied to specific axes.
<b>g&lt;SP&gt;&lt;Xonoff&gt;','&lt;Yonoff&gt;','&lt;Zonoff&gt;','&lt;BiasSource&gt;','&lt;BiasFilter&gt;','&lt;ScaleSource&gt;','&lt;ScaleFilter&gt;','&lt;FilterCutoff&gt;&lt;CR&gt;</b>	Changes the gyro g-compensation to a user-defined gyro g-compensation configuration, including the g-compensation LP-filter. Gyro g-compensation will be applied to specific axes.

**Table 10-36 : Allowed values for <StdComp> for g (GYRO G-COMP) command**

<StdComp>	Bias		Scale-factor	
	BiasSource	BiasFilter	ScaleSource	ScaleFilter
0	OFF	-	OFF	-
1 <sup>1)</sup>	OFF	-	ACC	OFF
2	OFF	-	ACC	ON
3 <sup>1)</sup>	ACC	OFF	OFF	-
4	ACC	ON	OFF	-
5 <sup>1)</sup>	INC	OFF	OFF	-
6	INC	ON	OFF	-
7 <sup>1)</sup>	ACC	OFF	ACC	OFF
8 <sup>1)</sup>	ACC	ON	ACC	OFF
9 <sup>1)</sup>	INC	OFF	ACC	OFF
a <sup>1)</sup>	INC	ON	ACC	OFF
b	ACC	ON	ACC	ON
c	INC	ON	INC	ON

<sup>1)</sup> A warning will be issued if gyro output unit has not been chosen as delayed (ref. section 8.5.2.2.1 and 10.7)

**Table 10-37 : Allowed range for <FilterCutoff> for g (GYRO G-COMP) command**

<FilterCutoff>	Unit	Minimum	Standard	Maximum
<FilterCutoff>	Hz	0.001	0.01	5.00

Decimal point = '.'. Format can be integer, scientific or decimal.

**Table 10-38 : Allowed values for <ScaleSource> and <BiasSource> for g (GYRO G-COMP) command**

<BiasSource> <ScaleSource>	Result
0	Gyro g-compensation turned OFF
1	Gyro g-compensation uses data from accelerometers
2	Gyro g-compensation uses data from inclinometers

**Table 10-39 : Allowed values for <ScaleFilter> and <BiasFilter> for g (GYRO G-COMP) command**

<BiasFilter> <ScaleFilter>	Result
0	Gyro g-compensation LP-filter not applied (OFF)
1	Gyro g-compensation LP-filter applied (ON)

**Table 10-40 : Allowed values for <Xonoff>, <Yonoff> and <Zonoff> for g (GYRO G-COMP) command**

<Xonoff> <Yonoff> <Zonoff>	Result
0	Gyro g-compensation is not applied to specific axis (OFF)
1	Gyro g-compensation is applied to specific axis (ACC or INC)

### 10.12 s (SAVE) command

General description: Saves configuration parameters to flash. This will permanently change the configuration parameters and hence be valid after an initialisation or power-off.

The flash used in STIM300 is specified to be capable of minimum 1000 saves. A save-counter has been implemented and when the number of saves exceeds 1000, there will be issued a warning. STIM300 will always attempt to save the configuration when receiving the s (SAVE) command regardless of the content of the save-counter.

**Table 10-42: Available s (SAVE) command**

Syntax	Response
s<CR>	Saves system parameters to flash. This command will require an additional confirmation prior to execution. Confirmation ("Y") to be responded in upper case letter. If transmission parameters have been changed (ref. TRANSMISSION PARAMETERS command, section 10.5) AND confirmation to the save-command is not "Y", then the transmission parameters, including bit-rate, will be reset to the previously saved settings

**Table 10-43: Error messages for s (SAVE) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Any characters between command and <CR>
E003	INVALID PARAMETER	Value of parameter outside valid range
E004	EXCEEDED MAXIMUM NUMBER OF SAVES	Warning appears when maximum number of saves has been exceeded (1000 saves). STIM300 will always attempt to save the configuration when receiving the s (SAVE)-command.
E005	ERROR DURING SAVE	System parameters not successfully transferred to flash

```
>s
SYSTEM PARAMETERS WILL BE PERMANENTLY CHANGED. CONFIRM SAVE(Y/N): Y
SYSTEM PARAMETERS SUCCESSFULLY STORED IN FLASH.
NUMBER OF SAVES = 26
>
```

**Figure 10-39: Example of response from s (SAVE) command when confirming save**

>
```

**Figure 10-41: Example of response from s (SAVE) command when not correctly responding to confirmation**

### 10.13 x (EXIT) command

General description: Terminates Service Mode and returns to Normal Mode directly or via Init Mode (ref. Figure 8-6).

**Table 10-44 : Available x (EXIT) command**

Syntax	Response
x<SP><exit_to><CR>	Terminates Service Mode

**Table 10-45 : Allowed values for <exit\_to> for x (EXIT) command**

<exit_to>	Result
n	Terminates Service Mode and return to Normal Mode. If system parameters have been changed compared to flash content, a confirmation is requested before exiting to Normal Mode ("Y" in upper case letter). There will be a 3 seconds hold-time between the transmitted command response and execution of the EXIT-command.
i	Terminates Service Mode and return to Init Mode. If system parameters have been changed compared to flash content, a confirmation is requested before exiting to Normal Mode ("Y" in upper case letter). There will be a 3 seconds hold-time between the transmitted command response and execution of the EXIT-command. <b>NB: Changes made to system parameters, but not saved, will be overwritten by the data already stored in flash when entering Init Mode.</b>
N	Terminates Service Mode and return immediately to Normal Mode (without confirmation if system parameters have been changed compared to flash and without any hold-time)
I	Terminates Service Mode and return immediately to Init Mode (without confirmation if system parameters have been changed compared to flash and without any hold-time). <b>NB: Changes made to system parameters, but not saved, will be overwritten by the data already stored in flash when entering Init Mode.</b>

**Table 10-46: Error messages for x (EXIT) command**

### 10.14 z (RESTORE TO FACTORY SETTINGS) command

General description: Restores the configuration of the unit to its factory settings.

**Table 10-47: Available z (RESTORE TO FACTORY SETTINGS) commands**

Syntax	Response
<b>z&lt;CR&gt;</b>	Restores the configuration of the unit to its factory settings. <b>NB: The restored configuration will not be permanent unless it is SAVED to flash before EXITing Service Mode, resetting the unit or turning off power.</b>
<b>z&lt;SP&gt;,'s',&lt;CR&gt;</b>	Restores the configuration of the unit to its factory settings and saves the configuration to flash.

**Table 10-48: Error messages for z (RESTORE TO FACTORY SETTINGS) command**

Error	Message	Possible reason
E001	UNKOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Any characters between command and <CR>
E003	INVALID PARAMETER	Value of parameter outside valid range
E004	EXCEEDED MAXIMUM NUMBER OF SAVES	Warning appears when maximum number of saves has been exceeded (1000 saves). STIM300 will always attempt to save the configuration when receiving the s (SAVE)-command.

## 11 MARKING

Figure 11-1: Example of marking of STIM300

### 12 CONFIGURATION / ORDERING INFORMATION

The STIM300 will be delivered according to the configuration code as shown below. All configuration parameters can be changed later in Service Mode, ref. section 8.5.3. A full list of configurable parameters can be found in Table 6-11.

Configuration parameters in **bold** letters show the standard option.

Range		Measurement						Output/RS422			
Prod_ID	-	Sample rate	Filter band-width	Gyro output unit	Acc. output unit	Incl. output unit	Gyro g-comp	-	Datagram	Bit-rate	Termination

Range		
Prod_ID	Gyro	Acc
84458	400°/s	5g
<b>84167</b>	<b>400°/s</b>	<b>10g</b>
84461	400°/s	30g
84615	400°/s	80g

Sample rate:
0 = 125 samples/s
1 = 250 samples/s
2 = 500 samples/s
3 = 1000 samples/s
<b>4 = 2000 samples/s</b>
5 = External Trigger

Filter bandwidth:
0 = 16Hz
1 = 33Hz
2 = 66Hz
3 = 131Hz
<b>4 = 262Hz</b>

Gyro output unit:
<b>0 = Angular Rate [°/s]</b>
1 = Incremental Angle [°/sample]
2 = Average Angular Rate [°/s]
3 = Integrated Angle [°]
8 = Angular Rate [°/s] – delayed
9 = Incremental Angle [°/sample] – delayed
a = Average Angular Rate [°/s] – delayed
b = Integrated Angle [°] - delayed

Acc. output unit:
<b>0 = Acceleration [g]</b>
1 = Incremental Velocity [m/s/sample]
2 = Average Acceleration [g]
3 = Integrated Velocity [m/s]

Incl. output unit:
<b>0 = Acceleration [g]</b>
1 = Incremental Velocity [m/s/sample]
2 = Average Acceleration [g]
3 = Integrated Velocity [m/s]

Gyro g-comp	Bias		Scale-factor

3	ON	<CR><LF>

RS422 data configuration	
#Start bit	1
#Data bits	8
#Stop bits	1 <sup>3)</sup>
Parity	None <sup>3)</sup>

- 1) Delayed gyro output unit should be selected with this option
- 2) Bit-rate must be specified. See section 10.5 for limitations
- 3) Configuration can be changed in SERVICEMODE. See section 10.5

Example: 84167-413020-330 has the following configuration:

- Gyro range = 400°/s, accelerometer range = 10g
- Sample rate = 2000 samples/s
- Low-pass filter bandwidth = 33Hz
- Gyro output unit = Integrated Angle [°]
- Accelerometer output unit = Acceleration [g]
- Inclinator output unit = Average Acceleration [g]
- No g-/acc-compensation of bias and scale-factor
- Datagram containing Rate, Acceleration and Inclination
- Bit-rate = 1843200 bits/s
- Datagram Termination = None
- Line termination OFF

## NOTES
