ELECTRONICS & DEFENSE

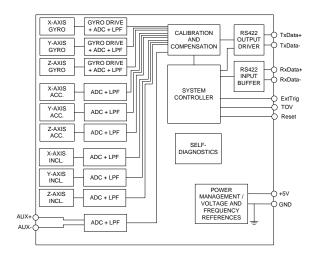

STIM300 Inertial Measurement Unit

FEATURES:

- o Miniature package
- Low noise
- Low bias instability
- Excellent performance in vibration and shock environments
- 9 axes offered in same package
- Electronically calibrated axis alignment
- Gyros based on Safran ButterflyGyroTM
 - Single-crystal silicon technology
 - No intrinsic wear-out effects
- High stability accelerometers and inclinometers
- o Insensitive to magnetic fields
- Full EMI compliance
- o Digital interface, RS422
- Fully configurable
- Continuous self-diagnostics
- RoHS compatible

BLOCK DIAGRAM:

1 GENERAL DESCRIPTION

STIM300 is an IMU consisting of 3 high accuracy MEMS-based gyros, 3 high stability accelerometers and 3 high stability inclinometers in a miniature package. Each axis is factory-calibrated for bias, scale factor and compensated for temperature effects to provide high-accuracy measurements in the temperature range -40°C to +85°C. The unit runs off a single +5V supply.

STIM300 communicates via a standard high-level RS422 interface. The use of a 32-bit RISC ARM microcontroller provides flexibility in the configuration, like choice of output unit, sample rate, low pass filter –3dB frequency and RS422 bit-rate and protocol parameters. All configurable parameters can be defined when ordering or set by customer.

When STIM300 is powered up, it will perform an internal system check and synchronize the sensor channels. As an acknowledgement of the complete power-up sequence, it will provide special datagrams containing part number, serial number, configuration and bias trim data. STIM300 will then automatically proceed to provide measurement data.

The measurement data is transmitted as packages of data on a fixed format (datagram) at intervals given by the sample rate together with a synchronization signal (TOV). The datagram is in binary coded format in order to have an efficient transfer of data. In addition to the measurement data itself, the datagram contains an identifier, status bytes and a 32 bit CRC (Cyclic Redundancy Check) to provide high degree of fault detection in the transmissions. The status bytes will flag any detected errors in the system. STIM300 can also be configured to transmit data only when triggered by a separate digital input signal (ExtTrig).

For more advanced users, the gyro may be put in Service Mode. In this mode all the configuration parameters can be intermediately or permanently changed by overwriting the current settings in the flash memory. In Service Mode the commands and responses are in a human readable format (ASCII); to enable the use of terminal-type software during typical product integration. Service Mode also provides the ability to perform single measurements, perform diagnostics and obtain a higher detail level of detected errors reported in the status bytes.

Finally, STIM300 may be put in Utility Mode. This mode is similar to Service Mode, but made for machine-machine communication.

3 DEFINITIONS AND ABBREVIATIONS USED IN DOCUMENT

3.1 Definitions

g₀= 9.80665m/s² (standard gravity)

3.2 Abbreviations

Table 3-1: Abbreviations

ABBREVIATION	FULL NAME
ASCII	American Standard Code for Information Interchange
AUX	Auxiliary
BCD	Binary Coded Decimal
BSL	Best Straight Line
BTO	Bias Trim Offset
CIC-filter	Cascaded Integrator-Comb filter
CR	Carriage Return
CRC	Cyclic Redundancy Check
ESD	Electro-Static Discharge
ExtTrig	External Trigger
GND	Ground
IMU	Inertial Measurement Unit
LF	Line Feed
LP filter	Low-Pass filter
MEMS	Micro Electro Mechanical Structure
NRST	Negative (active) Reset
rms	root mean square
RxD	Receive Data
TOV	Time of Validity
TxD	Transmit Data
VRC	Vibration Rectification Coefficient
VSUP	Voltage supply

4 ABSOLUTE MAXIMUM RATINGS

Stresses beyond those listed in Table 4-1 may cause permanent damage to the device.

Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Table 4-1: Absolute maximum ratings

Parameter	Rating	Comment
Mechanical shock	1 500g/0.5ms half-sine	Any direction. Ref: MIL STD-883G
ESD human body model	±2kV	Ref: JEDEC/ESDA JS-001
Storage temperature	-55°C to +90°C	Up to 1000 hours
VSUP to GND	-0.5 to +7V	
RxD+ or RxD- to GND	-0.3V to +7V	
RxD+ to RxD-	±6V	with 120Ω Line Termination = ON
TxD+ or TxD- to GND	-8V to +8V	
ExtTrig to GND	-0.3V to +7V	
TOV to GND	-0.3V to +7V	
NRST to GND	-0.3V to +7V	
AUX+ to AUX-	±6.5V	
AUX+ or AUX- to GND	±6.5V	
Chassis to GND	500VDC	
Helium sensitivity		Not to be exposed to helium concentrations higher
		than those normally found in the atmosphere

5 SPECIFICATIONS

Table 5-1: Operating conditions

Parameter	Conditions	Min	Nom	Max	Unit	Note
INPUT RANGE, ANGULAR RATE			±400		°/s	
INPUT RANGE, ACCELERATION			±10		g	1
INPUT RANGE, INCLINATION			±1.7		g	
POWER SUPPLY		4.5	5.0	5.5	V	2,3
OPERATING TEMPERATURE		-40		+85	°C	

Note 1: Other ranges available, ref. Table 5-5 (5g), Table 5-6 (30g) and Table 5-7 (80g)

Note 2: At supply voltages above 5.85V (nominal value) an internal voltage protection circuit will cut power and the unit will go into reset until the voltage is back within operating conditions.

Note 3: At supply voltages below 4.05V (nominal value) the unit will go into reset until the voltage is back within operating conditions. Due to power consumption being much lower in reset compared to normal operation, the series resistance between power source and STIM300 could give rise to an oscillating behavior of the input voltage to the unit.

CHASSIS						
Isolation resistance chassis to	500VDC	100			MΩ	
GND (pin 15)						

Note 1: Time from Power-On to start of datagram transmissions (starting with part-number datagram)

Note 2: Time from Reset release to start of datagram transmissions (starting with part-number datagram)

Note 3: Time from Power-On or Reset to the reset of the Start-Up bit (Bit 6 in the STATUS byte ref. Table 5-22). During this period the output data should be regarded as non-valid.

Note 4: If a user-defined bit-rate larger than 1.5Mbit/s is used, the deviation may exceed the specification due to the resolution of the bit-rate generator, ref. section 9.5.1

Note 5: Other values can be configured, ref. Table 5-11

Note 6: If time between triggers is longer than 127ms, the sample counter will over-run

Note 7: Time between triggers should be carefully evaluated as long time between triggers in combination with high bandwidths could lead to issues related to folding. Similar for accelerometer and inclinometer outputs

Note 8: If time between triggers is longer than 8ms, an overload may occur in the incremental angle. An overload will be flagged in the status byte, ref. Table 5-22. Similar for accelerometer and inclinometer outputs

Note 9: If time between triggers is longer, the accuracy of average rate may also be reduced. Similar for accelerometer and inclinometer outputs

Note 10: If time between triggers is longer, the integrated angle may have wrapped several times and hence the change in angle from last sample will not be possible to calculate. Similar for accelerometer and inclinometer outputs

Note 11: For definition, ref. Figure 7-3

Note 12: Digital output level can be configured to 5V or 3.3V in SERVICEMODE (ref. section 9.16) or when ordering (ref. section 12)

Note 13: For definition, ref. Figure 7-4 and Figure 7-5

Note 1: Output is monotonous and will saturate at ±480°/s

Note 2: Largest deviation from BSL (Best Straight Line) over the range specified

Note 3: Low-pass filter -3dB frequency can be configured, ref. Table 5-11 and section 5.1.1.4

Note 4: Other values can be configured, ref. Table 5-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 5: Total delay to start of datagram transmission = group delay + 0.5ms + t_{tov_dl} + t_{tx_dl}. For output units with delayed output, the group delay will be 4.5ms longer, ref. section 7.5.2.2.1. For more details, see TS1631 Application Note "Timing details between sampling and datagram transmission"

Note 6: rms-value calculated on the residuals at static temperatures over the temperature range

Note 7: rms-value calculated on the residual over two temperature-cycles, ref. Figure 5-6

Note 8: Section 6.2 gives advice on sensitive directions

Note 9: Ref. Figure 6-5 for definition of reference points used in axis alignment

Note 10: Gyros, accelerometers and inclinometers are calibrated in the same test-insertion to ensure minimum misalignment between the three sensor-axis systems

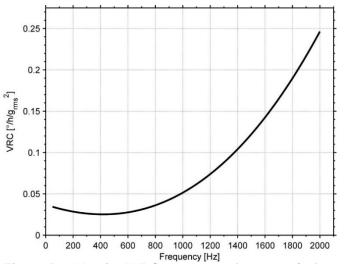

Figure 5-1: Nominal VRC at 20g rms for gyros (ref. section 6.2 for sensitive directions to acceleration-forces)

Note 1: Output will saturate at ±96g. Overload-bit in STATUS-byte (ref. section 5.4) will be set at ±96g Note 2: Largest deviation from BSL (Best Straight Line) over the range specified

Note 3: Other values can be configured, ref. Table 5-11 and section 5.1.2.3

Note 4: Other values can be configured, ref. Table 5-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 5: Total delay to start of datagram transmission = group delay + $0.5ms + t_{tov_{dl}} + t_{tx_{dl}}$. For more details, see TS1631 Application Note "Timing details between sampling and datagram transmission"

Note 6: Ref. Figure 6-5 for definition of reference points used in axis alignment

Note 7: Gyros, accelerometers and inclinometers are calibrated in the same test-insertion to ensure minimum misalignment between the three sensor-axis systems

Parameter	Conditions	Min	Nom	Max	Unit	Note
INCLINOMETER						
Full Scale			±1.7		g	1
Resolution			24		bits	
			0.2		μg	
Scale Factor Accuracy	±1g		±500		ppm	
Non-Linearity	±1g		250		ppm	2
Bandwidth (-3dB)	-		17		Hz	3
Sample Rate				2000	samples/s	4
Group Delay	LP filter -3dB = 262Hz		15		ms	5
	LP filter -3dB = 131Hz		17		ms	5
	LP filter -3dB = 66Hz		20		ms	5
	LP filter -3dB = 33Hz		26		ms	5
	LP filter -3dB = 16Hz		38		ms	5
Bias switch on/off repeatability		-0.75	0	+0.75	mg	
Bias Trim Offset range			±20		mg	
Bias error over temperature	ΔT ≤ ±1°C/min		±2		mg rms	
Bias Instability	Allan Variance @25°C		0.06		mg	6
Velocity Random Walk	Allan Variance @25°C		0.08		m/s/√h	6
Misalignment			1		mrad	7
Orthogonality			0.2		mrad	8

Table 5-8: Functional specifications, inclinometers

Note 1: Overload-bit in STATUS-byte (ref. section 5.4) will be set at ±1.87g (+10% of range)

Note 2: Largest deviation from BSL (Best Straight Line) over the range specified

Note 3: Other values can be configured, ref. Table 5-11 and section 5.1.3.3

Note 4: Other values can be configured, ref. Table 5-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 5: Total delay to start of datagram transmission = group delay + $0.5ms + t_{tov_{dl}} + t_{tx_{dl}}$. For more details, see TS1631 Application Note "Timing details between sampling and datagram transmission"

Note 6: At 0g. Bias Instability and Velocity Random Walk increases by typically 35% at ±1g given by the chosen technology for the inclinometers

Note 7: Ref. Figure 6-5 for definition of reference points used in axis alignment

Note 8: Gyros, accelerometers and inclinometers are calibrated in the same test-insertion to ensure minimum misalignment between the three sensor-axis systems

Table 5-9: Functional specifications, AUXiliary input

Parameter	Conditions	Min	Nom	Max	Unit	Note
Full Scale			±2.5		V	1
Resolution			24		bits	
			0.30		μV	
Gain error	@25°C		±0.1		%	2
Gain drift			±10		ppm/°C	
Non-Linearity			10		ppm	3
Bandwidth (-3dB)			262		Hz	4
Sample Rate				2000	samples/s	5
Group Delay	LP filter -3dB = 262Hz		6.1		ms	6
	LP filter -3dB = 131Hz		7.6		ms	6
	LP filter -3dB = 66Hz		11		ms	6
	LP filter -3dB = 33Hz		17		ms	6
	LP filter -3dB = 16Hz		29		ms	6
Offset error	@25°C		±0.75		mV	2
Offset drift			±30		µV/°C	
Noise			60		μV rms	
Input impedance		R	ef. Figure 5	-3		

Note 1: Full-scale input voltage (FS): VIN = (AUX+) – (AUX-)

Note 2: Gain and offset error can be calibrated by changing the calibration coefficients, ref. 7.4 and 9.10

Note 3: Largest deviation from BSL (Best Straight Line) over the range specified

Note 4: Other values can be configured, ref. Table 5-11 and section 5.1.4.1

Note 5: Other values can be configured, ref. Table 5-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 6: Total delay to start of datagram transmission = group delay + 0.5ms + t_{tov_dl} + t_{tx_dl}. For more details, see TS1631 Application Note "Timing details between sampling and datagram transmission"

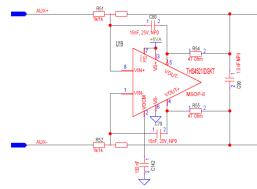

Figure 5-3: AUX input circuitry

Table 5-10: Functional specifications, temperature

Parameter	Conditions	Min	Nom	Max	Unit	Note
Resolution			0.0039		°C	
Bias Accuracy	@25°C		±5		°C	1
Scale factor accuracy			±5		%	
Sample Rate				2000	samples/s	2

Note 1: Temperature measured at gyros. Temperature calibrated at static condition and referred to ambient temperature.

Note 2: Other values can be configured, ref. Table 5-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

5.1 TYPICAL PERFORMANCE CHARACTERISTICS

5.1.1 GYRO CHARACTERISTICS

5.1.1.1 Root Allan Variance of gyro

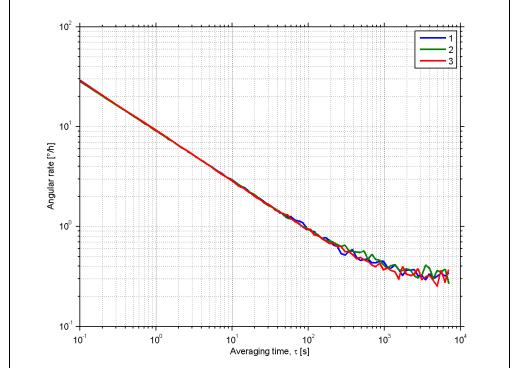

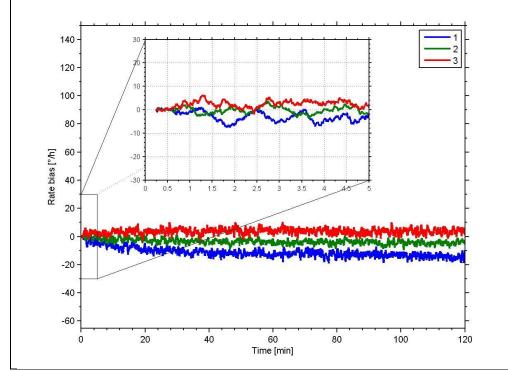

Figure 5-4: Typical Root Allan Variance of gyro (400°/s gyro)

5.1.1.2 Initial bias drift of gyro

Figure 5-5: Typical normalized initial bias drift of gyro (400°/s gyro)

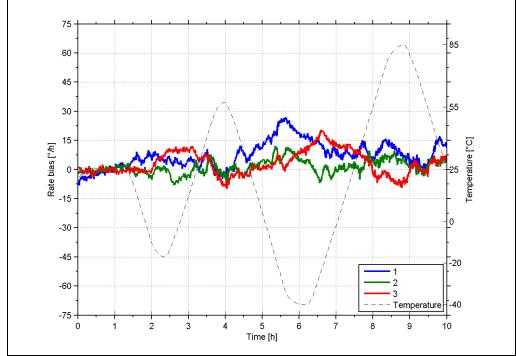

Figure 5-6: Typical Bias drift over temperature (400°/s gyro)

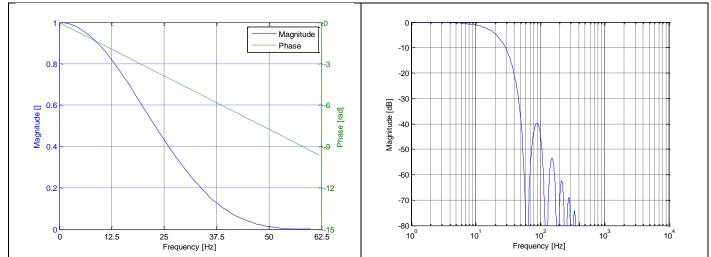

Figure 5-7: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 16Hz

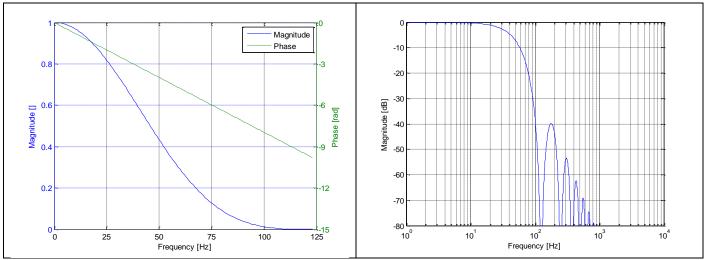

Figure 5-8: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 33Hz

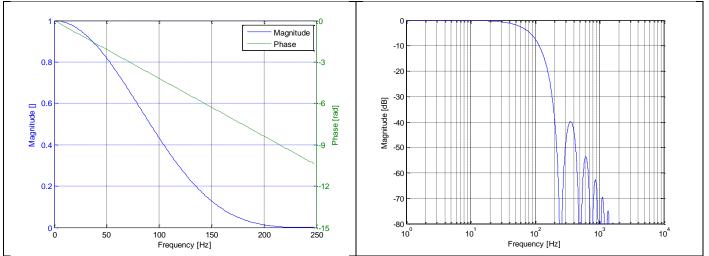

Figure 5-9: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 66Hz

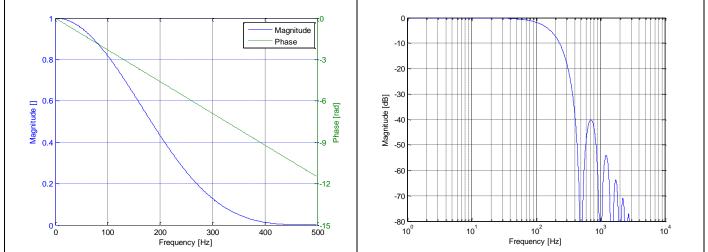

Figure 5-10: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 131Hz

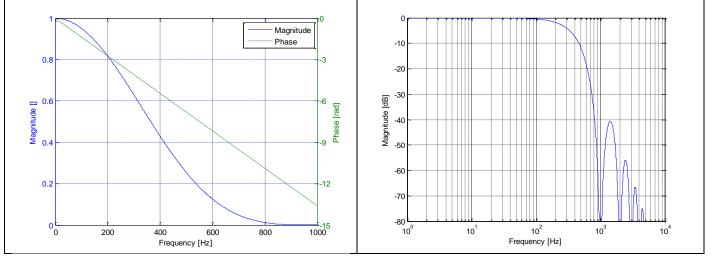

Figure 5-11: Frequency characteristics of gyros with low-pass filter -3dB frequency set to 262Hz

5.1.2 ACCELEROMETER CHARACTERISTICS

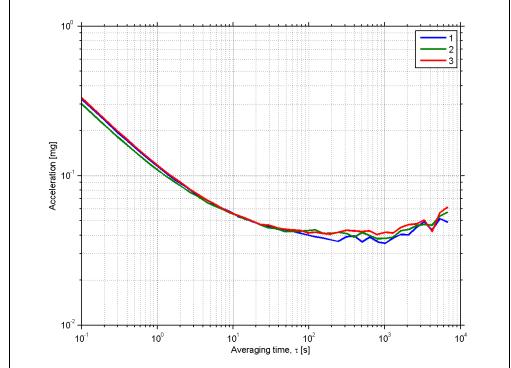

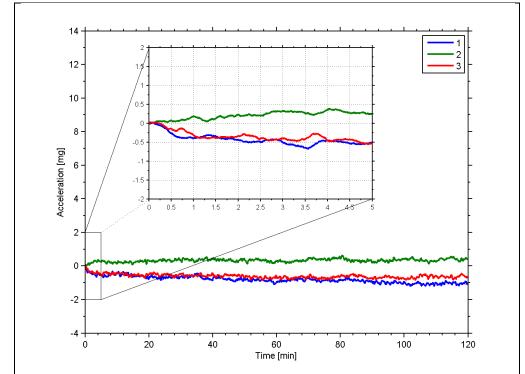

Figure 5-12: Typical Allan-Variance of accelerometer (10g accelerometer)

5.1.2.2 Initial bias drift of accelerometer

Figure 5-13: Typical normalized initial bias drift of accelerometer (10g accelerometer)

5.1.2.3 Frequency characteristics of accelerometers

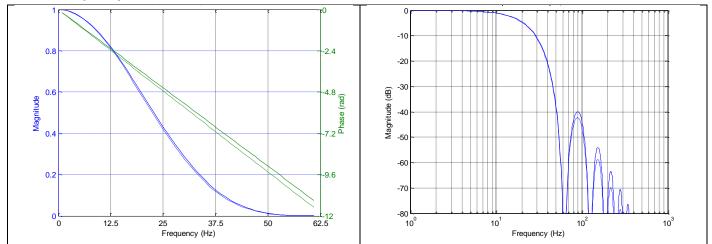

Figure 5-14: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 16Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)

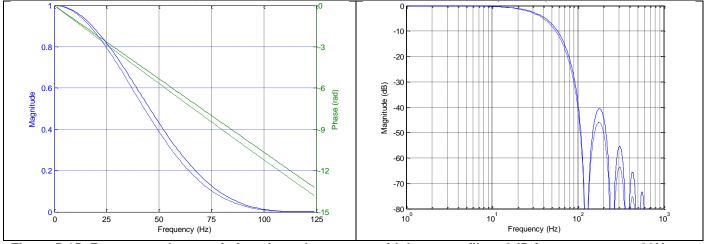

Figure 5-15: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 33Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)

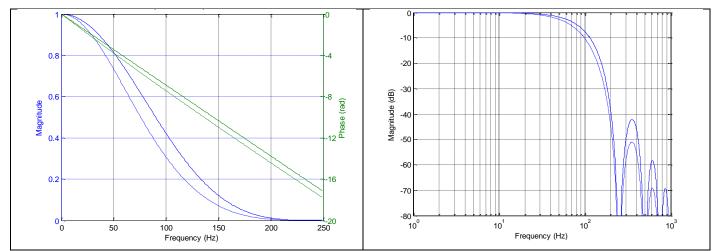

Figure 5-16: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 66Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)

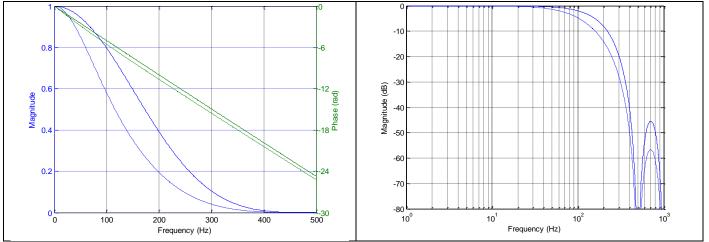

Figure 5-17: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 131Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)

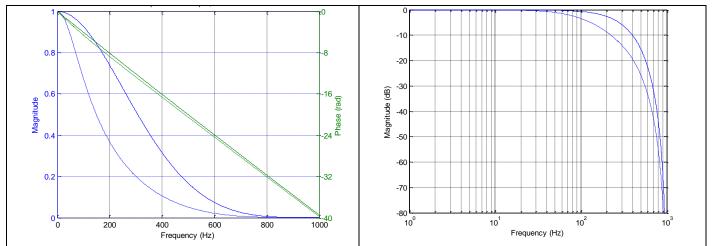

Figure 5-18: Frequency characteristics of accelerometers with low-pass filter -3dB frequency set to 262Hz (solid line: nominal, dashed line: minimum bandwidth, limited by accelerometer)

5.1.3 INCLINOMETER CHARACTERISTICS

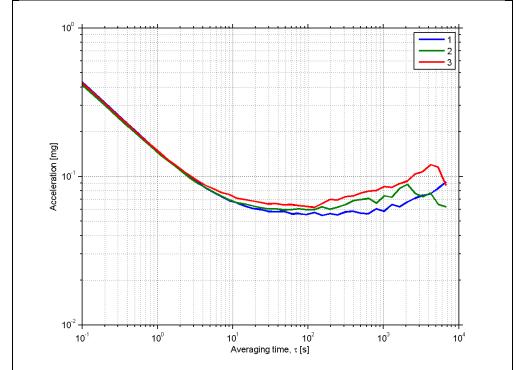

Figure 5-19: Typical Allan-Variance of inclinometer

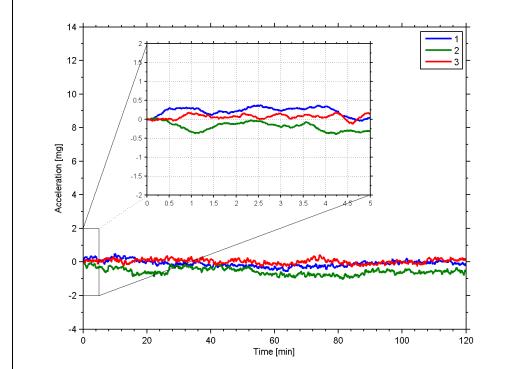

Figure 5-20: Typical normalized initial bias drift of inclinometer

5.1.3.3 Frequency characteristics of inclinometers

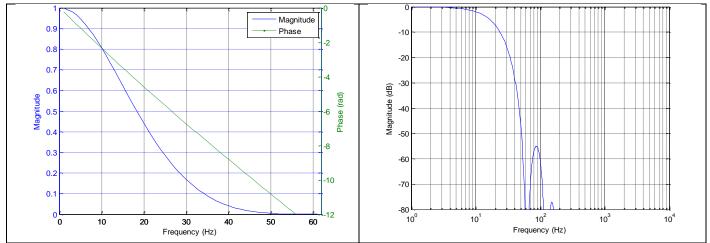

Figure 5-21: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 16Hz

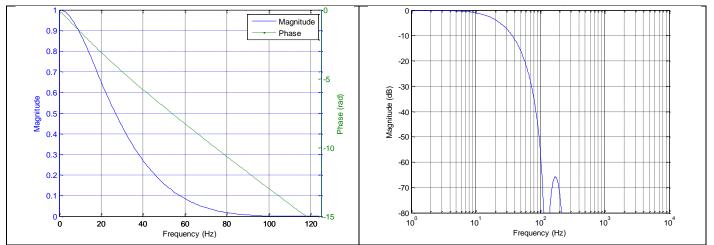

Figure 5-22: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 33Hz

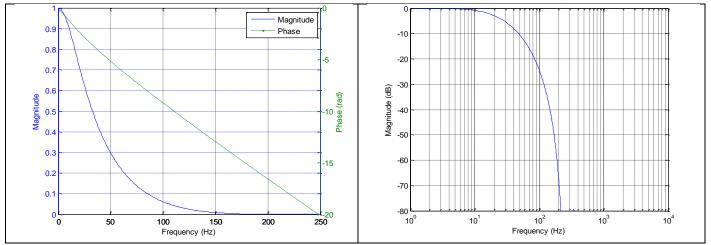

Figure 5-23: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 66Hz

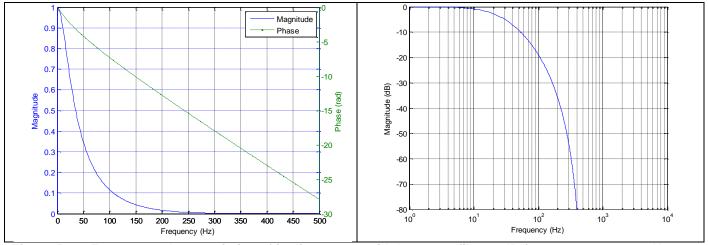

Figure 5-24: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 131Hz

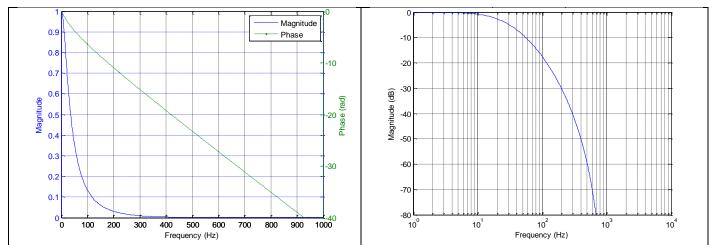

Figure 5-25: Frequency characteristics of inclinometers with low-pass filter -3dB frequency set to 262Hz

5.1.4 AUX CHARACTERISTICS

5.1.4.1 Frequency characteristics of AUX

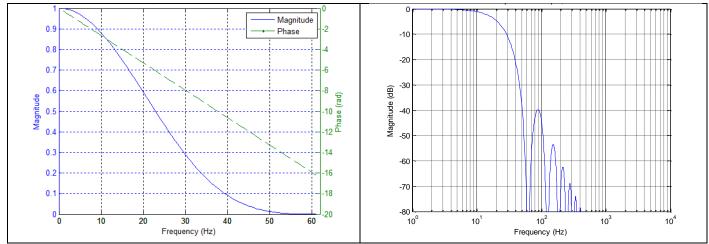

Figure 5-26: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 16Hz

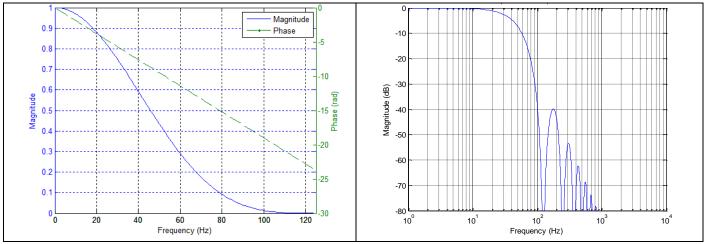

Figure 5-27: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 33Hz

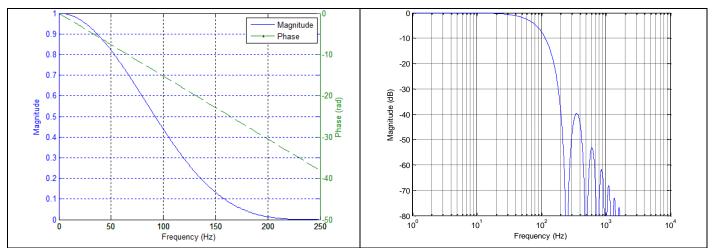

Figure 5-28: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 66Hz

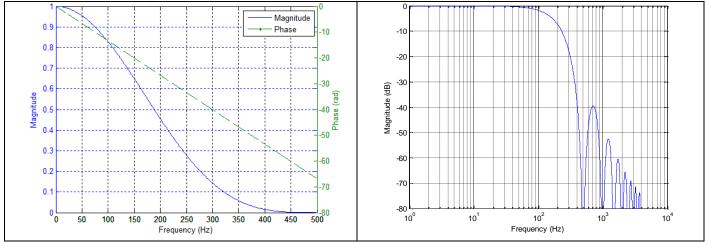

Figure 5-29: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 131Hz

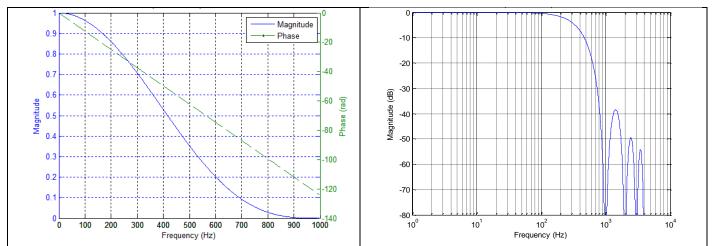

Figure 5-30: Frequency characteristics of AUX with low-pass filter -3dB frequency set to 262Hz

5.2 Configurable parameters

Parameter	Configurations	Comments
SAMPLE RATE	125 samples/s	Some limitations apply to the use of higher sample
	250 samples/s	rates (>500 samples/s), dependent on selected
	500 samples/s	bit-rate and datagram content, ref. Table 5-12
	1000 samples/s	
	2000 samples/s	
	External trigger	
LOW-PASS FILTER -3dB	16Hz	Filter settings are independent of sample rate.
FREQUENCY	33Hz	Low-pass filters are CIC type filters with linear
FREQUENCI	66Hz	
		phase response.
	131Hz	Filter settings can be set individually for each axis.
	262Hz	
MEASUREMENT UNIT GYRO	Angular rate [°/s]	
	Incremental angle [°/sample]	
	Average angular rate [°/s]	
	Integrated angle [°]	
GYRO G-COMPENSATION	OFF	
	ON: Bias and/or scale factor g-compensation	
	using accelerometer-signal	
MEASUREMENT UNIT	Acceleration [g]	
ACCELEROMETER	Incremental velocity [m/s/sample]	
	Average acceleration [g]	
	Integrated velocity [gs]	
MEASUREMENT UNIT INCLINOMETER	Acceleration [g]	
	Incremental velocity [m/s/sample]	
	Average acceleration [g]	
	Integrated velocity [gs]	
BIAS TRIM OFFSET	Bias Trim offset for gyro	
	Bias Trim offset for accelerometers	
	Reference information for bias trim offset	
DATAGRAM	Rate together with any combination of	
DATAGRAM	acceleration, inclination, temperature and	
	AUX	
DATAGRAM TERMINATION	NONE	
DATAGRAM TERMINATION	<cr><lf></lf></cr>	
RS422 BIT-RATE	374400 bits/s	Some limitations apply to the use of lower bit-rates
R3422 BIT-RATE		
	460800 bits/s 921600 bits/s	(< 1843200 bits/s) dependent on sample rate and datagram content, ref. Table 5-12.
	1843200 bits/s	ualayiani content, rei. Table 3-12.
	User-defined	For user-defined bit-rates, see section 9.5
RS422 PARITY	None	
RJ422 PARII I		
	Odd	
	Even	
RS422 STOP BITS	1 stop bit	
	2 stop bits	
RS422 120Ω LINE TERMINATION	OFF	
	ON	
LEVEL OF DIGITAL OUTPUT SIGNALS	5V	
	3.3V	
	OFF	
ACTIVE TOGGLING OF TOV FOR	-	
ACTIVE TOGGLING OF TOV FOR SPECIAL DATAGRAMS AT START-UP	ON	
	-	

Refer to section 12 for information on how to configure STIM300 when ordering and to section 9 for information on how to reconfigure the unit in Service Mode.

Some datagrams are longer than the time between each sample at the lower bit-rate. Table 5-12 show the maximum sample rates.

Table 5-12: Maximum sample rate

Datagram content	Number of transmitted bytes ^{Note 1}	374400 bits/s ^{Note 2}	460800 bits/s ^{Note 2}	921600 bits/s ^{Note 2}	1843200 bits/s ^{Note 2}
Rate	18	1000	2000	2000	2000
Rate and acceleration	28	1000	1000	2000	2000
Rate and inclincation	28	1000	1000	2000	2000
Rate, acceleration and inclination	38	500	1000	2000	2000
Rate and temperature	25	1000	1000	2000	2000
Rate, acceleration and temperature	42	500	500	1000	2000
Rate, inclination and temperature	42	500	500	1000	2000
Rate, acceleration, inclination and temperature	59	500	500	1000	2000
Rate and AUX	22	1000	1000	2000	2000
Rate, acceleration and AUX	32	1000	1000	2000	2000
Rate, inclincation and AUX	32	1000	1000	2000	2000
Rate, acceleration, inclination and AUX	42	500	500	1000	2000
Rate, temperature and AUX	29	1000	1000	2000	2000
Rate, acceleration, temperature and AUX	46	500	500	1000	2000
Rate, inclination, temperature and AUX	46	500	500	1000	2000
Rate, acceleration, inclination, temperature and AUX	63	500	500	1000	2000

Note 1: excluding<CR><LF> termination

Note 2: 10 bits/byte (=1 start bit, 8 data bits, no parity bit, 1 stop bit)

5.3 Datagram specifications

5.3.1 Part Number datagram

Table 5-13: S	Specification	of the Part	Number d	latagram
---------------	---------------	-------------	----------	----------

Byte#		Bit#							Specification
-	7	6	5	4	3	2	1	0	
									Part Number datagram identifier:
0	1	0	1	1	0	0	0	1	0xB1 for datagrams without CR+LF termination
	1	0	1	1	0	0	1	1	0xB3 for datagrams with CR+LF termination
1	0	0	0	0	P1₃	P1 ₂	P1 ₁	P1 ₀	Low nibble: 1.digit of part number

Normal Mode datagrams with reduced content can be chosen at order or configured in Service Mode. Overview of available datagrams can be found in Table 5-20 and in section 12. When choosing a Normal mode datagram with

reduced content, the Normal Mode datagram will be shorter. However the order of requested data will be transmitted as shown in Table 5-19. When selecting temperature in the datagram, only temperatures for the selected measurement-clusters will be transmitted, e.g. if gyro and inclinometer data have been chosen together with temperature, only temperatures for the gyros and inclinometers will be transmitted.

Datagram content	Identifier
Rate	0x90
Rate and acceleration	0x91
Rate and inclination	0x92
Rate, acceleration and inclination	0x93
Rate and temperature	0x94
Rate, acceleration and temperature	0xA5
Rate, inclination and temperature	0xA6
Rate, acceleration, inclination and temperature	0xA7
Rate and AUX	0x98
Rate, acceleration and AUX	0x99
Rate, inclination and AUX	0x9A
Rate, acceleration, inclination and AUX	0x9B
Rate, temperature and AUX	0x9C
Rate, acceleration, temperature and AUX	0xAD
Rate, inclination, temperature and AUX	0xAE
Rate, acceleration, inclination, temperature and AUX	0xAF

Table 5-20:	Normal	Mode	datagram	identifiers
-------------	--------	------	----------	-------------

5.3.7 Cyclic Redundancy Check (CRC)

At the end of all datagrams is a 32-bit Cyclic Redundancy Checksum. The CRC checksum enables the user to detect errors in the transfer of data from STIM300. The CRC is calculated using the following polynomial:

 $x^{32} + x^{26} + x^{23} + x^{22} + x^{16} + x^{12} + x^{11} + x^{10} + x^8 + x^7 + x^5 + x^4 + x^2 + x + 1$ seed = 0xFFFFFFF

All preceding data, including the datagram identifier, is included in the CRC.

The CRC-algorithm requires full sets of 32-bits (4 bytes). Several of the defined datagrams from STIM300 have a length which is not an integer number of 4 bytes. In order to have an efficient transmission of data and thereby avoid transmitting bytes with no meaningful content, dummy-byte(s) with content = 0x00 are added when the CRC of the last byte(s) is calculated.

Example: Datagram with ID=0xA7 (rate, acceleration, inclination and temperature) has been chosen. This datagram consists of 55 bytes prior to the CRC checksum. Hence this datagram consists of 13 sets of 32 bits + 3 bytes. In order to include the last 3 bytes in the CRC checksum, 1 byte = 0x00 is added, making the last data byte the least significant byte.

Table 5-21 lists the number of dummy-bytes needed to calculate the final CRC-checksum for the different datagrams in Normal Mode.

Table 5-21: Number of dummy-bytes to be added for CRC-calculation

Table 5-21. Number of dummy-bytes to be added for C		
Datagram content	Identifier	# dummy-bytes
Part Number datagram	0xB1, 0xB3	0
Serial Number datagram	0xB5, 0xB7	0
Configuration datagram	0xBC, 0xBD	2
Bias Trim offset datagram	0xD1, 0xD2	0
Extended Error Information datagram	0xBE, 0xBF	3
Rate	0x90	2
Rate and acceleration	0x91	0
Rate and inclincation	0x92	0
Rate, acceleration and inclination	0x93	2
Rate and temperature	0x94	3
Rate, acceleration and temperature	0xA5	2
Rate, inclination and temperature	0xA6	2
Rate, acceleration, inclination and temperature	0xA7	1
Rate and AUX	0x98	2
Rate, acceleration and AUX	0x99	0
Rate, inclincation and AUX	0x9A	0
Rate, acceleration, inclination and AUX	0x9B	2
Rate, temperature and AUX	0x9C	3
Rate, acceleration, temperature and AUX	0xAD	2
Rate, inclination, temperature and AUX	0xAE	2
Rate, acceleration, inclination, temperature and AUX	0xAF	1

5.4 Status byte

Table 5-22: Interpretation of bits in STATUS byte

Bit	STATUS bit information	Comment
7	0=OK, 1=System integrity error	
6	0=OK, 1=Start-Up	
5	0=OK, 1=Outside operating conditions	
4	0=OK, 1=Overload	Bits 0-2 will flag the overload channel(s)
3	0=OK, 1=Error in measurement-	Bits 0-2 will flag the error channel(s)
	channel	
2	0=OK, 1=Z-channel	
1	0=OK, 1=Y-channel	
0	0=OK, 1=X-channel (or AUX)	

Refer to section 7.6 for more information related to the self-diagnostics of STIM300.

6 MECHANICAL

Table 6-1: Mechanical specifications

Parameter	Conditions	Min Nom Max	Unit	Note
HOUSING MATERIAL		Aluminium,		
		Alloy 6082-T6, DIN EN 754-2

Note 1: Hexavalent chromium free

6.1 Mechanical dimensions

All dimensions are in mm.

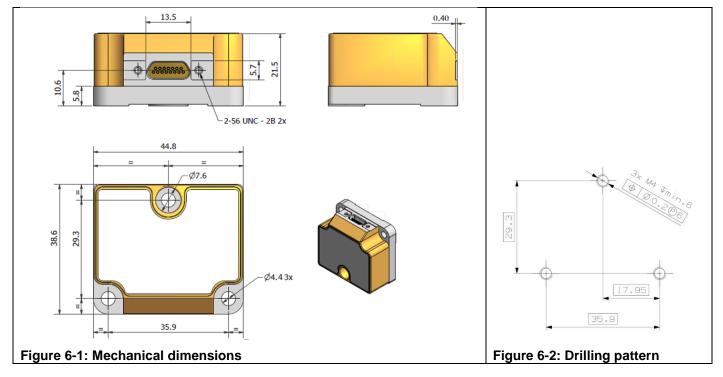

Table 6-2: Nominal position of accelerometer mass-centres (ref. Figure 6-5 for reference definition)

Axis	X-offset ¹⁾	Y-offset ¹⁾	Z-offset ¹⁾
Х	-33.4mm	-11.7mm	12.8mm
Y	-24.9mm	-5.2mm	16.0mm
Z	-24.0mm	-11.3mm	6.9mm

Note 1: Valid for rev.F and later. For rev.E, refer TS1524r16

6.2 Advice on mounting orientation

The gyros are sensitive to acceleration-forces in certain directions:

- X- and Y-gyros have their highest sensitivity to acceleration-forces in Z-direction
- Z-gyro has its highest sensitivity to acceleration-forces in Y-direction
- X-gyro has its lowest sensitivity to acceleration-forces in X-direction
- Y-gyro has its lowest sensitivity to acceleration-forces in Y-direction
- Z-gyro has its lowest sensitivity to acceleration-forces in Z-direction

6.3 Pin configuration

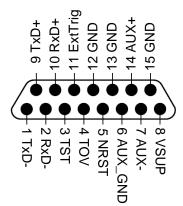

Figure 6-3: Pin configuration as seen from front of STIM300 Table 6-3: Pin descriptions

Pin#	Label	Туре	Description
1	TxD-	OUTPUT	RS422 negative output
2	RxD-	INPUT	RS422 negative input
3	TST	OUTPUT	Test pin: Do not connect
4	TOV	OUTPUT	Time of Validity (if not in use, leave floating)
5	NRST	INPUT	Reset (if not in use, connect to VSUP or leave floating)

6.4 Definition of axes

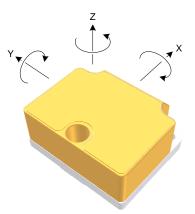

Figure 6-4: Definition of axes

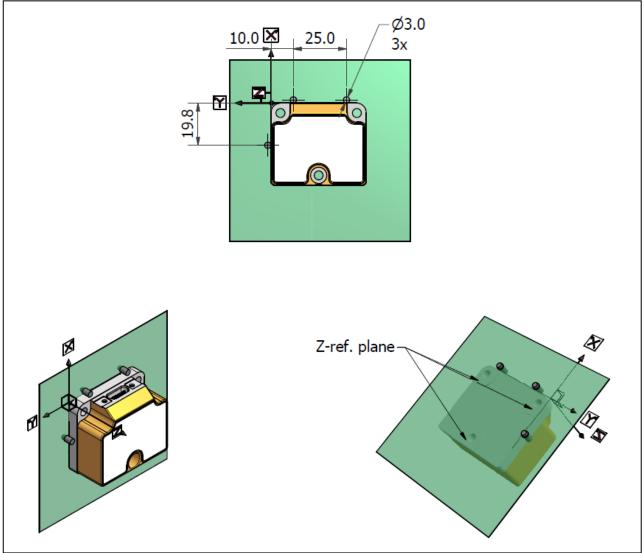

Figure 6-5: Reference points for alignment of axes

7 1BASIC OPERATION

STIM300 is very simple to use. Unless having been configured with external trigger, the unit will start performing measurements and transmit the results over the RS422 interface without any need for additional signalling or set-up after power-on. Figure 7-1 shows the simplest connection set-up for STIM300.

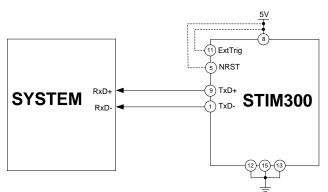

Figure 7-1: Transmit-Only Electrical Connection Diagram

In order to take full advantage of all features of STIM300, the unit needs to be connected as shown in Figure 7-2. In this set-up the system can reset the unit without having to toggle power, the external trigger function can be utilized, configuration parameters can be changed and extended information like diagnostic information can be read from the device.

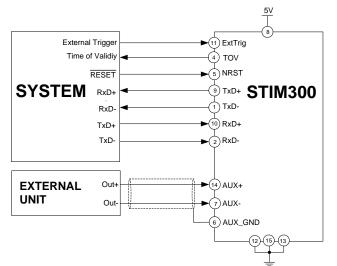

Figure 7-2: Full Function Electrical Connection Diagram

7.1 Reset

STIM300 has a separate reset pin (NRST) in order for the application to reset the unit without having to toggle power.

The reset is active low and has an internal pull-up. Hence the input could be left floating if not in use.

The reset signal is routed to the reset of the microcontroller and effectively forces STIM300 into Init Mode (ref. Figure 7-6 and section 7.5.1).

7.2 External Trigger

STIM300 has a separate digital input pin to be used when the unit has been configured to transmit only upon external trigger. The measurements themselves will be continuously running at the highest sample rate (2000 samples/s) in order to ensure shortest possible latency when a transmission is requested. The input is set to trigger on the falling edge of the input signal and will then transmit one datagram containing the result of the latest measurement.

The input has an internal pull-up. Hence the input could be left floating if not in use.

Note that when requesting one of the special Normal Mode datagrams, ref. section 8, the datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data. If several requests for special datagrams are issued prior to an external trigger, it will be the last requested special datagram that will be transmitted.

When STIM300 is in Init Mode (after Power on or Reset), it will transmit the 3 special datagrams as described in section 7.5.1 regardless of external trigger input.

The timing diagram is shown in Figure 7-3. Latency is the time between the moment at which the sample has been digitized + low pass-filtered and the receipt of the external trigger.

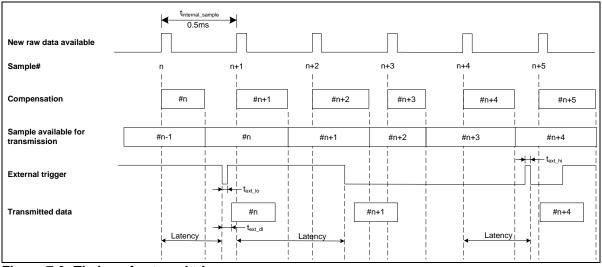

Figure 7-3: Timing of external trigger

7.3 Time of Validity (TOV)

The TOV-output serves 2 purposes:

- Provide a synchronization-signal derived from the internal clock of STIM300
- Provide means to signal when a datagram is being transmitted (NB: not when configured to external trigger)

The TOV falling edge occurs synchronous to the sample rate. The raising edge occurs after the last bit of the datagram has been transmitted.

Figure 7-4 and Figure 7-5 show the timing diagram of the TOV-output.

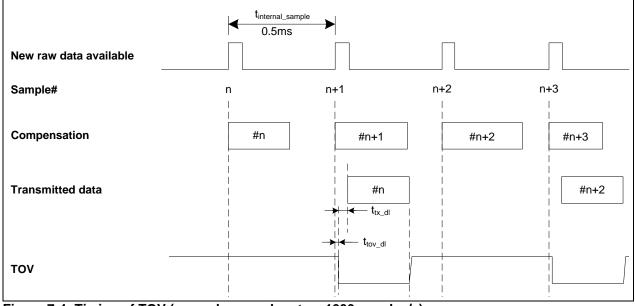

Figure 7-4: Timing of TOV (example: sample rate = 1000samples/s)

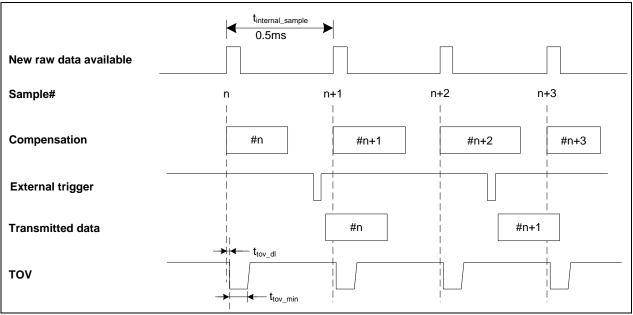

Figure 7-5: Timing of TOV with external trigger

7.4 Auxiliary input

STIM300 provides input in order to digitize an external signal. The digitizer is a 24 bit sigma-delta ADC. The AUX data (24 bits + status byte) can be included in the datagrams, ref. sections 12 and 9.4. A simple compensation of the AUX data is performed as shown in Equation 1. The AUX data will be low-pass filtered. The bandwidth can be changed in Service Mode, ref. section 9.8.

Equation 1: AUX compensation algorithm:

 $AUX _Output = A * AUX _Input + B$

where A and B are coefficients that can be programmed by the user in SERVICEMODE (k (AUX COMP)-command)

7.5 Operating modes

The operating modes of STIM300 are shown in Figure 7-6:

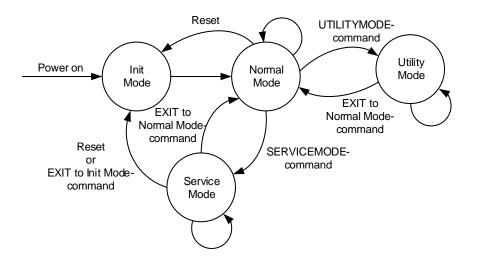

Figure 7-6: Operating modes

7.5.1 Init Mode

Init Mode is entered after the following conditions:

- power on
- after an external reset
- when receiving a reset-command in Normal Mode
- when exiting to Init Mode from Service Mode.

In Init Mode the system waits for internal references to settle, resets and synchronizes the sensor channels and transmits three or four special datagrams containing part number, serial number, configuration data and bias trim offsets (if chosen). The transmission of the bias trim offset datagram has been made configurable in order to be backward compatible with previous revisions of STIM300 (ref. section 9.16). Note that length and format of the special datagrams are different to the datagrams in Normal Mode.

The content and format of the Part Number datagram is specified in Table 5-13. The content and format of the Serial Number datagram is specified in Table 5-14. The content and format of the Configuration datagram is specified in Table 5-15. The content and format of the Bias Trim Offset datagram is specified in Table 5-16.

After having transmitted the special Part Number, Serial Number, Configuration datagrams and Bias Trim Offset data (if chosen), STIM300 enters Normal Mode.

All these special datagrams can also be requested by commands in Normal Mode, ref. Section: 8.

7.5.2 Normal Mode

In Normal Mode STIM300 will constantly transmit sensor-data at the configured sample rate. The internal sample rate will always be at the maximum regardless of the transmitted sample rate.

STIM300 will continue to transmit data regardless of any errors reported in the STATUS-bytes (ref. Table 5-22). Hence the content of the STATUS-byte should continuously be examined.

The content of the Normal Mode datagram is specified in Table 5-19.

7.5.2.1 Start-Up

When STIM300 enters Normal Mode from Init Mode, there will be a start-up period where STIM300 is stabilizing the gyros. During this period bit 6 is set in the STATUS-byte (ref. Table 5-22) to communicate its condition. Once stabilized, bit 6 will be cleared. During this period the output data should be regarded as non-valid.

There will not be any start-up period when STIM300 is exiting from Service Mode directly to Normal Mode.

7.5.2.2 Data output options and interpretation

The gyros in STIM300 measure angular rate [°/s], the accelerometers measure acceleration [g] and the inclinometers measure acceleration [g]. However, in order to make the STIM300 more versatile, a few simple functions are offered, ref. Table 7-1 and Table 7-2:

Function	Description of function	Equation	Output unit
Incremental	Adds all internal samples between two transmissions multiplied by the time between internal samples	$Incremental = \sum_{i=1}^{n} AngularRate_{i} \cdot \frac{1}{2000}s$	[°]
		n = 2000 / sample rate	
Average	Calculates the average of the internal samples between two transmissions	$Average = \frac{1}{n} \cdot \sum_{i=1}^{n} AngularRate_{i}$	[°/s]
		n = 2000 / sample rate	
Integrated	Adds all internal samples multiplied by the time between internal samples since start-up / last reset. Note that the result takes values in the interval [-4°, 4°> and will naturally wrap-around with no error- message indication in the Status- byte	$Integrated = \sum_{i=1}^{n} AngularRate_{i} \cdot \frac{1}{2000}s$ n = internal samples (at a rate of 2000 samples/s) since start-up or last reset)	[°]

Table 7-1: Implemented functions fo	r gyro output units
-------------------------------------	---------------------

Table 7-2: Implemented functions for accelerometer/inclinometer output units

Function	Description of function	Equation	Output unit
Incremental	Adds all internal samples between two transmissions multiplied by the time between internal samples and converted to [m/s]	$Incremental = k_0 \cdot \sum_{i=1}^{n} Acceleration_i \cdot \frac{1}{2000}s$ $k_0 = 9.80665 \text{ m/s}^2/\text{g}$ $n = 2000 / \text{ sample rate}$	[m/s]
Average	Calculates the average of the internal samples between two transmissions	$Average = \frac{1}{n} \cdot \sum_{i=1}^{n} Acceleration_{i}$ n = 2000 / sample rate	[ð]
Integrated	Adds all internal samples multiplied by the time between internal samples since start-up / last reset. Note that the result takes values in a specific interval as described in 7.5.2.2.10 and 7.5.2.2.14 for accelerometer and inclinometer respectively and will naturally wrap- around with no error-message indication in the Status-byte	$Integrated = \sum_{i=1}^{n} Acceleration_{i} \cdot \frac{1}{2000}s$ n = internal samples (at a rate of 2000 samples/s) since start-up or last reset	[gs]

7.5.2.2.1 Delayed gyro output

The inherent group delay of the gyro-, accelerometer-, inclinometer- and AUX-signals are different, ref. Table 5-3, Table 5-4, Table 5-5, Table 5-6, Table 5-7, Table 5-8 and Table 5-9 respectively.

An option is available to delay the gyro signals by 4.5ms in order for the group delay of gyros, accelerometers and AUX to be similar. To enable this feature, select the gyro output-unit \geq 8, ref. section 9.7 and 12.

7.5.2.2.2 Gyro output unit = Angular Rate

In the case of STIM300 being configured to output angular rate, Equation 2 and Figure 7-7 show how to convert to [°/s]. Note that the output data is represented as two's complement.

Equation 2: Converting output to [°/s]:

 $Output[^{\circ}/s] = \frac{(AR_1) \cdot 2^{16} + (AR_2) \cdot 2^8 + (AR_3) - (AR_{b23}) \cdot 2^{24}}{2^{14}}$

where AR₁ is the most significant byte of the 24bit output

AR₂ is the middle byte of the 24bit output

AR₃ is the least significant byte of the 24bit output

AR_{b23} is the most significant bit of AR₁

			– AR	1 —				◄			– AR	2				◀			- AR₃

Figure 7-7: Converting output bytes to [°/s]

7.5.2.2.3 Gyro output unit = Incremental Angle

In the case of STIM300 being configured to output incremental angle per sample, the equations for conversion to [°/sample] can be found in Equation 3 and Figure 7-8. Note that the output data is represented as two's complement.

Equation 3: Converting output to [°/sample]

$$Output[^{\circ} / sample] = \frac{(IA_1) \cdot 2^{16} + (IA_2) \cdot 2^8 + (IA_3) - (IA_{b23}) \cdot 2^{24}}{2^{21}}$$

where IA_1 is the most significant byte of the 24bit output IA_2 is the middle byte of the 24bit output IA_3 is the least significant byte of the 24bit output IA_{b23} is the most significant bit of IA_1

			– IA ₁					◄			– IA ₂					•			- IA3

Figure 7-8: Converting output bytes to [°/sample]

7.5.2.2.4 Gyro output unit = Average Angular Rate

In the case of STIM300 being configured to output average angular rate, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four previous internal samples.

Note that the configured low-pass filtering is performed prior to calculating the average.

Conversion to [°/s] is the same as for angular rate and is described in Equation 2.

7.5.2.2.5 Gyro output unit = Integrated Angle

In the case of STIM300 being configured to output integrated angle, the transmitted data will be the continuously integrated angle since power-on or reset. The integrated angle will be in the interval [-4°, 4°> and will naturally wrap-around with no error-message indication in the Status-byte.

Conversion to [°] is the same as for incremental angle and is described in Equation 3.

7.5.2.2.6 Gyro g-compensation

As the STIM300 also contains accelerometers and inclinometers, functionality has been implemented to provide means to compensate for the g-sensitivity for gyro scale-factor and/or bias.

In addition, a simple 1-pole low-pass filter can be switched in to apply additional filtering of the accelerometer-/inclinometer-signal prior to use in the compensation, ref: Figure 7-10. A simplified compensation-scheme can be found in Figure 7-9.

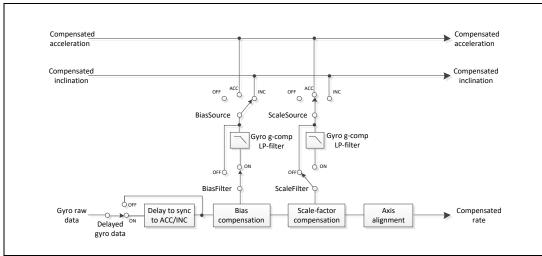

Figure 7-9: Simplified compensation-scheme for gyro g-compensation

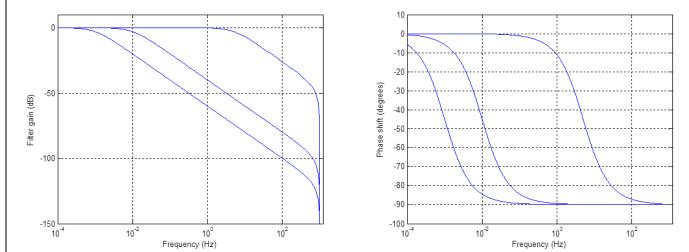

Figure 7-10: Frequency characteristics of g-compensation low-pass filter for 0.001Hz, 0.01Hz and 5Hz settings

7.5.2.2.7 Accelerometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 4 and Figure 7-11 show how to do this. Note that the output data is represented as two's complement.

7.5.2.2.8 Accelerometer output unit = Incremental Velocity

In the case of STIM300 being configured to output incremental velocity per sample, the equations for conversion to [m/s/sample] can be found in Equation 5 and Figure 7-12. Note that the output data is represented as two's complement.

Equation 5: Converting output to [m/s/sample]

Range	Conversion:
5g	$Output[m/s/sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3) - (IV_{b23}) \cdot 2^{24}}{2^{23}}$
10g	$Output[m/s/sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3) - (IV_{b23}) \cdot 2^{24}}{2^{22}}$
30g	$Output[m/s/sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3) - (IV_{b23}) \cdot 2^{24}}{2^{21}}$

Figure 7-12: Converting output bytes to [m/s/sample] (example is valid for 10g range)

7.5.2.2.9 Accelerometer output unit = Average Acceleration

In the case of STIM300 being configured to output average acceleration, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four internal samples.

Conversion to [g] is the same as for acceleration and is described in Equation 4.

7.5.2.2.10 Accelerometer output unit = Integrated Velocity

In the case of STIM300 being configured to output integrated velocity, the transmitted data will be the continuously integrated velocity since power-on or reset. The integrated velocity will be in the interval as shown in Table 7-3 and will naturally wrap-around with no error-message indication in the Status-byte.

Table 7-3: Interval for integrated velocity

Range	Interval:
5g	[-1gs, 1gs>
10g	[-2gs, 2gs>
30g	[-4gs, 4gs>
80g	[-16gs, 16gs>

Conversion to [gs] is the same as for incremental velocity and is described in Equation 5.

7.5.2.2.11 Inclinometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 6 and Figure 7-13 show how to do this. Note that the output data is represented as two's complement.

Equation 6: Converting output to [g]:

 $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3) - (ACC_{b23}) \cdot 2^{24}}{2}$

Figure 7-14: Converting output bytes to [m/s/sample]

7.5.2.2.13 Inclinometer output unit = Average Acceleration

In the case of STIM300 being configured to output average acceleration, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four internal samples.

Conversion to [g] is the same as for acceleration and is described in Equation 6.

7.5.2.2.14 Inclinometer output unit = Integrated Velocity

In the case of STIM300 being configured to output integrated velocity, the transmitted data will be the continuously integrated velocity since power-on or reset. The integrated velocity will be in the interval [-0.25gs, 0.25gs> and will naturally wrap-around with no error-message indication in the Status-byte.

Conversion to [gs] is the same as for incremental velocity and is described in Equation 7.

7.5.2.2.15 Temperature

Temperature data for each axis is available in certain datagrams (ref. section 12).

Equation 8 and Figure 7-15 show how to convert to [°C]. Note that the output data is represented as two's complement.

Equation 8: Converting temperature data to [°C]

 $Output[^{\circ}C] = \frac{(T_1) \cdot 2^8 + (T_2) - (T_{b15}) \cdot 2^{16}}{2^8}$

where T_1 is the most significant byte of the 16bit output T_2 is the least significant byte of the 16bit output T_{b15} is the most significant byte of T_1

Figure 7-16: Converting output bytes to [V]

7.5.2.2.17 Counter

Counter is continuously counting the internal samples (2000 samples/s). Counter is an un-signed single byte taking values in the interval [0, 255]. The counter will naturally wrap-around with no error-message indication in the Statusbyte.

7.5.2.2.18 Latency

To calculate the latency in [µs], refer to Equation 10 and Figure 7-17. Note that latency is an unsigned word.

Equation 10: Converting output to [µs]:

 $Output[\mu s] = (LT_1) \cdot 2^8 + (LT_2)$

where LT₁ is the most significant byte of the 16bit output

LT₂ is the least significant byte of the 16bit output

Figure 7-17: Converting output bytes to [µs]

7.5.2.3 Bias Trim Offset

The STIM300 offers the possibility to trim the biases by adding user-defined offsets to the individual sensor signals. Adjusting the bias trim offsets can be done by entering Bias Trim Offset Mode (ref. section 7.5.4) or Service Mode (ref. section 9.12).

The bias trim offsets are applied to the sensor-signals after the compensation-algorithms with the sign-convention as shown in Equation 11:

Equation 11: Applying bias trim offsets:

Sensor_{adjusted} = *Sensor_{compensated}* + BiasTrimOffset

where Sensor_{adjusted} is the sensor-data to be transmitted Sensor_{compensated} is the sensor-data after compensation BiasTrimOffset is the current bias trim offset for the particular sensor axis

Note that the bias trim offset is in [°/s] for the gyros and [g] for the accelerometers and inclinometers. This is also the case if the chosen output unit is incremental or integrated.

7.5.3 Service Mode

In Service Mode the communication interface is human readable and hence the communication format (ASCII) supports the use of terminal-based software during the development phase, when the configuration of a device needs to be changed or during investigations into an observed problem.

When Service Mode is entered, STIM300 will respond with its configuration information (same as the response to the \underline{i} (INFORMATION) command, ref: Figure 9-1).

A set of commands are available, ref. Section 9, enabling the user to change intermediately or permanently the configuration parameters, display latest measurement results, display higher details on error information and perform a full diagnostic of the unit.

In Service Mode the gyro measurements will still be running in the background, enabling to switch directly back to Normal Mode without the need for any stabilisation time of filters, etc. However the measurement data itself, when STIM300 is in Service Mode are not transmitted and therefore lost. By using the <u>a</u> (SINGLE-SHOT MEASUREMENT) command (ref. Section 9.2) it is possible to display single measurement results.

Exiting Service Mode can be done in several ways:

- 1. Using the external reset. This will force STIM300 into Init Mode. Be advised that during Init Mode, all the configuration parameters are loaded from flash. If any of the configuration parameters have been changed during the Service Mode session but not saved to flash, these changes will be overwritten by the content already stored in flash.
- 2. Using the <u>x</u> (EXIT) command. When using this command a parameter is required to decide whether the device should go to Init Mode or to Normal Mode. When exiting to Normal Mode, any of the changes made to the configuration parameters will still be valid. However, if not saved, the configuration parameters will be overwritten by the content already stored in flash at the next power-up or reset.

7.5.4 Utility Mode

The Utility Mode is similar to Service Mode (ref. section 7.5.3) but made for machine-machine communication. All commands and responses includes CRC-8 to detect any errors in the communication.

After having received the "UTILITYMODE"-command (ref. section 8.8), STIM300 will stop transmitting Normal Mode datagrams and send an acknowledgement that it is now in Utility Mode (ref. section 10.1). Even though the Normal Mode datagrams are not transmitted, the measurements will continue in the background.

Several commands are available to obtain information or change configuration parameters, ref. section 10.

When the Utility Mode is exited, the STIM300 will return to Normal Mode and resume transmission of Normal Mode datagrams.

7.6 Self-diagnostics

STIM300 is continuously checking its internal status. The checks include:

- o Check of internal references
- \circ $\;$ Check of sensors (error and overload)
- Check of internal temperatures
- Check of RAM and flash
- Check of supply voltage

A full diagnostic can be run to see the result of the individual checks by using the <u>c</u> (DIAGNOSTIC) command, ref. Section 9.3 in SERVICEMODE.

When an error situation is detected, the corresponding bit in the STATUS byte (ref. Table 5-22) will be set. If the sample-rate is set lower than 2000 samples/s, the STATUS byte will reflect the accumulated status of all the sub-samples between two data transmissions. The bits in the STATUS bytes are valid for the data in a single transmission and hence not latched.

Access to extended error registers containing accumulated error-information can be achieved either by using the Normal Mode-command "E" (EXTENDED ERROR INFORMATION DATAGRAM, ref. section 8.5 and Table 5-18) or the SERVICEMODE-command <u>ie</u> (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 9.1).

The extended error registers are cleared at the following events:

- After the start-up phase, triggered by power-on or reset
- After transmission of Extended Error Information Datagram (ref. section 8.5)
- After use of SERVICEMODE-command "i e" (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 9.1)

8 COMMANDS IN NORMAL MODE

Several commands are available in Normal Mode, as listed in Table 8-1. Note that all commands in Normal Mode must be transmitted in upper case letters.

Table 8-1 Available	commands in	Normal Mode

Command	Short description
N	Transmits one Part Number datagram
I	Transmits one Serial Number datagram
С	Transmits one Configuration datagram
Т	Transmits one Bias Trim Offset datagram
E	Transmits one Extended Error Information datagram
R	Resets the unit
SERVICEMODE	Enters Service Mode
UTILITYMODE	Enters Utility Mode

Table 8-2 List of special ASCII characters used in Normal Mode

Char	Hex	Dec	Short description
<cr></cr>	0x0D	13	"Carriage Return": used as execution character for commands

No echo of received command characters or error messages will appear for these commands. Only at the receipt of the complete correct command, will STIM300 execute accordingly.

NB: if OUTPUT-UNIT is set to INCREMENTAL (ref. Section 9.7), the transmitted incremented value in the datagram following any of the requested special datagrams will NOT contain the incremental value since the last transmitted measurement. Hence the incremented value(s) occurring during the transmission of a special requested datagram will be lost.

8.1 N (PART NUMBER DATAGRAM) command

General description: Requests transmission of a Part Number datagram (ref. Table 5-13).

Table 8-3 : Available I (PART NUMBER DATAGRAM) command

Syntax	Response
N <cr></cr>	Transmits one Part Number datagram

The Part Number datagram will replace the next transmitted Normal Mode datagram. If the Part Number datagram is longer than the chosen Normal Mode datagram, the Part Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Part Number datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

8.2 I (SERIAL NUMBER DATAGRAM) command

General description: Requests transmission of a Serial number datagram (ref. Table 5-14).

Table 8-4 : Available I (SERIAL NUMBER DATAGRAM) command

Syntax	Response
I <cr></cr>	Transmits one Serial Number datagram

The Serial Number datagram will replace the next transmitted Normal Mode datagram. If the Serial Number datagram is longer than the chosen Normal Mode datagram, the Serial Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Serial Number datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

8.3 C (CONFIGURATION DATAGRAM) command

General description: Requests transmission of a Configuration datagram (ref. Table 5-15).

Table 8-5: Available C (CONFIGURATION DATAGRAM) command

Syntax	Response
C <cr></cr>	Transmits one Configuration datagram

The Configuration datagram will replace the next transmitted Normal Mode datagram. If the Configuration datagram is longer than the chosen Normal Mode datagram, the Configuration datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Configuration datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

8.4 T (BIAS TRIM OFFSET DATAGRAM) command

General description: Requests transmission of a Bias Trim Offset datagram (ref. Table 5-16).

Table 8-6: Available B (BIAS TRIM OFFSET DATAGRAM) command

Syntax	Response
T <cr></cr>	Transmits one Bias Trim Offset datagram

The Bias Trim Offset datagram will replace the next transmitted Normal Mode datagram. If the Bias Trim Offset datagram is longer than the chosen Normal Mode datagram, the Bias Trim Offset datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Bias Trim Offset datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

8.5 E (EXTENDED ERROR INFORMATION DATAGRAM) command

General description: Requests transmission of an Extended Error Information datagram (ref. Table 5-17). This datagram contains the accumulated detected errors (ref. section 7.6).

Once the Extended Error Information datagram has been transmitted, the error-registers are cleared.

Table 8-7: Available E (EXTENDED ERROR INFORMATION) command

Synt	ax	Response
E <ci< th=""><th>२></th><th>Transmits one Extended Error Information datagram</th></ci<>	२>	Transmits one Extended Error Information datagram

The Extended Error Information datagram will replace the next transmitted Normal Mode datagram. If the Extended Error Information datagram is longer than the chosen Normal Mode datagram, the Extended Error Information datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Extended Error Information datagram will be transmitted at the next external trigger input, replacing the datagram containing sensor data.

8.6 R (RESET) command

General description: Force a Reset

Table 8-8: Available R (RESET) command

Syntax	Response	
R <cr></cr>	Resets the unit	

8.7 SERVICEMODE command

General description : Enters Service Mode (ref. section 7.5.2.3).

Table 8-9: Available SERVICEMODE command

Syntax	Response
SERVICEMODE <cr></cr>	Enters Service Mode

If the command is received during the transmission of a datagram, it will complete the transmission before entering Service Mode.

When entering Service Mode, the configuration and identification data of the device will be listed, as shown in Figure 8-1:

SERIAL NUMBER = N25582016002002

8.8 UTILITYMODE command

General description: Enters Utility Mode allowing the user to obtain information or change configuration parameters (ref. section 7.5.4).

Table 8-10: Available UTILITYMODE command

Syntax	Response
UTILITYMODE <cr></cr>	Enters Utility Mode

If the command is received during the transmission of a datagram, it will complete the transmission before entering Utility Mode.

For response to the UTILITYMODE command and other commands in Utility Mode, see section 10.

9 COMMANDS IN SERVICE MODE

Several commands are available in Service Mode, as listed in Table 9-1. Note that all commands in Service Mode are case-sensitive (commands are lower case letters, whilst some parameters may be capital case letters).

Note that backward compatibility in Service Mode responses is not guaranteed.

Table 9-1 Available commands in Service	Mode
-----------------------------------------	------

Command		
i Lists specific information (e.g. serial number, configuration, error information)		
a Performs a single-shot measurement		
c Performs a diagnostic of the unit		
d	Changes datagram format	
t	Changes transmission parameters (e.g. bit-rate, data-length, stop-bits)	
r	Turns line termination ON or OFF	
u	Changes measurement output unit	
f	Changes LP filter -3dB frequency	
m	Changes sample rate	
k	Changes coefficients of the AUX compensation algorithm	
g	Changes the gyro g-compensation configuration for bias and scale factor	
b	Changes bias trim offsets	
S	Saves configuration data	
х	Exits Service Mode and returns to Normal Mode or Init Mode	
Z	Restore to factory settings	
h	Changes defined system configurations	
?	Help function on the available commands in Service Mode	

Table 9-2 List of special ASCII characters used in Service Mode

Char	Hex	Dec	Short description
<bs></bs>	0x08	8	"Back Space": deletes last received character (received since last <cr>)</cr>
<cr></cr>	0x0D	13	"Carriage Return": typically used as execution character for commands
<sp></sp>	0x20	32	"Space": used to separate command and first parameter
í , ,	0x2C	44	"Comma": used to separate parameters in a command
'>'	0x3E	62	Used together with <cr> as: "Ready to receive new command"-prompt</cr>

When STIM300 is in Service Mode and ready to receive a new command, it will issue the special ASCII character <CR> followed by '>'. As some commands (e.g. SINGLE-SHOT MEASUREMENT-command) may respond with a varying number of lines, automated set-ups should look for the special prompt-sequence (<CR>+'>') before issuing a new command.

Received characters will be echoed. A command is decoded and executed when receiving the special ASCII character <CR>. <BS> ("back-space") is also recognised and will delete the last received character in the input buffer. The size of the input buffer is 80 characters. <BS> is valid for the characters received since last <CR>.

The command-character and first parameter (when applicable) are separated by a space (character 0x20). When there are more than one parameter to a command (e.g. TRANSMISSION PARAMETER-command), these must be separated by a comma (character 0x2C).

In the event of an unknown command, inconsistent syntax or incorrect value of parameter(s), STIM300 will respond with an error message. Error messages are on the format:

E<nnn><SP><Error description><CR>

where nnn is an error number

9.1 i (INFORMATION) command

General description: Lists various requested information about the device

Table 9-3 : Available i (INFORMATION) commands

Syntax	Response
i <cr></cr>	Lists the product configuration and identification data
i <sp><cmd><cr> Gives information about the specific parameter</cr></cmd></sp>	

Table 9-4 : Allowed values for <cmd> parameter for i (INFORMATION) commands

<cmd></cmd>	Result	
S	Returns the serial number of the device	
n	Returns the product name of the device	
X	Returns the part number of the device	
а	Returns the axis configuration of the device	
р	Returns the FW configuration and revision of the device	
m	Returns the sample rate of the device	
f	Returns the LP filter -3dB frequency for each axis	
d	Returns the datagram format	
t	Returns the transmission parameters of the device	
r	Returns the line termination (ON or OFF)	
u	Returns the output units of the device	
g	Returns the configuration of the gyro g-compensation	
b	Returns the bias trim offsets	
k	Returns the compensation coefficients for AUX input	
е	Prints the extended error information from the accumulated detected error(s) since last error	
	read-out in Service Mode or by the E-command in Normal Mode (ref. section 8.5)	
h	Returns the settings of the defined system configurations	

Table 9-5: Error messages for i (INFORMATION) commands

Error	Message	Possible reason

9.3 c (DIAGNOSTIC) command

General description: Performs a diagnostic of the unit.

Table 9-8: Available c (DIAGNOSTIC) command

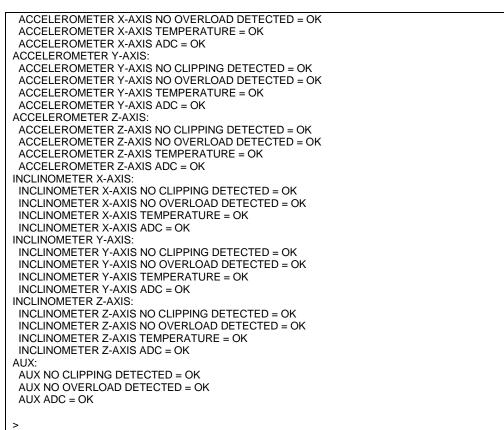

Syntax	Response
c <cr></cr>	Performs a diagnostic check

Table 9-9: Error messages for c (DIAGNOSTIC) command

Error	Message	Possible reason
E001	UNKNOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF PARAMETERS	Any characters between command and <cr></cr>

9.4 d (DATAGRAM FORMAT) command

General description: Sets the datagram transmission mode and termination (ref.Table 5-11 and section 12).

Note that the datagram format could be considered invalid, even if it has been entered correctly. This is because a valid datagram format also depends on the chosen sample rate and bit rate (ref. Table 5-12 and error message E007 in Table 9-13).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Table 9-10 : Available d (DATAGRAM FORMAT) command

Syntax	Response
d <sp><type>','<term><cr></cr></term></type></sp>	Changes the datagram transmission mode and termination in Normal
	Mode

9.5 t (TRANSMISSION PARAMETERS) command

General description: Changes the transmission parameters for the RS422 interface.

Note that the bit-rate could be considered invalid, even if it has been entered correctly. This is because a valid bit-rate also depends on the sample rate and chosen datagram content (ref. Table 5-12 and error message E007 in Table 9-18).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.11). If confirmation to the SAVE-command is not "Y", the transmission parameters will be reset to the previously stored settings. In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Note that USB-based evaluation kit works at bit-rates \leq 1.5Mbit/s and at bit-rate = 2Mbit/s and 3Mbits/s.

Table 9-14 : Available t (TRANSMISSION PARAMETERS) commands

Syntax	Response
t <sp><bit-rate code=""><cr></cr></bit-rate></sp>	Changes the transmission bit-rate and leaves number
	of stop-bits and parity unchanged
t <sp><bit-rate code="">','<stop-bits>','<parity><cr></cr></parity></stop-bits></bit-rate></sp>	Changes the transmission bit-rate, number of stop-bits
	and parity
t <sp>'f,'<bit-rate><cr></cr></bit-rate></sp>	Changes the transmission bit-rate to a user-defined bit-
	rate and leaves number of stop-bits and parity
	unchanged, ref.section 9.5.1
t <sp>'f,'<bit-rate>','<stop-bits>','<parity><cr></cr></parity></stop-bits></bit-rate></sp>	Changes the transmission bit-rate to a user-defined bit-
	rate, number of stop-bits and parity, ref.section 9.5.1

Table 9-15: Allowed values for <bit-rate code> parameter for t (TRANSMISSION PARAMETERS) commands

 bit-rate code>	Result	
0	Will set the bit-rate to 374400 bits/s	
1	Will set the bit-rate to 460800 bits/s	
2	Will set the bit-rate to 921600 bits/s	
3	Will set the bit-rate to 1843200 bits/s	

Table 9-16: Allowed values for <stop-bits> parameter for t (TRANSMISSION PARAMETERS) commands

<stop-bits></stop-bits>	Result	
1	Will set number of stop bits to 1	
2	Will set number of stop bits to 2	

Table 9-17: Allowed values for <parity> parameter for t (TRANSMISSION PARAMETERS) commands

<parity></parity>	Result	
0	Will set no parity	
1	Will set odd parity	
2	Will set even parity	

9.5.1 User-defined bit-rate

The STIM300 hardware is capable of setting bit-rates in the range between 1500 and 5184000 bits/s. However, the sample rate and the datagram length decide the minimum bit-rate possible, ref. Equation 12:

Equation 12: Minimum bit-rate

 $Bit - rate_{MIN} = 1.1 \cdot bits \cdot bytes \cdot sample _ rate$

where bits = start-bit (1) + data-bits (8) + stop-bits (1 or 2) + parity-bit (0 or 1) = number of bytes in the chosen datagram including <CR><LF>, ref. Table 5-19 and Table 5-12 (NB: number of bytes in Table 5-12 excludes <CR><LF>) sample rate is the chosen sample rate [samples/s]

If a bit-rate, lower than the allowed bit-rate defined by Equation 12, is entered, the command will respond with error message E007, ref. Table 9-18.

There are a finite number of bit-rates possible to set. This is defined in Equation 13:

Equation 13: Set bit-rate

$$Bit - rate_{SET} = \frac{82944000}{n} bits / s$$

where n is an integer

The actually set bit-rate will hence be the closest to requested bit-rate. The response of the t (TRANSMISSION PARAMETERS)-command will be the set bit-rate. Be aware that for certain bit-rates above 1.5Mbit/s, the deviation between the requested bit-rate and set bit-rate could be larger than 1% and may be in conflict with the RS422 specification. No warnings are issued related to this issue. As a safety precaution, the new bit-rate can only be permanently set by using the s (SAVE)-command (using the new bit-rate).

Table 9-18: Error messages for t (TRANSMISSION PARAMETERS) commands

Error	Message	Possible reason
E001	UNKNOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF	Too many or too few parameters, use of comma between
	PARAMETERS	command and first parameter
E003	INVALID PARAMETER	Value of parameter outside valid range
E007	DATAGRAM WILL BE TOO LONG	Combination of bit-rate, sample rate and datagram content results
	TO TRANSMIT	in a datagram that cannot be transmitted

>t 2,1,2 BIT-RATE [bits/s] = 921600 DATA LENGTH = 8 STOP BITS = 1 PARITY = EVEN

Figure 9-24: Example of response from t (TRANSMISSION PARAMETERS) command to set standard bit-rate

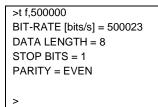

Figure 9-25: Example of response from t (TRANSMISSION PARAMETERS) command to set user-defined bitrate

9.6 r (LINE TERMINATION) command

General description: Turns the line termination ON or OFF. Line termination should be ON when communicating point-point (single master – single slave).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Table 9-19: Available r (LINE TERMINATION) command

Syntax	Response
r <sp><lineterm><cr></cr></lineterm></sp>	Changes the line termination

Table 9-20: Allowed values for r (LINE TERMINATION) command

<pre>lineterm> Result</pre>	
0	Turns line termination OFF
1 Turns line termination ON	

Table 9-21: Error messages for r (LINE TERMINATION) command

Error	Message	Possible reason

>r 1 LINE TERMINATION = ON

Figure 9-27: Example of response from r 1 (LINE TERMINATION) command

9.7 u (OUTPUT UNIT) command

General description: Sets the output unit of the transmission in Normal Mode.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Table 9-22: Available u (OUTPUT UNIT) command

Syntax		Response
u <sp>'<sens>','<unit< th=""><th>><cr></cr></th><th>Changes the unit of the transmission in Normal Mode</th></unit<></sens></sp>	> <cr></cr>	Changes the unit of the transmission in Normal Mode

Table 9-23: Allowed values for <sens> and <unit> for u (OUTPUT UNIT) command

<sens></sens>	<unit></unit>	Result	
g	0	Changes the gyro output unit to angular rate [°/s]	
g	1	Changes the gyro output unit to incremental angle [°/sample]	
g	2	Changes the gyro output unit to average angular rate [°/s]	
g	3	Changes the gyro output unit to integrated angle [°]	
g	8	Changes the gyro output unit to angular rate – delayed [°/s]	
g	9	Changes the gyro output unit to incremental angle – delayed [°/sample]	
g	а	Changes the gyro output unit to average angular rate – delayed [°/s]	
g	b	Changes the gyro output unit to integrated angle – delayed [°]	
а	0	Changes the accelerometer output unit to acceleration [g]	
а	1	Changes the accelerometer output unit to incremental velocity [m/s/sample]	
а	2	Changes the accelerometer output unit to average acceleration [g]	
а	3	Changes the accelerometer output unit to integrated velocity [gs]	
i	0	Changes the inclinometer output unit to acceleration [g]	
i	1	Changes the inclinometer output unit to incremental velocity [m/s/sample]

Figure 9-29: Example of response from u (OUTPUT UNIT) command

9.8 f (LP FILTER -3dB FREQUENCY) command

General description: Changes the low-pass filter -3dB frequency for one or all axes.

Note that low pass filter settings should be considered together with sample rate in order to avoid issues with folding. No warnings will be issued by STIM300 if e.g. a high filter bandwidth and a low sample rate have been chosen. For more details, see Application Note TS1670: "Considerations related to sampling rate and filter settings".

Note that change in filter setting will change the group delay, ref. Table 5-11.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Table 9-25: Available f (LP FILTER -3dB FREQUENCY) commands

Syntax	Response
f <sp><-3dBfreq><cr></cr></sp>	Changes the LP filter -3dB frequency for all sensors and axes
f <sp><-3dBfreq>','<sens><cr></cr></sens></sp>	Changes the LP filter -3dB frequency for all axes of a specific sensor

9.12 b (BIAS TRIM OFFSET) command

General description: Changes bias trim offsets.

Refer to section 7.5.2.3 for a description of this functionality.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 9.12). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 9.14).

Table 9-42: Available b (BIAS TRIM OFFSET) commands

Syntax	Response
b <sp><biastrimoffset><cr></cr></biastrimoffset></sp>	Sets the bias trim offsets for all sensors and axes.
	Command is useful when clearing all bias trim offsets
b <sp><biastrimoffset>','<sens><cr></cr></sens></biastrimoffset></sp>	Sets the bias trim offsets for a specific sensor, all axes.
	Command is useful when clearing all bias trim offsets for
	a given sensor
b <sp><deltabiastrimoffset>','<sens>','<axis><cr></cr></axis></sens></deltabiastrimoffset></sp>	Adjusts the bias trim offsets for a specific sensor and
	axis. <deltabiastrimoffset> is added to the current bias</deltabiastrimoffset>
	trim offset
b <sp><refinfo>',r'<cr></cr></refinfo></sp>	Sets the Reference Information. <refinfo> is a 32-bit</refinfo>
	unsigned integer that can be used to define a reference
	to the bias trim offsets, e.g. a date code

If the bias trim offsets are programmed outside the specified min or max limits, ref. Table 5-3, Table 5-4 Table 5-5, Table 5-6, Table 5-7 and Table 5-8, the relevant bias trim offsets will be set to min or max, whichever is the closest to the requested value and flagged by error message E008, ref. Table 9-46.

Table 9-43: Allowed values for <sens> parameter for b (BIAS TRIM OFFSET) commands

<sens></sens>	Result
g	Will change bias trim offset for the gyro(s)
а	Will change bias trim offset for the accelerometer(s)
i	Will change bias trim offset for the inclinometer(s)

9.13 s (SAVE) command

General description: Saves configuration parameters to flash. This will permanently change the configuration parameters and hence be valid after an initialisation or power-off.

The flash used in STIM300 is specified to be capable of minimum 10,000 saves. A save-counter has been implemented and when the number of saves exceeds 10,000, there will be issued a warning. STIM300 will always attempt to save the configuration when receiving the s (SAVE) command regardless of the content of the save-counter.

Table 9-47: Available s (SAVE) command

Syntax	Response	
s <cr></cr>	Response Saves system parameters to flash. This command will require an additional confirmation prior to execution. Confirmation ("Y") to be responded in upper case letter. If transmission parameters have been changed (ref. TRANSMISSION PARAMETERS command, section 9.5) AND confirmation to the save-command is not "Y", then the transmission parameters, including bit-rate, will be reset to the previously saved settings. NB: Do not turn off power until the ready-prompt (">") has been received	

Table 9-48: Error messages for s (SAVE) command

Error	Message	Possible reason
E001	UNKNOWN COMMAND	Command is incorrectly entered
E002	INCORRECT NUMBER OF	Any characters between command and <cr></cr>
	PARAMETERS	
E003	INVALID PARAMETER	Value of parameter outside valid range
E004	EXCEEDED MAXIMUM NUMBER OF	Warning appears when maximum number of saves has been
	SAVES	exceeded (10,000 saves). STIM300 will always attempt to save
		the configuration when receiving the <u>s</u> (SAVE)-command.
E005	ERROR DURING SAVE	System parameters not successfully transferred to flash

>S

SYSTEM PARAMETERS WILL BE PERMANENTLY CHANGED. CONFIRM SAVE(Y/N): Y SYSTEM PARAMETERS SUCCESSFULLY STORED IN FLASH. NUMBER OF SAVES = 26

9.14 x (EXIT) command

General description: Terminates Service Mode and returns to Normal Mode directly or via Init Mode (ref. Figure 7-6).

Т	Table 9-49 : Available x (EXIT) command		
	Syntax	Response	
	x <sp><exit_to><cr></cr></exit_to></sp>	Terminates Service Mode	

Table 9-50 : Allowed values for <exit_to> for x (EXIT) command

<exit_to></exit_to>	Result
n	Terminates Service Mode and return to Normal Mode. If system parameters have been changed compared to flash content, a confirmation is requested before exiting to Normal Mode ("Y" in upper case letter). There will be a 3 seconds hold-time between the transmitted command response and execution of the EXIT-command.
i	Terminates Service Mode and return to Init Mode. If system parameters have been changed compared to flash content, a confirmation is requested before exiting to Normal Mode ("Y" in upper case letter). There will be a 3 seconds hold-time between the transmitted command response and execution of the EXIT-command. NB: Changes made to system parameters, but not saved, will be overwritten by the data already stored in flash when entering Init Mode.
N	Terminates Service Mode and return immediately to Normal Mode (without confirmation if system parameters have been changed compared to flash and without any hold-time)
Ι	Terminates Service Mode and return immediately to Init Mode (without confirmation if system parameters have been changed compared to flash and without any hold- time). NB: Changes made to system parameters, but not saved, will be overwritten by the data already stored in flash when entering Init Mode.

Table 9-51: Error messages for x (EXIT) command

Error	Message	Possible reason

10 COMMANDS IN UTILITY MODE

Several commands are available in Utility Mode, ref. Table 10-1:

Command	Command	Description	Ref. section
group		•	
General	\$isn	Returns the product serial number	10.3.1
General	\$in	Returns the product name	10.3.2
General	\$ix	Returns the part number	10.3.3
General	\$ihw	Returns the HW configuration	10.3.4
General	\$ifw	Returns the FW configuration	10.3.5
General	\$iax	Returns the axis configuration	10.3.6
General	\$irng	Returns the measurement ranges	10.3.7
General	\$im	Returns the sampling rate	10.3.8
General	\$igf	Returns the LP filter -3dB frequency of the gyros	10.3.9
General	\$iaf	Returns the LP filter -3dB frequency of the accelerometers	10.3.10
General	\$iif	Returns the LP filter -3dB frequency of the inclinometers	10.3.11
General	\$iuf	Returns the LP filter -3dB frequency of the AUX signal	10.3.12
General	\$iaux	Returns calibration coefficients for AUX signal	10.3.13
General	\$id	Returns the datagram format	10.3.14
General	\$it	Returns the RS422 transmission parameters	10.3.15
General	\$igu	Returns the output unit of the gyros	10.3.16
General	\$iau	Returns the output unit of the accelerometers	10.3.17
General	\$iiu	Returns the output unit of the inclinometers	10.3.18
General	\$ig	Returns the configuration of the gyro g-compensation	10.3.19
General	\$iconf	Returns setting of system configuration	10.3.20
General	\$ie	Returns the accumulated extended error information and resets the	10.3.21
		accumulated error register	
General	\$save	Saves all configuration and system parameters to flash memory	10.3.22
General	\$isv	Returns the number of remaining saves	10.3.23
General	\$xn	Terminates Utility Mode and returns to Normal Mode	10.3.24
Reconfig	\$sm	Sets the output sampling rate	10.4.1
Reconfig	\$sgf	Sets the LP filter -3dB frequency of the gyros	10.4.2
Reconfig	\$saf	Sets the LP filter -3dB frequency of the accelerometers	10.4.3
Reconfig	\$sif	Sets the LP filter -3dB frequency of the inclinometers	10.4.4
Reconfig	\$suf	Sets the LP filter -3dB frequency of the AUX signal	10.4.5
Reconfig	\$saux	Sets the calibration coefficients for AUX-signal	10.4.6
Reconfig	\$sd	Sets the datagram format	10.4.7
Reconfig	\$sgu	Sets the output unit of the gyros	10.4.8
Reconfig	\$sau	Sets the output unit of the accelerometers	10.4.9
Reconfig	\$siu	Sets the output unit of the inclinometers	10.4.10
Reconfig	\$sg	Sets the configuration of the gyro g-compensation	10.4.11
Reconfig	\$sconf	Sets system configuration	10.4.12
BTO	\$ibto	Returns the bias trim offsets	10.5.1
BTO	\$sdbto	Adjusts the bias trim offsets	10.5.2
BTO	\$sbto	Programs the bias trim offset(s)	10.5.3
BTO	\$irf	Returns the last programmed reference information for bias trim offset	10.5.4
BTO	\$srf	Programs the reference information for bias trim offset	10.5.5

Table 10-1: Available commands in Utillity Mode

Note: Use of commands that changes parameters do not permanently store the new values. The updated values will be in effect until the part is powered off or reset. To permanently store the new values, the \$save-command (ref. section 10.3.22) must be used after having updated the required parameters.

10.1 Acknowledgement for entering Utility Mode

After the "UTILITYMODE"-command has been received, the response as shown in Figure 10-1 is transmitted to acknowledge having entered Utility Mode:

#UTILITYMODE,234<CR>

Figure 10-1: Acknowledgement for entering Utility Mode

The number 234 in Figure 10-1 is the CRC of the response, ref. section 10.2.3,

10.2 Command protocol for Utility Mode

The protocol is optimized for machine – machine communication. All communication is however in readable ASCII format and all numbers are in decimal format.

10.2.1 Command string

- a) All commands start with a message start character, '\$'
- b) All characters must be in lower case letters
- c) All parameters are delimited by character: ',' (comma)
- d) Leading white space characters <SP> and <HT> are allowed in front of all parameters
- e) Decimal separator is ".", scientific notation is allowed.
- f) To ensure correct reception, last parameter is always an 8 bit CRC checksum (ref. section 10.2.3)
- g) All commands are terminated by ASCII character carriage return (<CR>)
- h) Maximum number of characters in command string (including <CR>) is 100

10.2.2 Response string

- a) All responses from the STIM300 starts with a start character '#'
- b) The first return value is the command
- c) All data are delimited by character: ',' (comma)
- d) Second value is status of the executed command (0= OK, other = error), (ref. section 10.2.4)
- e) Number of extra return values are defined for each command
- f) Last value is always an 8 bit CRC checksum to ensure correct transmission (ref. section 10.2.3)
- g) All command responses are terminated by ASCII character carriage return (<CR>)

10.2.3 Checksum

Both the command string and the response string contain a checksum as the last parameter to ensure that the string content is transmitted correctly.

The Checksum is calculated as a Cyclic Redundancy Checksum (CRC) with polynomial $X^8 + X^2 + X + 1$, seed = 0x0FF.

The checksum is calculated from ASCII values of all the characters in the proceeding string, including the start character ('\$' or '#') and the last comma in front of the checksum.

The checksum value is presented as an ASCII string with a decimal value "0" through "255"

\$isn,28<CR> #isn,0,N2558184602002,32<CR>

Figure 10-2: Example of response string with CRC checksum

10.2.4 Command status codes

The status parameter is reporting the result of decoding and processing of the given command. Table 10-2 lists the possible status codes. When status = 0 then there are no errors.

Table 10-2: List of possible status codes for commands

Status code	Reason	
0	Command execution OK	
1	Invalid command (\$ missing in start of command-string or command used on a non-configured axis)	
2	Incorrect CRC	
3	Unknown command	
4	Incorrect number of parameters	
5	Invalid parameter(s)	
6	Exceeded maximum number of saves	
7	Error during save	
8	Requested change(s) reduced due to violation of min/max limits for bias trim offset(s)	

If more than one error occurs, the lowest status code will be in the command-response.

Example of invalid command: ibto,160<CR> Response to command: #,1,180<CR>

Explanation of response:

1: # = no/invalid command

2: Status of command execution = 1 (Invalid command, ref. Table 10-2)

3: CRC-8 calculation

Figure 10-3: Example of response in case of invalid command (status code = 1)

Example of command with incorrect CRC: \$sbto,0.00123,12<CR> Response to command: #,2,139<CR>

Explanation of response:

1: # = no/invalid command

2: Status of command execution = 2 (Incorrect CRC, ref. Table 10-2)

3: CRC-8 calculation

Figure 10-4: Example of response in case of incorrect CRC (status code = 2)

Example of command with unknown command: \$dbto,0.00123,0 <cr></cr>	
Response to command: #,3,158 <cr></cr>	

Explanation of response:

1: # = no/invalid command

2: Status of command execution = 3 (Unknown command, ref. Table 10-2)

3: CRC-8 calculation

Figure 10-5: Example of response in case of unknown command (status code = 3)

Example of command with incorrect number of parameters: \$sbto,0.0123,g,y,0,2<CR> Response to command: #sbto,4,136<CR>

Explanation of response:

1: sbto = command

2: Status of command execution = 4 (Incorrect number of parameters, ref. Table 10-2)

3: CRC-8 calculation

Figure 10-6: Example of response in case of incorrect number of parameters (status code = 4)

Example of command with invalid parameter(s): \$sbto,0.0123,s,y, 60<CR> Response to command: #sbto,5,157<CR>

Explanation of response:

1: sbto = command

2: Status of command execution = 5 (Invalid parameter(s), ref. Table 10-2)

3: CRC-8 calculation

Figure 10-7: Example of response in case of invalid parameter(s) (status code = 5)

Example of command when exceeded maximum number of saves occurs: \$save,33<CR> Response to command: #save,6,0,158<CR>

Explanation of response:

1: save = command

2: Status of command execution = 6 (Exceeded maximum number of saves, ref. Table 10-2. Note: the parameters will be saved even if remaining number of saves was 0 prior to saving. However, this could eventually lead to quality issues related to the flash memory)

3. Remaining number of saves = 0 (No remaining saves)

4: CRC-8 calculation

Figure 10-8: Example of response in case of exceeded maximum number of saves (status code = 6)

Example of command when error during save occurs: \$save,33<CR> Response to command: #save,7,8848,163<CR> Explanation of response: 1: save = command 2: Status of command execution = 7 (Error during save, ref. Table 10-2) 3. Remaining number of saves = 8848 4: CRC-8 calculation Figure 10-9: Example of response in case of error during save (status code = 7) Example of command with requested change(s) reduced due to violation of min/max limits for bias trim offset(s): \$sdbto,0.01388,-0.02425,0.01724,-1,1,1,0.0083054,0.0102123,-0.0045032,252<CR> Response to command: #sdbto,8,0.02311,0.00934,-0.54432,-0.100000,0.100000,0.100000,0.0183432,-0.0134233,-0.0033322,203<CR> Explanation of response: 1: sdbto = command 2: Status of command execution: ref. Table 10-2 3: Actual programmed bias trim offset for gyro X-axis [°/s] = 0.02311 4: Actual programmed bias trim offset for gyro Y-axis [°/s] = 0.00934 5: Actual programmed bias trim offset for gyro Z-axis [°/s] = -0.54432 6: Actual programmed bias trim offset for accelerometer X-axis [g] = -0.100000 (offset set to minimum limit) 7: Actual programmed bias trim offset for accelerometer Y-axis [g] = 0.100000 (offset set to maximum limit) 8: Actual programmed bias trim offset for accelerometer Z-axis [g] = 0.100000 (offset set to maximum limit) 9: Actual programmed bias trim offset for inclinometer X-axis [g] = 0.0183432 10: Actual programmed bias trim offset for inclinometer Y-axis [g] = -0.0134233 11: Actual programmed bias trim offset for inclinometer Z-axis [g] = -0.0033322 12: CRC-8 calculation

Figure 10-10: Example of response in case of requested change(s) reduced due to violation of min/max limits for bias trim offset(s) (status code = 8)

10.3 General commands

General description: Various general commands.

Table 10-3: Available info commands

Command	Description	Ref. section
\$isn	Returns product serial number	10.3.1
\$in	Returns product name	10.3.2
\$ix	Returns part number	10.3.3
\$ihw	Returns HW configuration	10.3.4
\$ifw	Returns FW configuration	10.3.5
\$iax	Returns axis configuration	10.3.6
\$irng	Returns measurement ranges	10.3.7
\$im	Returns sampling rate	10.3.8
\$igf	Returns LP filter -3dB frequency of the gyros	10.3.9
\$iaf	Returns LP filter -3dB frequency of the accelerometers	10.3.10
\$iif	Returns LP filter -3dB frequency of the inclinometers	10.3.11
\$iuf	Returns LP filter -3dB frequency of the AUX signal	10.3.12
\$iaux	Returns calibration coefficients for AUX signal	10.3.13
\$id	Returns datagram format	10.3.14
\$it	Returns RS422 transmission parameters	10.3.15
\$igu	Returns output unit of the gyros	10.3.16
\$iau	Returns output unit of the accelerometers	10.3.17
\$iiu	Returns output unit of the inclinometers	10.3.18
\$ig	Returns configuration of the gyro g-compensation	10.3.19
\$iconf	Returns setting of system configuration	10.3.20
\$ie	Returns the accumulated extended error information and resets the	10.3.21
	accumulated error register	
\$save	Saves all configuration and system parameters to flash memory	10.3.22
\$isv	Returns the number of remaining saves	10.3.23
\$xn	Terminates Utility Mode and returns to Normal Mode	10.3.24

10.3.1 \$isn

Purpose: Provide information about product serial number

Format: \$isn, <crc><cr></cr></crc>	
Example of command: \$isn,28 <cr></cr>	
Example of response: #isn,0,N2558184602002,32 <cr></cr>	
Explanation of response:	
1: isn = command	
2: Status of command execution: ref. Table 10-2	
3: SERIAL NUMBER = N2558184602002	
4: CRC-8 calculation	

Figure 10-11: Specification and example of \$isn command

10.3.2 \$in

Purpose: Provide information about product name

Format: \$in, <crc><cr></cr></crc>
Example of command: \$in,95 <cr></cr>
Example of response: #in,0,STIM300,247 <cr></cr>
Explanation of response:
1: in = command
2: Status of command execution: ref. Table 10-2
3: PRODUCT = STIM300
4: CRC-8 calculation
igure 10-12: Specification and example of \$in command

10.3.3 \$ix

Purpose: Provide information about part number and revision

Example of command: \$ix,118 <cr></cr>	
Example of response: #ix,0,84167-440000-321,H,230 <cr></cr>	
Explanation of response:	
1: ix = command	
2: Status of command execution: ref. Table 10-2	
3: PART NUMBER = 84167-440000-321	
4: REVISION = H	
5: CRC-8 calculation	

10.3.4 \$ihw

Purpose: Provide information about hardware configuration

Format: \$ihw, <crc><cr></cr></crc>
Example of command: \$ihw,184 <cr></cr>
Example of response: #ihw,0,M5728 REV 11,215 <cr></cr>
Explanation of response:
1 : ihw = command
2: Status of command execution: ref. Table 10-2
3: HW CONFIG = M5728 REV 11
4: CRC-8 calculation

Figure 10-14: Specification and example of \$ihw command

10.3.5 \$ifw

Purpose: Provide information about firmware configuration

Format: \$ifw, <crc><cr></cr></crc>
Example of command: \$ifw,148 <cr></cr>

Example of response: #ifw,0,SWD12404 REV 0,208<CR>

Explanation of response:

1: ifw = command

2: Status of command execution: ref. Table 10-2

3: FW CONFIG = SWD12404 REV 0

4: CRC-8 calculation

Figure 10-15: Specification and example of \$ifw command

10.3.6 \$iax

Purpose: Provide information about axis configuration

Format: \$iax, <crc><cr></cr></crc>	
Example of command: \$iax,65 <cr></cr>	
Example of response: #iax,0,XYZ,XYZ,XYZ,212 <cr></cr>	
Explanation of response:	
1 : iax = command	
2: Status of command execution: ref. Table 10-2	
3: GYRO AXIS CONFIGURATION = XYZ (if no axis configured, the response will be NA)	
4: ACCELEROMETER AXIS CONFIGURATION = XYZ (if no axis configured, the response will be NA)	
5: INCLINOMETER AXIS CONFIGURATION = XYZ (if no axis configured, the response will be NA)	
6: CRC-8 calculation	

Figure 10-16: Specification and example of \$iax command

10.3.7 \$irng

Purpose: Provide information about measurement range

apose. Trovide information about measurement range	
Format: \$irng, <crc><cr></cr></crc>	
Example of command: \$irng,74 <cr></cr>	
Example of response: #irng,0,400,400,400,10,10,10,1.7,1.7,1.7,2.5,197 <cr></cr>	
Explanation of response:	
1 : irng = command	
2: Status of command execution: ref. Table 10-2	
3: GYRO RANGE, X-AXIS [°/s] = 400 (if axis is not configured, response will be NA)	
4: GYRO RANGE, Y-AXIS [°/s] = 400 (if axis is not configured, response will be NA)	
5: GYRO RANGE, Z-AXIS [°/s] = 400 (if axis is not configured, response will be NA)	
6: ACCELEROMETER RANGE, X-AXIS [g] = 10 (if axis is not configured, response will be NA)	
7: ACCELEROMETER RANGE, Y-AXIS [g] = 10 (if axis is not configured, response will be NA)	
8: ACCELEROMETER RANGE, Z-AXIS [g] = 10 (if axis is not configured, response will be NA)	
9: INCLINOMETER RANGE, X-AXIS [g] = 1.7 (if axis is not configured, response will be NA)	
10: INCLINOMETER RANGE, Y-AXIS [g] = 1.7 (if axis is not configured, response will be NA)	
11: INCLINOMETER RANGE, Z-AXIS [g] = 1.7 (if axis is not configured, response will be NA)	
12: AUX RANGE [V] = 2.5 (if axis is not configured, response will be NA)	
13: CRC-8 calculation	

Figure 10-17: Specification and example of \$irng command

10.3.8 \$im

Purpose: Provide information about output sampling rate

urpose. Provide information about output sampling rate	
Format: \$im, <crc><cr></cr></crc>	
Example of command: \$im,96 <cr></cr>	
Example of response: #im,0,4,85 <cr></cr>	
Explanation of response:	
1 : im = command	
2: Status of command execution: ref. Table 10-2	
3: SAMPLING FREQUENCY = 4 (2000 samples/s, ref. input parameters in Figure 10-35)	
4: CRC-8 calculation	
joure 10-18: Specification and example of \$ix command	I

Figure 10-18: Specification and example of \$ix command

10.3.9 \$igf

Purpose: Provide information about the gyro LP FILTER -3dB frequencies

rupose. Flovide information about the gyro LF FILTER -30b frequencies	
Format: \$igf, <crc><cr></cr></crc>	
Example of command: \$igf,189 <cr></cr>	
Example of response: #igf,0,4,4,4,113 <cr></cr>	
Explanation of response:	
1 : igf = command	
2: Status of command execution: ref. Table 10-2	
3: GYRO LP FILTER -3dB FREQUENCY, X-AXIS = 4 (256Hz, ref. input parameters in Figure 10-36 NA)	5. If axis is not configured, response will be
4: GYRO LP FILTER -3dB FREQUENCY, Y-AXIS = 4 (256Hz, ref. input parameters in Figure 10-36 NA)	5. If axis is not configured, response will be
5: GYRO LP FILTER -3dB FREQUENCY, Z-AXIS = 4 (256Hz, ref. input parameters in Figure 10-36 NA)	. If axis is not configured, response will be

6: CRC-8 calculation

Figure 10-19: Specification and example of \$igf command

10.3.10 \$iaf

Purpose: Provide information about the accelerometer LP FILTER -3dB frequencies

Format: \$iaf, <crc><cr></cr></crc>	
-------------------------------------	--

Example of command: \$iaf,192<CR>

Example of response: #iaf,0,4,4,4,51<CR>

Explanation of response:

- 1:iaf = command
- 2: Status of command execution: ref. Table 10-2
- 3: ACCELEROMETER LP FILTER -3dB FREQUENCY, X-AXIS = 4 (256Hz, ref. input parameters in Figure 10-37. If axis is not configured, response will be NA)
- 4: ACCELEROMETER LP FILTER -3dB FREQUENCY, Y-AXIS = 4 (256Hz, ref. input parameters in Figure 10-37. If axis is not configured, response will be NA)
- 5: ACCELEROMETER LP FILTER -3dB FREQUENCY, Z-AXIS = 4 (256Hz, ref. input parameters in Figure 10-37. If axis is not configured, response will be NA)
- 6: CRC-8 calculation

Figure 10-20: Specification and example of \$iaf command

10.3.11 \$iif

Purpose: Provide information about the inclinometer LP FILTER -3dB frequencies

at: \$iif, <crc><cr></cr></crc>	
ple of command: \$iif,145 <cr></cr>	
ple of response: #iif,0,0,0,0,99 <cr></cr>	
nation of response:	
= command	
tus of command execution: ref. Table 10-2	
CLINOMETER LP FILTER -3dB FREQUENCY, X-AXIS = 0 (16Hz, ref. input parameters in Figure 10-38. If axis is not configured sponse will be NA)	d,
CLINOMETER LP FILTER -3dB FREQUENCY, Y-AXIS = 0 (16Hz, ref. input parameters in Figure 10-38. If axis is not configure sponse will be NA)	d,
CLINOMETER LP FILTER -3dB FREQUENCY, Z-AXIS = 0 (16Hz, ref. input parameters in Figure 10-38. If axis is not configure	d,
sponse will be NA)	
C-8 calculation	

Figure 10-21: Specification and example of \$iif command

10.3.12 \$iuf

Purpose: Provide information about the AUX-signal LP FILTER -3dB frequency

Format: \$iuf,<CRC><CR> Example of command: \$iuf,201<CR> Example of response: #iuf,0,3,118<CR>

Explanation of response:

1 : iuf = command

2: Status of command execution: ref. Table 10-2

3: AUX LP FILTER -3dB FREQUENCY = 3 (131Hz, ref. input parameters in Figure 10-39. If axis is not configured, response will be NA) 4: CRC-8 calculation

Figure 10-22: Specification and example of \$iuf command

10.3.13 \$iaux

~f ^I IV

Pur	pose: Provide information about the calibration coefficients of AUX signal		
F	Format: \$iaux, <crc><cr></cr></crc>		
E	xample of command: \$iaux,205 <cr></cr>		
E	Example of response: #iaux,0,1.0000000,0.0000000,126 <cr></cr>		
E	Explanation of response:		
1	: id = command		
2	2: Status of command execution: ref. Table 10-2		
3	: AUX COMPENSATION COEFFICIENT A [] = 1.0000000		
4	: AUX COMPENSATION COEFFICIENT B [V] = 0.0000000		
5	:: CRC-8 calculation		
Figure 10-23: Specification and example of \$iaux command			

10.3.14 \$id

Purpose: Provide information about the datagram format

Format: \$id, <crc><cr></cr></crc>
Example of command: \$id,221 <cr></cr>

Example of response: #id,0,0,103<CR>

Explanation of response:

1: id = command

2: Status of command execution: ref. Table 10-2

3: DATAGRAM FORMAT = 0 (ID,RATE,COUNTER,LATENCY: ref. input parameters in Figure 10-41)

4: CRC-8 calculation

Figure 10-24: Specification and example of \$id command

10.3.15 \$it

Purpose: Provide information about the RS422 transmission parameters

Format: \$id,<CRC><CR> Example of command: \$it,138<CR> Example of response: #it,0,374400,1,E,1,1,39<CR> Explanation of response: 1 : it = command 2: Status of command execution: ref. Table 10-2 3: BIT RATE [bps] = 374400 4: STOP BITS = 1 5: PARITY = E (EVEN (E=EVEN, O=ODD, N=NONE)) 6: LINE TERMINATION = 1 (ON, ref. Table 9-20) 7: DATAGRAM TERMINATION = 1 (<CR><LF>, ref. Table 9-12) 8: CRC-8 calculation Figure 10-25: Specification and example of \$it command

10.3.16 \$igu

Purpose: Provide information about the gyro output unit

Format: \$igu, <crc><cr> Example of command: \$igu,2</cr></crc>	213 <cr></cr>	
Example of response: #igu,0,	1,211 <cr></cr>	
Explanation of response:		
1 : igu = command		
2: Status of command execut	tion: ref. Table 10-2	
3: GYRO OUTPUT UNIT = 1	([°/sample] – INCREMENTAL ANGLE, ref. input parameters in Figure 10-42)	
4: CRC-8 calculation		

10.3.17 \$iau

Purpose: Provide information about the accelerometer output unit

Format: \$iau,<CRC><CR>

Example of command: \$iau,168<CR>

Example of response: #iau,0,1,31<CR>

Explanation of response:

1:iau = command

2: Status of command execution: ref. Table 10-2

3: ACCELEROMETER OUTPUT UNIT = 1 ([m/s/sample] – INCREMENTAL VELOCITY, ref. input parameters in Figure 10-43) 4: CRC-8 calculation

Figure 10-27: Specification and example of \$iau command

10.3.18 \$iiu

Purpose: Provide information about the inclinometer output unit

Format: \$iiu,<CRC><CR>

Example of command: \$iiu,249<CR> Example of response: #iiu,0,0,224<CR>

Explanation of response:

1 : iiu = command

2: Status of command execution: ref. Table 10-2

3: INCLINOMETER OUTPUT UNIT = 0 ([g] - ACCELERATION, ref. input parameters in Figure 10-44)

4: CRC-8 calculation

Figure 10-28: Specification and example of \$iiu command

10.3.19 \$ig

Purpose: Provide information about the configuration of gyro g-compensation for a specified axis

Format: \$	iig, <axis><crc><cr></cr></crc></axis>
Explanati	on of input parameters:
<axis>: S</axis>	pecified axis. Valid entries are:
•	x : X-axis
•	y : Y-axis
•	z : Z-axis
Example	of command: \$ig,x,167 <cr></cr>
Example	of response: #ig,0,X,1,1,2,0,0.500,150 <cr></cr>
Explanati	on of response:
1 : ig = co	ommand
2: Status	of command execution: ref. Table 10-2
3: Axis =	X
4: GYRO	G-COMPENSATION SCALE SOURCE = 1 (ACCELEROMETER, ref. input parameters in Figure 10-45)
5: GYRO	G-COMPENSATION SCALE LP FILTER = 1 (ON, ref. input parameters in Figure 10-45)
6: GYRO	G-COMPENSATION BIAS SOURCE = 2 (INCLINOMETER, ref. input parameters in Figure 10-45)
7: GYRO	G-COMPENSATION BIAS LP FILTER = 0 (OFF, ref. input parameters in Figure 10-45)
8: LP FIL	TER -3dB FREQUENCY [Hz] = 0.500 (ref. input parameters in Figure 10-45)
9: CRC-8	calculation

Figure 10-29: Specification and example of \$ig command

10.3.20 \$iconf

Purpose: Provide information about system configuration

Format: \$iconf,<SystPar>,<CRC><CR>

Explanation of input parameters:

<SystPar>: System parameter. Valid entries are:

- v : Voltage level of digital output
- t : Toggling of TOV for special datagrams after power-on/reset
 - b : Transmission of Bias Trim Offset datagram after power-on/reset

Example of command: \$iconf,t,211<CR> Example of response: #iconf,T,0,43<CR>

Explanation of response:

1: iconf = command

2: Status of command execution: ref. Table 10-2

- 3: SYSTEM PARAMETER = T (Toggling of TOV for special datagrams after power-on/reset, ref. input parameters in Figure 10-46)
- 4: CONFIGURATION = 0 (No active toggling of TOV for special datagrams after power-on/reset, ref. input parameters in Figure 10-46) 5: CRC-8 calculation

Figure 10-30: Specification and example of \$iconf command

10.3.21 \$ie

Purpose: Provide the accumulated extended error information and reset the accumulated error register

Format: \$ie, <crc><cr></cr></crc>
Example of command: \$ie,200 <cr></cr>
Example of response: #ie,0,0,0,16,0,0,0,0,0,0,0,0,0,0,0,0,0,221 <cr></cr>
Explanation of response:
1 : ie = command
2: Status of command execution: ref. Table 10-2
3: EXTENDED ERROR REGISTER, BYTE#1 (MSB) in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
4: EXTENDED ERROR REGISTER, BYTE#2 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
5: EXTENDED ERROR REGISTER, BYTE#3 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
6: EXTENDED ERROR REGISTER, BYTE#4 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
7: EXTENDED ERROR REGISTER, BYTE#5 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
8: EXTENDED ERROR REGISTER, BYTE#6 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
9: EXTENDED ERROR REGISTER, BYTE#7 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
10: EXTENDED ERROR REGISTER, BYTE#8 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
11: EXTENDED ERROR REGISTER, BYTE#9 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
12: EXTENDED ERROR REGISTER, BYTE#10 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
13: EXTENDED ERROR REGISTER, BYTE#11 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
14: EXTENDED ERROR REGISTER, BYTE#12 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
15: EXTENDED ERROR REGISTER, BYTE#13 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
16: EXTENDED ERROR REGISTER, BYTE#14 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
17: EXTENDED ERROR REGISTER, BYTE#15 in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
18: EXTENDED ERROR REGISTER, BYTE#16 (LSB) in EXTENDED ERROR INFORMATION DATAGRAM: ref. Table 5-17 and Table 5-18
19: CRC-8 calculation

Figure 10-31: Specification and example of \$ie command

Note: Reading the extended error information will reset the accumulated error register.

10.3.22 \$save

Purpose: Permanently store all configuration and system parameters to flash memory

· ·	apose. I enhancing store an configuration and system paran
	Format: \$save, <crc><cr></cr></crc>
	Example of command: \$save,33 <cr></cr>
	Example of response: #save,0,9958,175 <cr></cr>
	Explanation of response:
	1: save = command
	2: Status of command execution: ref. Table 10-2
	3. REMAINING NUMBER OF SAVES = 9958

4: CRC-8 calculation

Figure 10-32: Specification and example of \$save command

Note: the parameters will be saved even if remaining number of saves was 0 prior to saving. However, this could eventually lead to quality issues related to the flash memory.

Note: Do not turn off power until the command response has been received

10.3.23 \$isv

Purpose: Provide information about the number of remaining saves

Purpose: Provide information about the number of remaining saves
Format: \$isv, <crc><cr></cr></crc>
Example of command: \$isv,227 <cr></cr>
Example of response: #isv,0,9958,168 <cr></cr>
Explanation of response:
1: isv = command
2: Status of command execution: ref. Table 10-2
3: NUMBER OF REMAINING SAVES = 9958
4: CRC-8 calculation

Figure 10-33: Specification and example of \$isv command

10.3.24 \$xn

Purpose: Terminate Utility Mode and return to Normal Mode

Format: \$xn,<CRC><CR>

Example of command: \$xn,150,<CR>

Example of response: #xn,0,125<CR>

Explanation of response (format):

1: xn = command

2: Status of command execution: ref. Table 10-2

3: CRC-8 calculation

Figure 10-34: Specification and example of \$xn command

10.4 Commands for reconfiguration

General description: Various commands to reconfigure the part.

Note: Use of commands that changes parameters do not permanently store the new values. The updated values will be in effect until the part is powered off or reset. To permanently store the new values, the \$save-command (ref. section 10.3.22) must be used after having updated the required parameters.

able 10-4. Available commands for recomingulation		
	Command	Description
	\$sm	Sets the output sampling rate
	\$sgf	Sets the LP filter -3dB frequency of the gyros

Table 10-4: Available commands for reconfiguration	Table 10-4:	Available	commands	for	reconfiguration
----------------------------------------------------	-------------	-----------	----------	-----	-----------------

\$sm	Sets the output sampling rate	10.4.1
\$sgf	Sets the LP filter -3dB frequency of the gyros	10.4.2
\$saf	Sets the LP filter -3dB frequency of the accelerometers	10.4.3
\$sif	Sets the LP filter -3dB frequency of the inclinometers	10.4.4
\$suf	Sets the LP filter -3dB frequency of the AUX signal	10.4.5
\$saux	Sets the calibration coefficients for AUX-signal	10.4.6
\$sd	Sets the datagram format	10.4.7
\$sgu	Sets the output unit of the gyros	10.4.8
\$sau	Sets the output unit of the accelerometers	10.4.9
\$siu	Sets the output unit of the inclinometers	10.4.10
\$sg	Sets the configuration of the gyro g-compensation	10.4.11
\$sconf	Sets system configuration	10.4.12

10.4.1 \$sm

Purpose: Change the output sampling rate

Format: \$sm,<SamplingRate>,<CRC><CR>

Explanation of input parameters:

<SamplingRate>: Output sampling rate. Valid entries are:

- 0 : 125 samples/s
- 1:250 samples/s
- 2 : 500 samples/s
- 3 : 1000 samples/s
- 4 : 2000 samples/s
- 5 : External Trigger

Example of command: \$sm,4,115<CR> Example of response: #sm,0,4,213<CR>

Explanation of response:

1: sm = command

2: Status of command execution: ref. Table 10-2

3. SAMPLING FREQUENCY = 4 (2000 samples/)

4: CRC-8 calculation

Figure 10-35: Specification and example of \$sm command

Ref. section

10.4.2 \$sgf

Purpose: Change the LP filter -3dB frequency of the gyros

Format: \$sgf,<Axis>,<LP Filter>,<CRC><CR>

Explanation of input parameters:
<axis>: Specified axis. Valid entries are:</axis>
• x : X-axis

- y : Y-axis
- z : Z-axis

<LP Filter>: LP filter -3dB frequency. Valid entries are:

- 0 :16Hz
- 1 : 33Hz
- 2 : 66Hz
- 3 : 131Hz
- 4 : 262Hz

Example of command: \$sgf,x,3,214<CR> Example of response: #sgf,0,X,3,125<CR>

Explanation of response:

1: sgf = command

2: Status of command execution: ref. Table 10-2

3: GYRO LP FILTER -3dB FREQUENCY, X-AXIS = 3 (131Hz)

4: CRC-8 calculation

Figure 10-36: Specification and example of \$sgf command

10.4.3 \$saf

Purpose: Change the LP filter -3dB frequency of the accelerometers
Format: \$saf, <axis>,<lp filter="">,<crc><cr></cr></crc></lp></axis>
Explanation of input parameters:
<axis>: Specified axis. Valid entries are:</axis>
• x : X-axis
• y : Y-axis
• z : Z-axis
<lp filter="">: LP filter -3dB frequency. Valid entries are:</lp>
• 0 :16Hz
• 1:33Hz
• 2:66Hz
• 3:131Hz
• 4 : 262Hz
Example of command: \$saf,z,4,138 <cr></cr>
Example of response: #saf,0,Z,4,43 <cr></cr>
Explanation of response:
1: saf = command
2: Status of command execution: ref. Table 10-2
3: ACCELEROMETER LP FILTER -3dB FREQUENCY, Z-AXIS = 4 (256Hz)
4: CRC-8 calculation
Figure 10.27: Specification and example of \$55f command

Figure 10-37: Specification and example of \$saf command

10.4.4 \$sif

Purpose: Change the LP filter -3dB frequency of the inclinometers

Format: \$sif,<Axis>,<LP Filter>,<CRC><CR>

Explanation of input parameters:
<axis>: Specified axis. Valid entries are:</axis>
• x : X-axis
• y : Y-axis
• z : Z-axis
<lp filter="">: LP filter -3dB frequency. Valid entries are:</lp>
• 0 :16Hz
• 1 : 33Hz

- 2 : 66Hz
- 3 : 131Hz
- 4 : 262Hz

Example of command: \$sif,y,0,217<CR> Example of response: #sif,0,Y,0,132<CR>

Explanation of response:

1: sif = command

- 2: Status of command execution: ref. Table 10-2
- 3: INCLINOMETER LP FILTER -3dB FREQUENCY, Y-AXIS = 0 (16Hz)

4: CRC-8 calculation

Figure 10-38: Specification and example of \$sif command

10.4.5 \$suf

Purpose: Change the LP filter -3dB frequency of the AUX-signal
Format: \$suf, <lp filter="">,<crc><cr></cr></crc></lp>
Explanation of input parameters:
<lp filter="">: LP filter -3dB frequency. Valid entries are:</lp>
• 0 :16Hz
• 1 : 33Hz
• 2 : 66Hz
• 3 : 131Hz
• 4 : 262Hz
Example of command: \$suf,2,196 <cr></cr>
Example of response: #suf,0,2,234 <cr></cr>
Explanation of response:
1: suf = command
2: Status of command execution: ref. Table 10-2
3:AUX LP FILTER -3dB FREQUENCY = 2 (66Hz)
4: CRC-8 calculation
Figure 10.20, Specification and example of Scut command

Figure 10-39: Specification and example of \$suf command

10.4.6 \$saux

Purpose: Change calibration coefficients of the AUX-signal

Format: \$saux,<Acoeff>,<Bcoeff<CRC><CR>

Explanation of input parameters: <acoeff>: Calibration factor for scale-factor, ref. section 7.4 <bcoeff>: Calibration factor for bias, ref. section 7.4</bcoeff></acoeff>
Example of command: \$saux,1.01,-0.008,42 <cr> Example of response: #saux,0,1.0100000,-0.0080000,203<cr></cr></cr>
Explanation of response: 1: saux = command

2: Status of command execution: ref. Table 10-2

3: AUX COMPENSATION COEFFICIENT A [] = 1.010000

4: AUX COMPENSATION COEFFICIENT B [V] = -0.0080000

5: CRC-8 calculation

Figure 10-40: Specification and example of \$saux command

10.4.7 \$sd

Purpose: Change the datagram format Format: \$sd,<DatagramFormat>,<CRC><CR>

Explanation of input parameters:

<DatagramFormat>: Datagram format. Valid entries: ref. Table 9-11

- 0 : ID, rate, counter, latency, CRC
- 1 : ID, rate, acceleration, counter, latency, CRC
- 2 : ID, rate, inclincation, counter, latency, CRC
- 3 : ID, rate, acceleration, inclination, counter, latency, CRC
- 4 : ID, rate, temperature, counter, latency, CRC
- 5 : ID, rate, acceleration, temperature, counter, latency, CRC
- 6 : ID, rate, inclination, temperature, counter, latency, CRC
- 7 : ID, rate, acceleration, inclination, temperature, counter, latency, CRC
- 8 : ID, rate, AUX, counter, latency, CRC
- 9 : ID, rate, acceleration, AUX, counter, latency, CRC
- a : ID, rate, inclincation, AUX, counter, latency, CRC
- b : ID, rate, acceleration, inclination, AUX, counter, latency, CRC
- c : ID, rate, temperature, AUX, counter, latency, CRC
- d : ID, rate, acceleration, temperature, AUX, counter, latency, CRC
- e : ID, rate, inclination, temperature, AUX, counter, latency, CRC
- f: ID, rate, acceleration, inclination, temperature, AUX, counter, latency, CRC

Example of command: \$sd,1,148<CR> Example of response: #sd,0,1,242<CR>

Explanation of response:

1: sd = command

- 2: Status of command execution: ref. Table 10-2
- 3: DATAGRAM FORMAT = 1 (ID,RATE,ACCELERATION,COUNTER,LATENCY)

4: CRC-8 calculation

Figure 10-41: Specification and example of \$sd command

10.4.8 \$sgu

Purpose: Change the output unit for gyros

Format: \$sgu,<OutputUnit>,<CRC><CR>

Explanation of input parameters:

<OutputUnit>: Output unit. Valid entries:

- 0 : Angular rate [°/s]
- 1 : Incremental angle [°/sample]
- 2 : Average angular rate [°/s]
- 3 : Integrated angle [°]
- 8 : Angular rate delayed [°/s]
- 9 : Incremental angle delayed [°/sample]
- a : Average angular rate delayed [°/s]
- b : Integrated angle delayed [°]

Example of command: \$sgu,2,111<CR>

Example of response: #sgu,0,2,101<CR>

Explanation of response:

1: sgu = command

2: Status of command execution: ref. Table 10-2

3: GYRO OUTPUT UNIT = [°/s] – AVERAGE ANGULAR ANGLE

4: CRC-8 calculation

Figure 10-42: Specification and example of \$sgu command

10.4.9 \$sau

Purpose: Change the output unit for accelerometers

Format: \$sau,<OutputUnit>,<CRC><CR>

Explanation of input parameters:

<OutputUnit>: Output unit. Valid entries:

- 0 : Acceleration [g]
- 1 : Incremental velocity [m/s/sample]
- 2 : Average acceleration [g]
- 3 : Integrated velocity [gs]

Example of command: \$sau,1,27<CR>

Example of response: #sau,0,1,150<CR>

Explanation of response:

1: sau = command

- 2: Status of command execution: ref. Table 10-2
- 3: ACCELEROMETER OUTPUT UNIT = [m/s/sample] INCREMENTAL VELOCITY

4: CRC-8 calculation

Figure 10-43: Specification and example of \$sau command

10.4.10 \$siu

Purpose: Change the output unit for inclinometers

Format: \$siu,<OutputUnit>,<CRC><CR>

Explanation of input parameters:

<OutputUnit>: Output unit. Valid entries:

- 0 : Acceleration [g]
- 1 : Incremental velocity [m/s/sample]
- 2 : Average acceleration [g]

3 : Integrated velocity [gs]

Example of command: \$siu,0,23<CR>

Example of response: #siu,0,0,105<CR>

Explanation of response:

- 1: siu = command
- 2: Status of command execution: ref. Table 10-2
- 3: INCLINOMETER OUTPUT UNIT = [g] ACCELERATION

4: CRC-8 calculation

Figure 10-44: Specification and example of \$siu command

10.4.11 \$sg

Purpose: Change the configuration of the gyro g-compensation (ref. section 7.5.2.2.6) Format: \$sg,<Axis>,<ScaleSource>, <ScaleFilter>,<BiasSource>,<BiasFilter>,<LPFilter-3dB>,<CRC><CR> Explanation of input parameters: <Axis>: Specified axis. Valid entries are: • x : X-axis y:Y-axis z : Z-axis <ScaleSource>: Source of the gyro scale-factor g-compensation. Valid entries: 0 : None (=OFF) 1 : Accelerometer 2 : Inclinometer <ScaleFilter>: LP filtering of source for gyro scale-factor g-compensation. Valid entries: 0 : OFF • 1 : ON <BiasSource>: Source of the gyro bias g-compensation. Valid entries: 0 : None (=OFF) 1 : Accelerometer 2 : Inclinometer <BiasFilter>: LP filtering of source for gyro bias-factor g-compensation. Valid entries: 0 : OFF 1 : ON <LPFilter-3dB >: LP Filter -3dB frequency for filtering of sources for gyro g-compensation. Valid range: [0.001, 5]Hz. NB: This field must have a number in the valid range, even if both <ScaleFilter> and <BiasFilter> are both turned OFF Example of command: \$sg,x,1,1,2,0,0.5,243<CR> Example of response: #sg,0,X,1,1,2,0,0.500,79<CR> Explanation of response: 1: sg = command2: Status of command execution: ref. Table 10-2 3: AXIS = X 4: GYRO G-COMPENSATION SCALE SOURCE = 1 (ACCELEROMETER) 5: GYRO G-COMPENSATION SCALE LP FILTER = 1 (ON) 6: GYRO G-COMPENSATION BIAS SOURCE = 2 (INCLINOMETER) 7: GYRO G-COMPENSATION BIAS LP FILTER = 0 (OFF) 8: LP FILTER -3dB FREQUENCY [Hz] = 0.500 9: CRC-8 calculation Figure 10-45: Specification and example of \$sg command

10.4.12 \$sconf

Purpose: Change system configuration parameters

Format: \$sconf,<SystPar>,<Config>,<CRC><CR>

Explanation of input parameters:

<SystPar>: System parameter to be configured. Valid entries are:

- v : Voltage level of digital output
- t : Toggling of TOV for special datagrams after power-on/reset
- b : Transmission of Bias Trim Offset datagram after power-on/reset

<Config>: Related configuration to specific system parameter. Valid entries are: For <SystPar> = v:

- 3 : Digital output voltage level = 3.3V
- 5 : Digital output voltage level = 5V

For <SystPar> = t:

- 0 : No active toggling of TOV for special datagrams after power-on/reset
- 1 : Active toggling of TOV for special datagrams after power-on/reset

For <SystPar> = b:

- 0 : No transmission of Bias Trim Offset datagram after power-on/reset
- 1 : Transmission of Bias Trim Offset datagram after power-on/reset

Example of command: \$sconf,v,5,222<CR> Example of response: #sconf,V,5,77<CR>

Explanation of response:

1: sconf = command

- 2: Status of command execution: ref. Table 10-2
- 3: SYSTEM PARAMETER = v (VOLTAGE LEVEL OF DIGITAL OUTPUT)
- 4: CONFIGURATION = 5 (5V)

5: CRC-8 calculation

Figure 10-46: Specification and example of \$sconf command

10.5 Commands for bias trim offset

General description: Various commands related to bias trim offset.

Note: Use of commands that changes parameters do not permanently store the new values. The updated values will be in effect until the part is powered off or reset. To permanently store the new values, the \$save-command (ref. section 10.3.22) must be used after having updated the required parameters.

Table 10-5: Available bias trim offset commands

Command	Description	Ref. section
\$ibto	Returns the bias trim offsets	10.5.1
\$sdbto	Adjusts the bias trim offsets	10.5.2
\$sbto	Programs the bias trim offset(s)	10.5.3
\$irf	Returns the last programmed reference information for bias trim offset	10.5.4
\$srf	Programs the reference information for bias trim offset	10.5.5

10.5.1 \$ibto

Purpose: Provide information about the current bias trim offsets

Format: \$ibto,<CRC><CR>

Example of command: \$ibto,160<CR>

Example of response: #ibto,0.01388,-0.02425,0.01724,-0.036230,0.002872,0.015903,0.0083054,0.0102123,-0.00450326,198<CR>

Explanation of response:

1: ibto = command

2: Status of command execution: ref. Table 10-2

3: GYRO X-AXIS BIAS TRIM OFFSET [°/s] = 0.01388 (number format: decimal number with 5 decimals)

4: GYRO Y-AXIS BIAS TRIM OFFSET [°/s] = -0.02425 (number format: decimal number with 5 decimals)

5: GYRO Z-AXIS BIAS TRIM OFFSET [°/s] = 0.01724 (number format: decimal number with 5 decimals)

6: ACCELEMETER X-AXIS BIAS TRIM OFFSET [g] = -0.036230 (number format: decimal number with 6 decimals)

7: ACCELEMETER Y-AXIS BIAS TRIM OFFSET [g] = 0.002872 (number format: decimal number with 6 decimals)

8: ACCELEMETER Z-AXIS BIAS TRIM OFFSET [g] = 0.015903 (number format: decimal number with 6 decimals)

9: INCLINOMETER X-AXIS BIAS TRIM OFFSET [g] = 0.0083054 (number format: decimal number with 7 decimals)

10: INCLINOMETER Y-AXIS BIAS TRIM OFFSET [g] = 0.0102123 (number format: decimal number with 7 decimals) 11: INCLINOMETER Z-AXIS BIAS TRIM OFFSET [g] = -0.00450326 (number format: decimal number with 7 decimals)

12: CRC-8 calculation

Figure 10-47: Specification and example of \$ibto command

10.5.2 \$sdbto

Purpose: Adjust the bias trim offsets Format: \$sdbto,<Gyro dX>,<Gyro dY>,<Gyro dZ>,<Acc dX>,<Acc dY>,<Acc dZ>,<Inc dX>,<Inc dZ>,<Inc dZ>,<CRC><CR> Explanation of input parameters: <Gyro dX>: Required adjustment in bias trim offset for gyro X-axis [°/s] <Gyro dY>: Required adjustment in bias trim offset for gyro Y-axis [°/s] <Gyro dZ>: Required adjustment in bias trim offset for gyro Z-axis [°/s] <Acc dX>: Required adjustment in bias trim offset for accelerometer X-axis [g] <Acc dY>: Required adjustment in bias trim offset for accelerometer Y-axis [g] <Acc dZ>: Required adjustment in bias trim offset for accelerometer Z-axis [g] <Inc dX>: Required adjustment in bias trim offset for inclinometer X-axis [g] <Inc dY>: Required adjustment in bias trim offset for inclinometer Y-axis [g] <Inc dZ>: Required adjustment in bias trim offset for inclinometer Z-axis [g] Example of command: \$sdbto,0.01388,-0.02425,0.01724,-0.036230,0.002872,0.015903,0.0083054,0.0102123,-0.0045032,41<CR> Example of response: #sdbto,0,0.02311,0.00934,-0.54432,0.089453,0.002666,-0.053422,0.0183432,-0.0134233,-0.0033322,229<CR> Explanation of response: 1: sdbto = command 2: Status of command execution: ref. Table 10-2 3: NEW GYRO X-AXIS BIAS TRIM OFFSET [°/s] = 0.02311 (number format: decimal number with 5 decimals) 4: NEW GYRO Y-AXIS BIAS TRIM OFFSET [°/s] = 0.00934 (number format: decimal number with 5 decimals) 5: NEW GYRO Z-AXIS BIAS TRIM OFFSET [°/s] = -0.54432 (number format: decimal number with 5 decimals) 6: NEW ACCELEROMETER X-AXIS BIAS TRIM OFFSET [g] = 0.089453 (number format: decimal number with 6 decimals) 7: NEW ACCELEROMETER Y-AXIS BIAS TRIM OFFSET [g] = 0.002666 (number format: decimal number with 6 decimals) 8: NEW ACCELEROMETER Z-AXIS BIAS TRIM OFFSET [g] = -0.053422 (number format: decimal number with 6 decimals) 9: NEW INCLINOMETER X-AXIS BIAS TRIM OFFSET [g] = 0.0183432 (number format: decimal number with 7 decimals) 10: NEW INCLINOMETER Y-AXIS BIAS TRIM OFFSET [g] = -0.0134233 (number format: decimal number with 7 decimals) 11: NEW INCLINOMETER Z-AXIS BIAS TRIM OFFSET [g] = -0.0033322 (number format: decimal number with 7 decimals) 12: CRC-8 calculation

Figure 10-48: Specification and example of \$sdbto command

10.5.3 \$sbto

10.5.5	43010
Purpose	e: Program the bias trim offset(s)
Forma	t1: \$sbto, <biastrimoffset>,<crc><cr></cr></crc></biastrimoffset>
Forma	t2: \$sbto, <biastrimoffset>,<sensorcluster>,<crc><cr></cr></crc></sensorcluster></biastrimoffset>
Forma	t3: \$sbto, <biastrimoffset>,<sensorcluster>,<axis> ,<crc><cr></cr></crc></axis></sensorcluster></biastrimoffset>
Explar	nation of input parameters:
<bias< td=""><td>FrimOffset>: New value of bias trim offset [°/s] or [g]</td></bias<>	FrimOffset>: New value of bias trim offset [°/s] or [g]
<sens< td=""><td>orCluster>: Sensor cluster to be programmed. Valid entries are:</td></sens<>	orCluster>: Sensor cluster to be programmed. Valid entries are:
•	g : gyro
•	a : accelerometer
•	i : inclinometer
<axis></axis>	Specific axis to be programmed. Valid entries are:
•	x : X-axis
•	y : Y-axis
•	z : Z-axis
Examp	ole of command using format1: \$sbto,0,165 <cr> (example clears bias trim offset for all axes)</cr>
Examp	ble of response using format1:
#sbto,	0,0.00000,0.00000,0.00000,0.000000,0.000000
Examp	ole of command using format2: \$sbto,0,a,125 <cr> (example clears bias trim offset for all accelerometers)</cr>
Examp	ole of response using format2:
#sbto,	0,0.02311,0.00934,0.54432,0.000000,0.000000,0.000000,0.0183432,0.0134233,0.0033322,181 <cr></cr>
Examp	ole of command using format3: \$sbto,3.4e-03,g,y,128 <cr> (example sets bias trim offset for gyro Y-axis to 0.0034°/s)</cr>
Examp	ble of response using format3:
#sbto,	0,0.02311,0.00340,0.54432,0.089453,0.002666,0.053422,0.0183432,0.0134233,0.0033322,209 <cr></cr>
Explar	nation of response:
1: sbtc	p = command
2: Stat	us of command execution: ref. Table 10-2
3: NEV	V GYRO X-AXIS BIAS TRIM OFFSET [°/s] = 0.02311 (number format: decimal number with 5 decimals)
4: NEV	V GYRO Y-AXIS BIAS TRIM OFFSET [°/s] = 0.00340 (number format: decimal number with 5 decimals)
	V GYRO Z-AXIS BIAS TRIM OFFSET [°/s] = 0.54432 (number format: decimal number with 5 decimals)
	V ACCELEROMETER X-AXIS BIAS TRIM OFFSET [g] = 0.089453 (number format: decimal number with 6 decimals)
	V ACCELEROMETER Y-AXIS BIAS TRIM OFFSET [g] = 0.002666 (number format: decimal number with 6 decimals)
	V ACCELEROMETER Z-AXIS BIAS TRIM OFFSET [g] = 0.053422 (number format: decimal number with 6 decimals)
	W INCLINOMETER X-AXIS BIAS TRIM OFFSET [g] = 0.0183432 (number format: decimal number with 7 decimals)
	W INCLINOMETER Y-AXIS BIAS TRIM OFFSET [g] = 0.0134233 (number format: decimal number with 7 decimals)
	W INCLINOMETER Z-AXIS BIAS TRIM OFFSET [g] = 0.0033322 (number format: decimal number with 7 decimals)
12: CF	RC-8 calculation

Figure 10-49: Specification and example of \$sbto command

10.5.4 \$irf

Example of command: \$irf,223 <cr></cr>	
Example of response: #irf,43638,44 <cr></cr>	
Explanation of response:	
1: irf = command	
2: Status of command execution: ref. Table 10-2	
3: REFERENCE INFORMATION = 43638 (number format: unsigned integer)	
4: CRC-8 calculation	

Purpose: Program the reference info for bias trim offset Format: \$srf,<RefInfo>,<CRC><CR> Explanation of input parameters: <RefInfo>: Reference information (format: 32-bit unsigned integer), e.g. a date code Example of command: \$srf,43638,122<CR> (example shows programming of datecode for "June 22, 2019" (=43638)) Example of response: #srf,0,43638,69<CR> Explanation of response: 1: srf = command 2: Status of command execution: ref. Table 10-2 3. NEW REFERENCE INFORMATION = 43638 4: CRC-8 calculation

Figure 10-51: Specification and example of \$srf command

11 MARKING

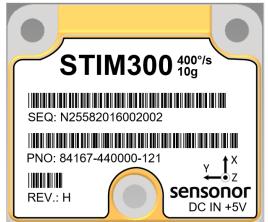

Figure 11-1: Example of marking of STIM300

12 CONFIGURATION / ORDERING INFORMATION

The STIM300 will be delivered according to the configuration code as shown below. All configuration parameters can be changed later in Service Mode or Utility Mode, ref. section 7.5.3 or 7.5.4 respectively. A full list of configurable parameters can be found in Table 5-11.

Configuration parameters in **bold** letters show the standard option.

Range				Meas	urement				0	Output/RS422		
Prod_ID	-	Sample rate	Filter band- width	Gyro output unit	Acc. output unit	Incl. output unit	Gyro g-comp	-	Datagram	Bit-rate	System configuration

- ¹⁾ Delayed gyro output unit should be selected with this option
- ²⁾ USB-based evaluation kit works at bit-rates \leq 1.5Mbit/s + 2Mbit/s and 3Mbits/s
- ³⁾ Bit-rate must be specified. See section 9.5 for limitations
- ⁴⁾ Configuration can be changed in SERVICEMODE. See section 9.5

8 1⁴⁾

None⁴⁾

#Data bits

#Stop bits Parity Example: 84167-413020-330 has the following configuration:

- Gyro range = 400° /s, accelerometer range = 10g
- Sample rate = 2000 samples/s
- Low-pass filter bandwidth = 33Hz
- Gyro output unit = Integrated Angle [°]
- Accelerometer output unit = Acceleration [g]
- Inclinometer output unit = Average Acceleration [g]
 No g-/acc-compensation of bias and scale-factor
- No g-/acc-compensation of bias and scale-factor
 Datagram containing Rate, Acceleration and Inclination
- Bit-rate = 1843200 bits/s
- Datagram Termination = None
- Line termination OFF
- \circ TOV logic high voltage level = 5V
- No active toggling of TOV for special datagrams at start-up
- No transmission of Bias Trim Offset datagram at start-up
